of the lymphatic glands is exceedingly rare. Cancer of the glands usually occurs after cancer of some other part. A man has a cancer of the testicle, and the glands of the groin become affected, or a woman has a cancer of the breast, and the glands in the axilla become involved, but cancer very rarely begins as a primary disease in the lymphatic glands. Still I have seen it occur, even in young children. I remember distinctly a case, which was sent to me several years ago, of a little girl, about seven years old, in whom a lump came under the left ear, and which proved to be a primary sarcoma of the glands; I watched the case throughout its whole course (about nine months); it terminated as a fungus hæmatodes. When cancer does occur in this way, it does not usually affect the glands all over the body; it runs a rapid course and invades adjoining tissues. In this case nine years had elapsed since the appearance of enlargement; there had been a widespread development; the tumors were painless; they had never softened nor undergone suppuration, and they had never invaded the surrounding tissues, but had remained movable. We may then dismiss cancer.

It was not a case of scrofulosis. Scrofulous glands usually, sooner or later, undergo inflammation and suppuration, but here, for nine years, the glands had gone on enlarging, and not one of them showed the least sign of inflammation. Nor has there been a secondary development of tuberculosis, as commonly happens in cases of scrofulosis.

Occasionally syphilis, whether acquired or congenital, gives rise to widespread disease of the lymphatic glands. The history of the condition of this man's father and mother, and of the other members of his family, would not indicate that he had suffered from inherited syphilis. He had neither the notched teeth, the interstitial keratitis, the ozæna, the evidences of cutaneous eruptions, nor the affections of the osseous system, which are so commonly found in inherited syphilis. There was no evidence of acquired syphilis in his history or symptoms. He admitted having had gonorrhœa, and apparently recovered from it. We can hardly suppose that a simple mucous catarrh, lasting but a few weeks, should have any connection with this widespread constitutional disease.

If this has been neither cancer, scrofulosis, nor syphilis, it must have been an instance of that curious disease of the lymphatic system which has been described under the names, leucæmia, Hodgkin's disease, lymphadenoma, and the like. This certainly was not a case of true luecæmia. There are two sets of cases spoken of by this name. In one, the proportion between the white and red corpuscles is greatly increased from the normal of one white to two hundred red, to one to fifty, one to twenty, and one to five, and sometimes, the white globules equal the red. In the second set of cases the white corpuscles do not increase in number, but the red are decreased. This form has been termed pseudo-leucæmia; to this class Trousseau has given the name of lymphadenoma, and Hodgkin, who described it, left his name to distinguish it. The second class seems to be identical with the first in everything except the increase in the number of white corpuscles. This man had no increase in the number of the white corpuscles.

I shall now ask your attention to the specimens before us. This mass, as large as a small fist, was taken from the left groin. It pressed upon and was adherent to the femoral vein, and accounts perfectly for the affection of the left leg. The character of this enlargement is that which we find in leucæmia and pseudo-leucæmia. It is firm. On section it presents a variegated appearance. All the glands along the spinal column were enlarged, and pressed upon the nerves emerging through the vertebral foramina. Possibly they extended through the foramina and pressed upon the cord, but we were unable to determine the exact condition of cord, because we could not obtain permission to examine it.

Here is the spleen, which was the large mass occupying the left hypochondriac region. It is greatly enlarged and the capsule thickened. On section its pulp shows considerable enlargement of the Malpighian bodies, but I do not see any of the white masses so commonly met with in splenic leucæmia. The spleen will often be studded with masses, which careful study show to be aggregations of Malpighian bodies in a state of fatty degeneration.

The liver is also greatly enlarged. It weighs five and a half pounds. There is thickening of the capsule and congestion of the organ, but I do not find any of the little nodules which sometimes result from hyperplasia of the lymphatic follicles within the organ. A small nodule was found at the time of the autopsy, and removed, for microscopical examination.

The kidneys are hardened, and their tissue presents the evidences of chronic congestion. The lining of the pelvis is roughened, and at one point I see a little neoplasm growing from the mucous membrane. This will be removed for microscopical examination.

The heart is not enlarged. The aortic valves are normal; the mitral valve is slightly thickened, but not enough to interfere with its functions. The murmur must then have been chiefly due to the altered state of the blood.

Here, then, is a case in which the history is that of leucæmia, and in which the autopsy shows the same organs, viz., the lymphatic glands, liver and spleen, to be affected as are involved in leucæmia, but in which examination of the blood showed no increase of the white corpuscles. As I have said, there are two forms of leucæmia: true leucæmia, in which the white corpuscles are increased in number, and false leucæmia, in which they are not increased.

This seems to be a case of pseudo-leucæmia, unless the microscopical examination of these glands should show that this is the exceedingly rare affection of sarcoma of the lymphatic glands attended with enlargement of the liver and spleen. It would be extremely rare to have sarcoma occur in a lad in the way this has done, with no pain, with no tendency to invade surrounding tissues, or to suppurate, and lasting for so long a time.

Last winter I showed a case here, in many respects similar to this. It was that of a man covered with lumps. The disease involved the glands of the neck, the axilla, the groin, the ab-

domen, and in addition, they appeared in the subcutaneous tissue everywhere. The skin over these tumors was discolored and adherent, and the swellings were painful. The liver and spleen were not enlarged. As the case advanced paralysis of the legs appeared. At the autopsy, we found that the glands along the spinal column were enlarged and pressed upon the nerves, paralyzing them, and so affecting the nutrition of the cord that structural changes had taken place in it.

The microscope will have to decide whether this has been a case of lymphadenoma or of sarcoma of the lymphatic glands. The clinical history is in favor of the former disease. I shall report to you and show you the drawings of the microscopical appearances of these glands.

NOTE.—The microscopical examination of the glands revealed the lesions of leucæmia.

EDITORIAL DEPARTMENT.

PERISCOPE.

Carbolic Acid and the Carbolates.

The following résumé of the properties and effects (physiological and otherwise) of carbolic acid and its compounds, according to the most recent works on the subject, appeared in the *Progrés Medical*, No. 46, 1882:—

Crystallized carbolic acid is soluble in fifty parts of water (when chemically pure in twenty parts Binz, Hager), and in every proportion in alcohol, ether, chloroform, sulphide of carbon, glycerine.

Absorption is rapid, even through the skin when intact. Elimination is rapid by the skin, lungs and kidneys.

In the urine, when the acid has been introduced in small quantities, a phenol sulphate, nontoxic, is found; when the doses have been large another phenol compound is found (Baumann). The urine is very often of an olive-green or greenish gray color, particularly when the acid has been absorbed through the skin, or through a wound. In some cases, but rarely, albumen has been found. *Principal physiological effects:* In the dose of from five to seven grains it has no toxic effect.

In larger doses, up to thirty grains, it induces excitation, stupefaction, vertigo, ringing in the ears, feebleness, diminution in frequency of the pulse, fall of temperature, colic and diarrhœa. In toxic doses it causes vertigo, delirium, stupor, anæsthesia, analgesia, intermittence and final arrest of heart in diastole; very rarely convulsions, collapse, coma and death. *Counter-poisons:* Sucrate of lime (Huseman), sulphate of soda and the other sulphates (Bausmann), inhalations of oxygen, bleeding, transfusion (Ferrano).

The local effect produced by weak solutions is a sensation of burning, which disappears in the course of half an hour. This is the effect produced by hypodermic injection of Hueter's solution, which contains two per cent. of the pure acid; it gives rise also to ecchymosis of limited extent, but without the formation of an abscess. Hueter employs it in hypodermic injection, to prevent the spread of erysipelatous inflammations to the adjoining skin; five or six injections, of 20 drops each, are made in the skin, just around the part affected, and are repeated a second time the same day; very often the spread of the inflammation is arrested.

Hypodermic injections of carbolic acid have been employed in intermittent fever, by Jessier, Declat, Hueter, Hirschberg; in prurigo, by Rezek and Fleischmann; in diphtheria, by Frotz; in phthisis, by Schnitzler; in crural neuralgia and pleuro-pneumonia, by Hayem and Kunze; in typhoid fever, by Declat; in malignant pustule, charbon, by Raimbert and Meplain (solution, 1 in 50); in nævus, by Badley; in acûte articular rheumatism, by Senator, Kunze and Golbaum.

Borax or Boracic Acid, in Diphtheria.

At a recent meeting of the Clinical Society of London, Dr. Goodhart narrated six cases.

In four a saturated solution of boracic acid in glycerine was used, the application being made in part by a hand-spray, in part by a laryngeal brush, and as often as every two hours, in some cases. In the other two a dilute solution of the glycerinum boracis was used. The first case was a very severe one, and it died from the renal complication on the seventh day, but the boracic acid and glycerine seemed to be so successful in relieving the throat symptoms, and in preventing the re-formation of membrane, that it was determined to try it again. Of the other five, three had "croup," as well as membrane on the fauces; one had nasal diphtheria; all had albuminuria. All recovered. Tracheotomy was necessary in one case, and the glycerinum boracis was freely applied to the interior of the trachea and larynx from the wound, and to the surface of the wound itself, and it seemed to be very beneficial in loosening, dissolving and preventing the re-formation of membrane. In another case it is believed that tracheotomy would have been necessary had not the rigorous application led to the expulsion of membrane by the mouth. In all cases it seemed to give such relief that very little difficulty was experienced in carrying out the treatment. Both borax and boracic acid have been occasionally in use as a topical application in diphtheria, doubtless for a long time past, but not, so far as is known, with any decided success; nor can it be supposed that any remedy will not often show a good proportion of failures in combating a disease such as this. It is enough to say that these agents are known to be good antiseptics, that their action is harmless when not beneficial, and that they are certainly useful in some cases.

Dr. Phillips spoke of two other cases in which glycerinum boracis had been used. It was dis-

covered that glycerine would take up three times as much boracic acid, so that the solution could be made very strong; but this must be diluted once if used in Siegel's spray. Both the cases were *in extremis*, and died, despite tracheotomy, membrane being found post mortem in the smaller bronchi.

Dr. O'Connor had notes of about forty cases of diphtheria. He had sometimes used a saturated watery solution of boracic acid, but without special success. The most favorable results were got from a solution of chlorate of potash. He had never seen a case of diphtheria in which, on removing a piece of membrane once, there was no re-formation, though this new membrane might be thinner and more delicate looking than the first portion.

Dr. Longhurst thought that the great point was to be very careful not to irritate the parts affected. Diphtheria was a constitutional disease, and we could not expect much from local applications. We should rather rely on the powers of nature, and see that the patient had lots of nourishment and fresh air. He considered the boracic spray to be good, because it did not irritate.

The President said that persons who adopted local applications generally extolled their own particular remedy. He could not agree with the last speaker, that local applications were of no great moment. Diphtheria was of a decidedly infectious character, and infection must take place locally, even if the d sease ultimately became constitutional. As an example of the efficacy of boracic acid, which he was the first to introduce into surgery, the power it had of removing the smell of a putrid onychia was instanced. He had found out that glycerine, by the aid of heat, could be made to dissolve almost any amount of boracic acid. He had used such applications to sores of the nasal and buccal mucous membrane, with favorable results. No doubt the glyceride kept the acid longer in contact with the surface on which it was applied, and this was of great value.

Dr. Goodhart replied that the notion that diphtheria was a constitutional disease, was no argument against the use of local applications, for it was frequently enough this local trouble which was the cause of death.

The question having been raised by the President as to what was meant by the term "constitutional," both Drs. Goodhart and Longhurst said they meant a specific poison, circulating throughout the body and producing local effects.

Embolism in the Spinal Cord.

Cases of embolism of the arteries of the spinal cord are so rare, that the following account of an alleged example of the affection, which we abstract from an article reported in the *Wiener Medizinische Wochenschrift* (Nos. 42 and 43), will probably be read with interest. The patient was a boy aged sixteen years, who, up to June, 1879, was apparently in good health. On the 6th of that month, while at work in the stables, he experienced a sharp pain in the thighs, which traveled thence upward toward the gastric region, and backward to the corresponding portion of the back. Paralysis of both lower extremities, of the vesical and rectal functions, and complete cutaneous anæsthesia of both lower extremities and loins, dated from that time, and for three days and nights severe neuralgia affected the lower extremities. According to the mother's account a deep blue discoloration of the skin about the sacral region was to be seen on the first day after the sudden onset of the disease; and after three or four days a slough appeared, which spread in depth and breadth, till, on his entry into the hospital, it was about two hands'-breadth in size, and laid bare the bone. Similar sloughs appeared, in the course of the next two weeks, over each trochanter major. Four weeks after the beginning of the disease the legs were œdematous. The state on admission to the hospital fully confirmed the account of the previous history. The patient was much wasted and anæmic; there was no sign of cardiac disease. There was no excurvation or irregularity of the vertebral spinous processes, *i. e.*, no sign of disease of the spine. The muscles of the arms were much wasted; both the biceps muscles were tolerably strongly contracted, but with this exception there was no real impairment of movements in the upper parts of the body. Anæsthesia of the lower limbs existed in front as high as Poupart's ligaments; behind, as high as the last ribs. The muscles of the lower limbs were absolutely paralyzed and completely atrophied. The patient could not sit up. No plantar or knee "reflexes" could be got. The urine, which flowed away continually, was cloudy, alkaline, ammoniacal, and contained a trace of albumen, with a sediment of epithelial pus-cells and crystals of triple phosphate. There was no spontaneous action of the bowels.

There was but one rigor, on October 14th, 1879—temperature then 106.5° Fahr.—otherwise there was continued fever, fluctuating between 100.5° and 104° Fahr. Death ensued on October 18th.

At the autopsy some areas of softening in the cortex and underlying white matter of the cerebrum, mostly about the size of a pea, were seen; the whole of the lumbar region of the spinal cord was soft and almost fluid; in both these situations Gluge's corpuscles were found, and the vessels were plugged with tough fibrin. The kidneys were diseased, and there were signs of old infarcts in them. The spleen showed some recent hemorrhagic infarcts. There were vegetations on both flaps of the mitral valve.

The diagnosis of the case during life was one of extreme difficulty. Dr. Weiss, under whose care the patient was, passed carefully in review the causes which would explain the symptoms. Acute myelitis, hemorrhage within or without the spinal cord, embolism of the spinal arteries, successively presented themselves for consideration. Against the notion of embolism was the circumstance that no sign of heart disease was discovered during life. That thrombosis of the vessels existed there can be no reasonable doubt, but it must be a question, considered theoretically and scientifically, whether the plugging of vessels observed was primary or secondary. The fact that large granular cells—so-called inflammatory corpuscles—were found in the softened

tissues is held to be sufficient evidence that the *ramollissement* was a real pathological one. The presumption, it is fair to admit, is greatly in favor of the notion that the case is one of embolism, seeing that evidences of that process existed in the kidneys and spleen, and probably also in the brain.

Severe Injury to Pelvis and Right Kidney.

Mr. Harry Lupton reports the following case in the *Lancet*.

A man aged 69 was run over by a timber wagon, loaded to some three tons; the wheel passed between his legs, went over his pelvis and over the body above the left ilium. On admission to hospital (three hours after injury) he was suffering from shock, pulse small and weak, extremities cold, bathed in cold sweat; chief pain referred to ramus of left pubic bone. Vomiting continued until the next morning. The vomit consisted of a dark, bloody fluid, in small quantities at a time. He had passed water about an hour before the accident, and had no desire to micturate since. Although there was no history of previous stricture, a catheter could not be passed. The patient was supported with brandy and beef tea. The next day there was still retention of urine and no evidence of distended bladder; no odor of urine in breath, and no coma. On the night of the second day the scrotum became so much swollen that a number of punctures were made, from which a considerable amount of blood-stained serum drained away. He became weaker; temperature slightly below normal; perfectly conscious; no evidences of peritonitis at any time; had hiccough, and at 3.30 A.M. on the third day after admission nausea and vomiting returned, and at 5 A.M. he died. The autopsy revealed a collection of serous fluid, distinctly not urine and free from the slightest urinary odor, below the visceral fold of the peritoneum. The pubic bones were separated (not fractured) at the symphysis, for about 2½ inches. The whole of the fundus and anterior wall of the bladder had simply "gone;" about 2½ square inches of the posterior wall was all that remained of the organ. The left kidney was uninjured, the right was deeply bruised and its supra-renal body crushed and torn. The man must have been mistaken about the direction taken by the wheel. In this case there must have been absolute suspension of the renal functions for nearly three days.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——In a reprint of a paper read before the Illinois State Medical Society, Dr. Edward W. Jenks, of Chicago, gives a critical review of the advance of surgical gynecology in 1881. It is a careful epitome of this branch.

——A description of a case of dermoid cyst of the orbit appears in a reprint of a paper, by Dr. Henry Y. Cornwell, of Columbus, Ohio. It is accompanied by a wood-cut of the face, showing the deformity.

——Dr. Alfred K. Hills, of New York, has sent us a reprint of an article "On the Therapeutic Use of Alcohol." He writes from the homœopathic point of view, but does not limit his doses to those usually prescribed by that school. He thinks it is a valuable therapeutic agent in many diseases. We rarely can give our hearty assent to homœopathic therapeutics, but when Dr. Hills says, of Tendency to Suicide, that "*Aurum* is an excellent remedy for this mental condition," we entirely coincide; only, instead of infinitesimal doses, we think United States double eagles, *ad lib.*, would generally prove more successful.

BOOK NOTICES.

A Treatise on the Practice of Medicine for the Use of Students and Practitioners. By Roberts Bartholow, M.D., LL.D., etc. Third edition, revised and enlarged. New York: D. Appleton & Co., pp. 918.

The popularity of Dr. Bartholow's work has been such as to prove that in the plan of its preparation he has suited the wishes of a large part of the American profession. The wide reading of the author has been supplemented by an extensive clinical experience, and he has the ability to present the results of both in a clear and attractive style. Moreover, he has a quick eye for the novelties in medical art; he appreciates the ardent thirst for improved methods of treatment, and the earnest desire for prompt and positive successes, which are characteristic of the better class of American physicians. These traits he understands and addresses, and hence his book is one which is willingly read.

The present edition is larger, by about fifty pages, than the previous one, and the text has received a general revision. A few points have occurred to us, in looking over its pages, which still require expansion. Nothing is said, for instance, of the remote sequelæ of sunstroke, a subject of considerable importance. The later researches on dengue are not noticed, though several valuable contributions to our knowledge of this disease have been made within the last two years.

There are not many such lacunæ. As a rule, the reader will find what he looks for, and the later as well as the standard views of disease and its treatment are judiciously presented. We have no doubt the volume will continue to enjoy its popularity, and it merits its success.

THE

Medical and Surgical Reporter,

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., JOSEPH F. EDWARDS, M.D., } EDITORS.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Quarterly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**6.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**7.00**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

THE QUARTERLY COMPENDIUM

OF

MEDICAL SCIENCE.

After Jan. 1st, 1883, the COMPENDIUM OF MEDICAL SCIENCE, formerly published half yearly, will be commenced as a *quarterly*, to be issued on the 1st of January, April, July, and October.

It is especially adapted to be taken with the REPORTER, as few or none of the articles in it appear in our weekly journal.

The price of subscription remains the same, $2.50 per year. But as a special inducement to subscribers to the REPORTER to take the COMPENDIUM also, we offer the two journals at the very low price of

SIX DOLLARS,

when paid for strictly in advance and directly to this office.

MARSH FEVER IN ATHENS.

In a paper read by Prof. Caramitzas at the Athens Congress, he states that that capital suffers much from marsh fever. Thus, among the 34,471 cases of disease treated at the Athens Polyclinic during 1860–70, there were 10,373 cases of marsh fever. This statement recalls to mind the fact that the indefinite disease called malaria, marsh fever, and the like is, in our day, particularly prevalent in cities that have been in times long gone, centuries ago, great centres of population, where hundreds of thousands, yes millions of human beings have lived and died. Witness, for instance, Rome, the hotbed of so-called malarial diseases. The practical hint to be derived from this fact is possibly a significant one. Would it not be well for our searchers after the cause of these indefinite diseases to direct their researches so as to determine whether the results of the decomposition of the body of man may not have more to do with their production than is at present accredited to it? The researches that have been so far made on the cause of *malaria* have been so unsatisfactory that none of them now receive the approval of the universal profession.

May this not be due to the fact that we look in the wrong direction for our solution? If it required many hundreds or thousands of years for nature to accumulate the geological formations that exist to-day, may it not be that in thousands of years she has so influenced the soil under her control that she has, by certain chemical changes, so impregnated it with the results of human decay that, when exposed to the air inspired by human beings, it may cause these indefinite diseases?

The fact that these morbid conditions are so prevalent in the class of localities referred to, would seem to lend some force to this idea.

Of course, we realize that in the economy of nature, human decay furnishes vegetable life, and so the cycle of interchange is maintained.

But where we find this so-called marsh fever most prevalent, as in the Roman Campagnas, we also observe that the process of human decay far exceeds the vegetable production. A barren

waste, once thickly populated and therefore naturally saturated with the products of human decay, is now comparatively uninhabited.

There is not a proportionate *vegetable* demand for the *animal* refuse; some of it remains, and in time, undergoing changes about which we are yet ignorant, produces a condition of the soil favorable for emanations, under certain undefined atmospheric conditions, which are capable of producing the so-called malarial or marsh fevers.

We know full well that decomposing organic matter in the vicinity of human beings will produce that indefinite condition of ill health to which some physicians are so fond of applying the term "*malaria.*" Why may not, then, these same agencies, in the course of time, have evolved such conditions as to cause more definite phases of disease in those who inspire the atmosphere contaminated by emanations from such a soil.

The practical point we desire to suggest is, whether it would not be productive of more practical good for our original investigators to direct their researches toward the influence in producing disease that may be exerted by the changes in the soil produced by the remaining in it for centuries of decomposing human bodies.

May not our various specific diseases be made epidemic every now and then by some such cause? If an epidemic of smallpox gives to the soil a manure of smallpox patients, may not the soil, in time, give back to its consumers a crop of the disease? Who can say positively to the contrary? Every once in a while, long interred bodies are exhumed, as when the encroachments of a city or other reasons necessitate the removal of a cemetery.

Since we have no law against vivisection in this country, might it not be possible that some valuable results could be obtained by utilizing some of the remnants of these long dead bodies, and the soil surrounding such, in inoculating animals.

We know that those dead of certain diseases retain their power of infection for some time; do we know that this mysterious power may not be communicated to the surrounding earth, and thus constitute a latent source of epidemics, ready to spring into activity on some suitable provocation? May not the habit of cremation, prevalent in Rome in early times, have had for one object of its institution the idea that bodies dead of disease were capable of transmitting disease through the soil to the living, and that by *burning* such power was destroyed?

All that we have said is, of course, only theory, but it is a theory worthy of consideration.

So far we have been on the wrong track, we fear, in our minute investigation of the etiology of specific diseases, as evidenced by the fact that we have no more positive knowledge than our forefathers possessed.

The most plausible theory of the causation of acute specific disease is that based on chemistry, and with such our suggestions are entirely compatible.

MEDICAL MALPRACTICE.

From the daily press we learn that in the Supreme Court, on November 27th, an opinion of Justice Sterrett was filed, reversing the judgment of the Common Pleas Court of Susquehanna county, in the case of Charles E. Gere against Umstead & Bailey.

The defendants were partners in the practice of medicine and surgery, and in January, 1879, they undertook to treat Mr. Gere for a compound fracture of one of his legs. Gere had sustained a serious injury, by reason of having been run over by a loaded wagon. The doctors attended him continually for about ten weeks, and were then discharged. The limb was saved, but in such a shortened and deformed condition as to partially deprive Gere of its use. Gere then sued the doctors, claiming that they were negligent and unskillful in the treatment of the injured limb, and that, for this reason, it was not as fully restored as it should have been, while he also claimed that his personal suffering was unnecessarily increased. During the trial the injured limb was shown to the jury, and testimony concerning its treatment was rendered by numerous physicians. The jury rendered a verdict

against the doctors, but they appealed to the Supreme Court, claiming that the cross examination of a certain doctor who was called as an expert was not properly conducted. The Supreme Court sustained the appeal of the doctors and reversed the judgment of the Lower Court.

It gives us pleasure to record this act of justice to our profession.

The public are altogether too ready to institute suits for mal-practice, and unfortunately we have some mean, sneaking curs in our ranks, who are all too ready to instigate the same.

It is a well known fact, stated by all authorities, that in compound fractures, shortening and deformity will sometimes occur, in spite of the most skillful treatment, and, in fact, such cases, with subsequent suits at law for damages, have occurred in the experience of the most eminent surgeons of this country.

When a high court of law sees fit to acquit a surgeon of such a grave charge the damage done to his character is but half repaired. The mis led or wilfully vindictive prosecutor or plaintiff should in some way publicly be censured, in order that the community that has heretofore placed confidence in this particular surgeon may have their wavering faith made once more firm, not only by a mere acquittal of actual mal-practice, but by a condemnation of the mean spirit of want of appreciation of services rendered which this growing evil of mal-practice suits shows to be so rife.

MR. SEYMOUR HADEN ON AMERICAN PHYSICAL DEGENERACY.

In a recent issue we had occasion to animadvert rather severely upon what we considered to be a hastily and erroneously formed opinion of Mr. Herbert Spencer, concerning the physical deterioration of Americans. We are glad to see that another of our distinguished English visitors, one who, by virtue of his profession, is probably better calculated to form a trustworthy opinion than the great philosopher, has reached a different conclusion.

Mr. Seymour Haden is a distinguished English surgeon who, by devoting his spare time to the pursuit of art, has come to be recognized, the world over, as the finest etcher of modern times. He, too, was dined and wined by the Lotos Club, in New York. During the course of his after-dinner speech he took occasion to refer to Mr. Spencer's address, at Delmonico's, and said:—

"Strange to say, that very reputation for energy which has been found fault with by Herbert Spencer, has been a great attraction for me, in the visit which I am now paying you. I only wish that we had a great deal more of it on our side of the Atlantic. I disagree *in toto* with Mr. Herbert Spencer. It has been my business and my pleasure to see the effect of work, and to judge of it, and I can honestly say that I never saw, in all my professional career, the least injury to life or health result from what Mr. Spencer calls overwork. Only the other day, just before I left England, I was met in consultation by one of the most eminent physicians in London, Sir William Gull. The case before us was that of a man who was said to be suffering from overwork. I asked Sir William Gull if he had ever met with a case of mischief or injury arising from this cause, and he said he had not. So for once, at least, the doctors agreed."

Notes and Comments.

Decolorization of Hair Associated with Neuralgia.

The *Medical Times and Gazette* says that M. Raymond relates the case of a lady of 38, who was suffering from neuralgia of the scalp. After suffering several days the pain became much worse one evening, and morphia was powerless to relieve it. At two o'clock the next morning the pain was at its worst. At this moment the hair had its normal color; at seven o'clock the same morning it was found that her hair was almost completely decolorized." It is remarkable that at first the greater part of the patient's hair became red, turning to white a few days later; and later still, falling off in considerable proportion. The case affords an absolute contradiction to Kaposi's theoretical view that blanching of the hair can never take place very rapidly, but *must* require several weeks for its completion.

Borax in Epilepsy.

Dr. Stewart Lockie reports, in the *British Medical Journal*, the case of a boy of seventeen who had been subject to epileptic seizures for four years. At the time of admission to hospital they occurred about once a week. Bromide of potassium seemed to have some slight controlling influence at first, but the frequency soon re-

appeared. On Nov. 28th, 1881, borax, in fifteen-grain doses three times daily, was substituted for the bromide, and it has been continued, with an intermission of nine days, during which the bromide was renewed, to this date (Oct. 21, 1882.) From the time it was commenced no serious fit has occurred, and for the last six months he has had no seizure whatsoever. No skin eruption occurred; vomiting took place occasionally, if the medicine was taken before meals, and at one period he complained of sleeplessness.

Rheumatic Nodes.

It has been a very doubtful question whether rheumatic affections are capable of producing nodes. The various systems of surgery are remarkably reticent on the subject. The case recently reported in the *British Medical Journal*, by Dr. George Mahomed, will therefore prove a valuable contribution to the literature of this subject. In a single woman, aged 54, who was much crippled by subacute rheumatism, he noticed on the inner surface of the right tibia, about two inches above the ankle-joint, a vaguely defined, doughy swelling, tender to touch, which was always more painful at night. That the swelling was not due to syphilis was inferred from the facts: 1. Of an intimate acquaintance with her history, and, 2. That it did not improve under specific treatment.

Treatment of Neglected Sprains.

Dr. H. A. Latimer, in the *British Medical Journal*, reports the case of a man suffering from an old sprain of the ankle, of fourteen years' duration. Owing to its being painful, he saved the affected foot and leg as much as possible, resting his weight, when standing, principally on the sound foot. To such an extent did he do this that the muscles of the affected limb commenced to atrophy. Forcible flexion and extension of the joint was made; it was painted with iodine, ammonia liniment was rubbed in daily, electricity twice a week, and he was ordered to use the limb as much as possible. In three weeks time a perfect cure resulted, which has been permanent.

Congenital Absence of Kidney.

The *Medical Times and Gazette* says that Dr. Turbin, of Tiflis, records the congenital absence of the left kidney in a man 60 years old. The ureter on same side was absent. The author was able to gather only 8 cases; in 5 the left and in 3 the right was wanting.

Apparatus for the Treatment of Pelvic Cellulitis.

Acting on the principle taught by surgery, that the best way to produce absorption is by compression, Dr. Pallen described his apparatus for producing compression in pelvic cellulitis, at a recent meeting of the Obstetrical Society of New York (*Am. Jour. Obst.*): The instrument consists of a double water bag, made of rubber, to rest over and below the iliac fossa on either side, and admitting of the use of a greater or less amount of hot water pressure, according as the case might indicate. Counter-pressure could be made from within and below by the introduction of soft clay into the vagina with the patient in the genu pectoral posture. He had treated seven cases by this method, and the result in two had been very satisfactory. Of the other patients, two did not carry out the directions, two were still under observation, and one had been only five days under the remedies.

Pilocarpin in Polyuria.

In a recent memoir (*These de Paris*), M. Dugroux asserts that pilocarpin by hypodermic injection, in the dose of one-sixth to one-third of a grain, has proven successful in some forms of polyuria.

It brought about complete cure in two cases of azoturic polyuria, the one essential and the other symptomatic of interstitial nephritis; in this last case it also caused the disappearance of very marked amblyopia. In two cases of simple polyuria, it caused a notable amelioration of the general symptoms.

It proved unsuccessful in a case of polyuria in chronic saturnine poisoning, in a chronic case of simple polyuria, and in a case occurring to a patient in an advanced state of scrofulous cachexia.

A Tack in the Ear.

Dr. Edward Haughton reports the following case in the *Lancet*:—

A lady consulted me for deafness and occasional throbbing in the right ear, and on examination with the ear speculum I found a black mass on the bottom of the meatus. Being firmly imbedded in a mass of clotted blood, wax and cotton-wool, it resisted all attempts at removal by the use of a large syringe and hot water; but by the aid of a small artery forceps and a short hook, set in a handle, I succeeded in extracting a carpet-tack, head foremost. As the mass completely plugged up the meatus (in which it had been for years), it was very difficult to extract. She now hears perfectly.

Boro-Glyceride.

Boro-glyceride, which has been so highly lauded in England as an antiseptic, and has been recommended as an application to indolent syphilitic ulcerations, is prepared as follows:—

Glycerine is heated to a high temperature, and boracic acid is added as long as it dissolves, the proportion being ninety-two parts of glycerine to sixty-two of boracic acid. When this is allowed to get cold, a white crystalline compound is formed, which disappears on further heating. Water is evolved during the whole of the operation, and at last, when the steam ceases to be given off, the mass sets into a hard, ice-like substance, and is found to have lost in weight exactly fifty four parts, which corresponds to the weight of three molecules of water.

Persistent Hiccough.

At a recent meeting of the Saint Louis Medical Society (St. Louis *Medical and Surgical Journal*) Dr. Barrett reported the case of a healthy man, thirty-five years of age, who, with the exception of two or three hours, had been troubled continuously with hiccough for five days. Various remedies had been tried without avail. Several other cases were reported by different members of the Society, in one of which the patient, a healthy man, had been so troubled continuously for ten or twelve years. In view of the annoyance which this trouble gives, and the seeming inefficiency of drugs to control it, any successful results obtained would be valuable.

The Best Material for Ligatures.

In the course of an article on "The Choice of Material for Ligature of Arteries in their Continuity," read in the Surgical Section of the British Medical Association (*Brit. Med. Jour.*), Dr. Bennett May discussed the various kinds of ligatures, and related his experience with them. His conclusions are that stout, common gut, of good quality, improved by long keeping in carbolic oil, is a material for ligature which leaves little or nothing to be desired.

Maggots in Fæces.

A correspondent writes to the *British Medical Journal* that he was called upon to attend a boy, aged 10, who had been out of sorts for some time. He was pale, anæmic, and had a foul breath. He finally passed a scybalous mass of fæces swarming with maggots. A quantity of butter in use in the house was found to contain maggots, and this, no doubt, was the origin.

Vaginal Ovariotomy.

Dr. W. H. Baker reported a case to the Boston Society for Medical Observation (Boston *Medical and Surgical Journal*). The patient was placed in Sims' position, the posterior cul-de-sac opened, and the cyst drawn down to the vaginal incision and opened.

The writer's conclusions were that abdominal ovariotomy was always to be preferred to vaginal, except in the few cases (1) where the cyst is small and the contents bland, so that there will be little danger of any, and especially of septic, matter escaping into the peritoneum; (2) of dermoid cysts small enough to be removed by the vaginal incision without evacuation.

Recovery After a Broken Neck.

Dr. C. Jordison reports the following case in the *Lancet:* A man aged 38 received a fracture of the laminae of the 5th and 6th cervical vertebræ. There resulted almost general paralysis. The treatment consisted in absolute rest. He commenced to regain muscular power in three days; at the end of the sixteenth week he was up and walking about, and at the end of the twenty-fifth week he was riding, driving, rowing and swimming, and with the exception of a slight weakness in the left arm, was perfectly well and strong.

Coma During Menstruation Relieved by Venesection.

Dr. H. Goldthwaite reported the following case to the Obstetrical Society of New York (*Am. Jour. of Obst.*): A woman suffering from uterine retroflexion and version suddenly passed, during menstruation, into a state of coma, without any apparent exciting cause. Various remedies had no effect. Finally venesection was resorted to, when she at once began to regain consciousness, and went on to complete recovery. Examination of the urine gave negative results, and there had been no renal symptoms. She had never before lost consciousness.

Imperfect Development of Genital Organs.

At a recent meeting of the Obstetrical Society of Dublin (*Am. Jour. Obstetrics*), Mr. Horne showed a specimen taken from an eight months' child, which only survived a few minutes after its birth. There was an almost total absence of genital organs, except what appeared to be the rudimentary traces of a penis. There was a complete absence of anus. High up in the child's back there was a small pin-hole, but it did not go deeper than the skin.

Special Reports.

NO. XI.—OPHTHALMOLOGY.

BY CHAS. S. TURNBULL, M.D.

(*Continued from page* 642.)

The Progress of Ophthalmology During the Fourth Quarter of the Year 1881, by H. Magnus, Breslau; C. Horstmann, Berlin; and A. Neiden, Bochum; and others.—*Archiv. Ophthal. vol. xii, No. 2.*

Translated by Dr. F. E. D'Oench, New York.

Javal. *Eclairage électrique au point de vue de l'hygiène de la vue.* Soc. de Mèd. Publ. de l'Hygiène Professionelle. Séance du 26 Oct., 1881. *Progr. Méd.* No. 51. Javal hopes that the use of electric light may become universal. If the necessary precautions are observed, especially in the use of goggles, the eye is not endangered. In place of blue or gray goggles, Fieusal recommends yellow ones, as they absorb the violet rays more completely. Mesmil argues against the electric light.

Reich. *Israelites and Military Service. Med. Zeitung,* No. 9. In fifteen cases, all of them Israelites, a traumatic cataract had been intentionally produced, in order to escape military service.—*Hirchmann.*

Weber. *Examination of the Eyes in the High Schools of Darmstadt.* Appendix to the Medical Report of the Grand-ducal Ministerial Department for the years 1877–80. Darmstadt, 1881.

The author treats the subject very thoroughly, and comes to the following conclusions: 1. In view of the injurious results of poor illumination, the windows, where skylights cannot be introduced, should not extend lower down than the height of the scholars when standing upright; where there are windows already, they should be provided with ground glass up to this height, on the south and west sides, in their entire extent; rooms for drawing and female handiwork should be lighted from above. In view of other demands connected with the question of illumination, a revision of the laws governing the building of schools, based on the principles of hygiene now established, is urgently advised. 2. In view of the attributes of a good school-bench set forth, the introduction of Lickroth's school bench, with a top 50 cm. broad, is to be ordered; for drawing and female handiwork, they should be replaced by other apparatus. 3. In view of the different size of the scholars of the same class, they should receive seats corresponding to their height, as determined at the beginning of each term. 4. In view of the necessity of sufficient ventilation, and the injurious influence of long-continued sitting, and its insufficient neutralization by play, as proved by statistics, instruction should be limited to three quarters of an hour at a time, and the remaining fifteen minutes be devoted to gymnastic exercises, drilling, etc. 5. In view of the injurious influence of poor carriage of the body, the teachers are instructed to see that the distance between eye and work is at least 35 cm., and that there is always the necessary amount of light, to be determined by appropriate trial plates. 6. In view of the injurious influence of poor material, all printed matter not in accordance with the principles established in respect to it should be discarded, also checkered blank-books, plates, models for drawing, printed charts, and too fine needlework. 7. In view of the injurious influence of sewing of all kinds on children not at least ten years old, and in view of the necessity of stricter mental occupation at this age, a complete reform of this instruction is demanded. 8. In view of its mentally as well as physically injurious influence, the present system of penmanship should be replaced by a round-hand form. 9. In view of the unprofitableness of dictation, it should be forbidden from principle, and only allowed for the shortest notes. 10. In view of the necessity of constant medical control over the hygienic postulates of the school.

Dufour. *Transplantation of the Conjunctiva.* Transac. of the Intern. Med. Cong., London, viii. *Rev. Méd. de la Suisse Rom.*, 1881, No. 10, Oct. 15. The human conjunctiva may be replaced by that of the rabbit; also by other mucous membranes. There must be no bleeding of the spot upon which the mucous membrane is transplanted. Great care must be taken in applying the sutures; it is best to insert them into the patch before transplanting it. Dufour did not observe any shrinkage of the transplanted piece of mucous membrane. It is not advisable to use salicylic acid during or after the operation.

Förster. *Some Improvements in the Operation for Senile Cataract. Schlesische Gesellsch. f. Vaterländische Cultur,* Oct. 18, 1881. Breslau, *ärztl. Zeitchr.*, 1881, No. 24, and Rep. on the thirteenth meeting of the Ophth. Soc. at Heidelberg. When the cataract ripens slowly a squint hook, after previously making an iridectomy, should be passed over the cornea several times, pressing and rubbing upon it; the corticalis, being not yet entirely opaque, is thus broken up within the capsule. The capsule should not be opened with the cystotome, but with a fine forceps, as in this way the greater part of the anterior half of the capsule may be removed from

the eye, thus diminishing the danger of subacute iritis, of irido-cyclitis. Carbolic acid for disinfecting the eye or the instruments should be discarded. The instruments, however, should be disinfected in absolute alcohol before the operation. Not much weight is attached to disinfecting bandages.

Brettau. *The Local Application of Iodoform.* Report of the thirteenth meeting of the Ophth. Soc. at Heidelberg, 1881. Iodoform not only seems to cause irritation in diseases of the conjunctiva and cornea, but also seems to diminish the secretion of the conjunctiva, to bring about retrogressive changes in granulations, and to act beneficially in sclerosing keratitis. It is used in form of a powder, or as a salve in equal parts with vaseline.

Carreras-Aragó. *Pilocarpine in Diseases of the Eye. Revista de cienc, Med., de Barcelona.* Report C. f. A., p. 341. Its use is indicated in all affections in which an energetic contraction of the pupil is desired; for instance, in conical ulcers threatening incarceration of the iris. *Success slight in detachment of the retina.*

Josso. Paris, 1881. Doin, 60 pages. Out of sixteen cases, fifteen were successfully treated by subcutaneous injections of pilocarpin. Compare the less favorable results obtained by Carreras-Aragó precisely in regard to this point.

Kauders. *Pilocarpine as an Antidote of Atropine. Wiener Med. Wochenschr.*, 1881, No. 45. Pilocarpine is a speedily acting and sure antidote of atropine.

Krömer. *On the Use of Antiseptic Solutions of Atropine and Eserine. Correspondenzblatt f. Schweizer Aerzte*, 1881, No. 19. Boiling the solutions, and adding boracic acid 4:100 and carbolic acid 1:1000, keeps them clear and free from the development of bacteria.

Königstein. *Notes on the Histology of the Eye. Graefe's Arch.*, Bd. xxvii, 3. 1. The nerves of the sclera. The human sclera has nerves of its own ending within it. 2. The pupillary membrane. It consists of four to five larger blood vessels, forming arches; numerous small blood vessels, coming from the iris and communicating with each other, empty into these arches. The centre of the pupillary membrane is always free from blood vessels. The blood-vessels of the pupillary membrane do not come from the circulus iridis minor, but in conjunction with the blood vessels of the ciliary muscle and ciliary processes from the ciliary blood vessels. The retrogressive change begins toward the end of the 7th or the beginning of the 8th month.

Cahn. *The Physiological and Pathological Chemistry of the Eye. Beitschr. f. Phys. Chemie.* Bd. v. p. 214. The reaction of fresh retina is genrally alkaline; on the external surface sometimes acid. The retina of the ox contained water 86.52; albuminous substances 6.77; substances resembling albumen 1.59; alcohol extract 0.25; aqueous extract 0.42; cholesterine 0.77; fat 3.47; lecithine 2.03; soluble salts 0.93; insoluble salts 0.02; traces of cerebrine. There is no essential difference between the chemical composition of the aqueous humor and the vitreous. The lens consists of globuline. In cataractous lenses a decrease of albumen could be demonstrated, as also the coagulation of a portion of the albumen.

Denissenko. *Investigations on the Nutrition of the Cornea. Virchow's Arch.*, Bd. lxxxvi, 3. 1. The cornea does not draw its nourishment from the anterior chamber (Knies, Ulrich), but from the surrounding blood vessels in the sclera. Therefore, the cornea is nourished in the same manner as every other tissue of the body. 2. Although the blood vessels nourishing the cornea are situated in the sclera, at some distance from the sclero-corneal margin, the nourishing fluid, after leaving them, is conducted through the fibres and fissures of the sclera to the corneal margin, where it enters the lacunar system, and is distributed throughout the entire thickness of the cornea, and then discharged into the anterior chamber. 3. The current does not flow from the centre to the periphery of the cornea (Knies, Ulrich), but from the periphery to the centre (Cohnheim, Szokalski), and not from behind, forward (Knies, Ulrich), but from in front, backward. 4. Therefore, the stomata, which Klebs and others have demonstrated in the epithelium of Descemet's membrane, do not form the commencement of Recklinghausen's lymph spaces for drawing nourishment from the anterior chamber, but serve to discharge the waste products. 5. This shows that the cornea does not draw its sustenance from the anterior chamber, but that, on the contrary, the waste products are discharged into the anterior chamber. 6. It therefore follows that the anterior chamber is an enlarged duct for discharging the aqueous humor. 7. Therefore it may be said that not the anterior chamber nourishes the cornea, but the cornea the anterior chamber.

Schmidt-Rimpler. *The Empiric Theory of Vision. Sitzungsber, der Gesellch. zur Beförderung der ges Naturwissensch. zu Marburg*, 1881, No. 4, Dec. A child, three years old, had forgotten its sight so completely, in consequence of an acquired opacity of the lens, that after being successfully operated, it had to learn to see

again. This is against the view of Dubois-Reymond, according to which the ability to interpret correctly the impressions on the senses is not exactly congenital, but comes suddenly, the child not being taught by experience, in the way assumed by the empiric theory.

Frankhauser. *Examination of the Scholars of the High School at Burgdorf for Color Blindness.* Ann. Rep. of the high school at Burgdorf, at the close of the school year 1880–81. Holmgren's and Pflüger's methods were employed. Stilling's plates are not always reliable, and can, therefore, not be recommended. Red-green blindness was found in 6.2 per cent. out of 177 scholars; 44 made mistakes, though not color blind. It is advised to cultivate the color sense at school; the system of Magnus was used for this purpose, with good results in general.

Lagethschnikoff. *A Rare Case of Elephantiasis Palpebrarum. Med. Uebersicht*, Bd. xv, p. 894. Both lids are very much enlarged; the upper hangs down to the nasal angle. The disease began in early childhood. (Hirchman.)

Mandelstamm. *A Case of Sarcomatous Ectropium*, with some remarks upon Trachoma. *Arch. of Ophth.*, Bd. xxvii, 3, p. 101. From the condition of the ectropionized lids, the author concludes that the tendency of the epithelium of the conjunctiva to become hypertrophic is great, not only when directly exposed to the air, but also when, in consequence of unknown injurious influences (dust, smoke, scrofula, barrack air, etc.), trachoma develops. The hypertrophy of the epithelium, together with the hyperplasia of the adenoid tissue, is of primary importance in trachoma; perhaps the pertinacity of the disease may be ascribed to it. When the hypertrophy has once begun, it can cause, at any time, fresh irritations of the adenoid tissue.

E. Grüning. *Traumatic Ophthalmoplegia. Med. Record*, Nov. 12. All the muscles of the left eye were paralyzed by a blow of the fist. The O. N. showed no alteration with the O. S., but there was total blindness. G. thinks there must have been fracture of the pyramid of the orbit, with laceration of the optic nerve. (Swan M. Burnett.)

C. Higgens. *On Distention of the Frontal Sinuses. Guy's Hosp. Reports*, vol. xxv, 27, 1881. A report of four cases in H.'s practice, with critical remarks and citation of published cases and opinions. In case 1, M., 32, there had been abscess in the same place at age 7, and injury followed by removal of dead bone from same place; age 16, tumor noticed eight months. Case 2. M., 13, no injury, swelling noticed six months. Case 3. F., 19, no injury, tumor eight months. Case 4. M., 36, age 14, was kicked over his eyes; age 29, another injury by iron bar over orbit. Pain in L. supra-orb. region began two years later, together with some ptosis, and pain at pulley of supr. oblique. No swelling till three and-a-half years, after which he first was seen, or five to six years after second injury. All treated by free incision and establishment of an opening from floor of distended sinus into nose; result good in all. Remarking on the difficulty of diagnosis in this disease, H. makes the important, and probably new observation, that the swelling (when it has caused absorption of bone) varies in size at different times of day, being smaller after lying down for some hours; *it always points above the tendo oculi.*—*E. Nettleship.*

Kramosztyk. *A Foreign Body in the Orbit. Gaz. lekarsk*, 1881, p. 76. A man 45 years old was attacked with typhoid fever, shortly after having received a blow from the shaft of a wagon. The whole time he was ill he complained of severe pains in the eyes. Three months later slight blepharospasm developed; the eye was deflected inward considerably. There was a small ulcer at the upper inner margin of the cornea, next to which a foreign body, firmly imbedded, was detected by the probe. It was extracted with difficulty and found to be a piece of wood six cm. long. The canal in which it lay had a smooth cicatricial surface, and bone was exposed. The convergent squint was caused by formation of this canal, which extended inward along the internal rectus muscle. Vision was not perceptibly reduced.—*Hirschmann.*

Jsarkiewicz-Ndko. *Cases of Lesions of the Eye, of Traumatic Origin. Gaz. lek*, 1881. After an insignificant injury an inflammation of the orbital tissue set in, which led to the formation of an abscess. The abscess was opened, and a temporary improvement ensued, though there was soon a relapse. The patient, who went elsewhere, was treated expectantly. Three weeks later a second abscess opened spontaneously, and all the symptoms of disease disappeared. The eye, however, was totally amaurotic, showing atrophy of the optic nerve. It follows, therefore, that in abscesses of the orbit an active, not a waiting, treatment must be adopted at an early date.

Berlin. *A Case of Injury of the Optic Nerve Through Fracture of the Optic Canal. Ber. über de* 13, *Vers. d. Ophth. Ges.*, p. 81. The author observed, at the autopsy of a suicide, a fracture of the optic canal, which had severed

the nerve, not only within the canal, but also within the brain.

J. R. Wolfe. *Aneurism of Orbit (Pulsating Exophthalmus) Following Injury Cured by Ligature of Common Carotid. Lancet*, Dec. 3, 1881, (ii, 945). F., 22; symptoms began three months after a blow on left eye, with pain and beating in the head, slight proptosis and bruit heard in orbit; eight months after injury, proptosis greater; a short, pulsating tumor near inner canthus, with thrill and puffing bruit; pulsation stopped by pressure on parotid; papillitis, with extreme venous engorgement. Vision somewhat defective; ulceration of cornea. Ligature of common carotid by Dr. Foulis, eight and a half months after injury; full antiseptic precautions and catgut ligature. Pulsation stopped and tumor much diminished. S. recovered perfectly and O. D. cleared. Four weeks after operation only slight proptosis (E. Nettleship).

Skrebitzky. *Case of Anophthalmus, with Congenital Cysts in the Lower Lids. Klin. Monatsbl. f. Augenhk.*, B., xix, p. 423. In a child six months old, otherwise healthy, and with a normal skull, the orbit was found absolutely empty. Globular tumors of the size of normal eyes protruded upward beneath mucous membrane of the lower lids; fluctuation was easily perceptible. Either they were cysts of the lower lids or malformed eyes.

Kranhik. *The Cause of the Diseases of the Conjunctiva in the Army. Wratsch*, No. 10, 1881. The causes are insufficient sleep, drill in the sun, too tight cravats and collars, besides bad air in the barracks, and diseases of irritability of the conjunctiva acquired before serving.—*Hirschmann.*

Fialkowsky. *A Case of Papulous Syphilis of the Conjunctiva Bulbi. Wratsch*, No. 5, 1881. After a syphilitic angina and condylomata at the anus, a nodule resembling a phlytænula developed on the conjunctiva of the globe three to four mm. downward and inward from the cornea, which ulcerated on the fourth day, and disappeared without any local treatment after fourteen subcutaneous injections of sublimate (cgrm. per dose).

Mikucki. *Eserine in Keratitis, Medycyna*, 1881. Mikucki recommends the use of eserine in ulcers of the cornea, especially at the periphery, basing his advice on the clinical history of twelve cases.

Kramsztyk. *Neuro-paralytic Keratitis, Medycyna*, 1881. Kramsztyk discusses the identity of the so-called neuro-paralytic keratitis, with other affections of the cornea which occur in severe forms of the disease, when the patients remain unconscious for some length of time, with eyes half open. They are due to the loss of moisture of the cornea.

Gouvêa Hilario (de Rio Janeiro). *Aniridia Congenita of Both Eyes, with Deficiency of the Ciliary Bodies and Anterior Part of the Choroid.* Transact. of Intern. Med. Congr., London, vol. iii, p. 120. Man, 23 years old; complete absence of iris in both eyes; lenses dislocated upward, so that there is an aphakic space at the lower corneal margin. No sign of the presence of ciliary processes, nor of the anterior part of the choroid, while the posterior part is more or less normal, as are also the blood vessels of the retina.

Hänsell. *Experiments in Vaccinating Syphilis upon the Iris and Cornea of the Rabbit. G. A. f. O.*, Bd. xxvii, 3, p. 93. The experiments were made with the thin purulent contents of a gumma which was still intact. On the twenty-fifth day after vaccination iritis set in in both eyes, together with the growth granulamas resp. papules and gummata in the ciliary body. When only the cornea was vaccinated, several small, very vascular nodules developed. The animal died after six months of marasmus. The lungs and liver were infiltrated with small tumors resembling tubercles. The same result ensued in about four weeks, when the secretion from "plaques muquesses," well known for its high infectious power, or from particles of a still intact sclerosis, was used. A characteristic difference between the syphilitic and tuberculous nodules consists in much greater vascularization of the former, and in the tendency of the latter to caseous disintegration. Vaccinating with lupus produced no result whatever.

Hosch. *Primary Sarcoma of the Iris. C. f. a.*, Bd. v. p. 361. It has developed in a person 66 years old, at a spot upon the iris where a pigmentation of a darker brown has existed ever since his youth. The tumor proved to be a pigmented spindle-cell sarcoma, which had not yet touched the choroid and ciliary body. The author assumes with Knapp the probability of a conversion of the normal pigmented hyperplastic tissue in the neoplasm during the later years of life. The newly formed pigment undoubtedly comes from the blood vessels.

Hosch. *A Case of Gumma of the Ciliary Body. C. f. a.*, Bd. v. p. 365. The author adds six cases which were overlooked by Seggel in his bibliography in (*loc. cit.*) Patient 37 years old; 7 months after infection a rapidly growing tumor developed under violent symptoms of inflammation of the iris and choroid, and soon

reached the size of a small cherry. Energetic inunction (120 grms. of blue ointment and one grm. calomel were used daily) gradually reduced the size of the tumor until it finally disappeared entirely.

Masse. *Pearly Tumors of the Iris. Rec. d' Ophth.*, July, August, 1881. After an injury of the eye combined with a penetrating wound of the cornea, sometimes cysts develop upon the iris, sometimes solid tumors. Many intermediate stages exist between these two varieties, the serous translucent cysts and the epithelial pearly tumors. Some cysts are almost entirely solid and filled with fat and epidermis cells; the pearly tumors also contain epithelial cells, fat and crystals of cholesterine. The want of an enveloping membrane in the pearly tumors, which the author doubts, constitutes only an apparent difference. Masse reports a case of a pearly tumor of the iris, observed by himself, which had developed around three lashes; they had entered the anterior chamber through a wound and lay upon the iris. The author has shown, by experiments upon rabbits, that when the lashes are deprived of the bulbs and brought into the anterior chamber, they do not cause the development of tumors of the iris; these are due to the presence of the bulb or small particles of the epidermis or conjunctiva. After introducing a piece of conjunctiva into the anterior chamber a cyst and pearly tumor of the iris developed in the same rabbit.—*Marckwort.*

Rymarkiewicz. *Polycoria in the Left Eye.. Medycyna*, 1881. The normal pupil was somewhat displaced downward and inward. The second pupil was situated slightly upward and outward, was of an oval shape, with a major diameter of two mm.,and a minor of one mm. The pupil of the right eye is slightly dislocated downward.

Priestley-Smith (Sheffield). *Acute Glaucoma Following Concussion, Cured by Eserine. Transact.* of the Ophth. Soc. of the Unit. Kingd. The *Lancet*, No. 25.

Arlt. *Spontaneous Rupture of the Anterior Capsule of a Cataractous Lens. Ber. d. Heidelb. Ophth. Ges.*, 1881, p. 130. A cataract has slowly developed in a myopic woman, 34 years old; seven years earlier detachment of the retina had taken place. The spontaneous rupture of the capsule happened during the night. A linear section was made, and a portion, consisting of cholesterine and fatty lenticular substance, removed. The eye remained good.

Critchett. *Practical Remarks on Cataract. The Ophthalmic Review*, vol. i, Dec. 1881, p. 21. C. divides his subject into two heads: 1. Cataract during its period of formation. 2. Cataract when it has so far arrived at maturity as to justify operative interference. The first of these he discusses under the head of "Preliminary Treatment of Cataract." He thinks we are too apt to treat cataract patients merely as subjects for operation, and that, consequently, they are often led to seek the advice of unscrupulous pretenders, who either promise to remove the opacity or to arrest its progress. He recommends a constant surveillance of the case from the time the opacity is clearly made out. He next considers the question as to how far it is expedient to inform the patient of the existence of the disease during its early stages. He concludes that it is impossible to lay down any hard or fast rule as regards this, for each case must be dealt with, as far as the exercise of judgment will permit, according to its own special requirements. With reference to the question as to what can be done for the patient in the way of palliative treatment, C. speaks of good results being often obtained by the employment of stenopœic glasses, with or without magnifying power. As regards the use of atropine, it is impossible to lay down any rule, but as a matter of policy, he indicates discretion in prescribing it, and insists upon the importance of always ordering a weak solution, and never instilling it into both eyes at once. (Fitzgerald.)

Goldzieher. *Ossification in the Periphery of the Lens.* Ber'd. 13, Heidelb. Ophth. Ges, 1881, p. 155. In a globe enucleated on account of phthisis dolorosa, the anterior surface of the lens was found covered with an osseous capsule. Total detachment of the retina and choroid, due to the contraction of the cyclitic tissue.

Purtscher. *Erythropsia after Traumatic Cataract. C. I. A.*, Bd. v, p. 333. The cataract was absorbed spontaneously and completely. The pupil was perfectly black two and a half months after the injury. V = $\frac{1}{3}$. One morning, five months later, he saw all objects red, and this continued for three days. Two weeks later, after being much heated, the same phenomenon, without any ophthalmoscopic changes. V = $\frac{1}{2}$. Report of a second similar case in senile cataract.

Abadie. *Galvano-puncture in the Treatment of Detachment of the Retina. Soc. de Chir., Séance*, Nov. 30, 1881. *Prog. Méd.*, 1881, No. 49, et *Gaz. Hébd.*, Dec. 9, 1881. Detachment of the retina frequently has a local cause; it is, therefore, open to surgical treatment. Abadie recommends galvano-puncture with a platinum knife for this purpose. The sub-retinal fluid is

allowed to escape through an incision, so that the retina can re-adapt itself. The inflammation which then sets in is supposed to fix the retina in its position. Eight cases were treated; six chronic ones, with transient good results; two cases of limited detachment, with "satisfactory" results. As the tension was permanently reduced in these cases after the operation (perhaps without galvano-puncture, from the detachment.—Reviewer), the author thinks of treating glaucoma in this way (Marckwort).

J. Hutchinson. *On Retinitis Pigmentosa and Allied Affections, as Illustrating the Laws of Heredity. Ophth. Rev.*, vol. 1, Nov., 1881, p. 2. After treating of the disease in general, the author reports his experience in regard to the influence of consanguinity upon the development of retinitis pigmentosa. He possesses the data of twenty-three persons or their families. Eight of these sprang from marriages among relatives, among whom there was no record of a previous case of the kind. Three of these patients were partially or completely deaf. In four of the eight cases, only one person was affected; ten times, more than one member of the family was affected; twice, three children; eight times, two children. In ten cases no consanguinity in the family could be proved by anamnesis, and among these, in five cases, two members of the family were affected. The author thinks that consanguinity is undoubtedly an important factor in the development of ret. pigmentosa, as it is for deaf-mutism and idiocy.

Conduct of Labors Made Tedious by Rigidity of the Soft Parts.

Ed. Med. and Surg. Reporter:—

The tedious case of labor detailed by Dr. Farnham, of Maine (see Reporter, Dec. 2, p. 642), is interesting, because it is a condition of things frequently encountered by the practitioner, and which causes him more or less annoyance, in proportion to his experience in such matters. I am encouraged to make a suggestion in reference to the treatment of similar cases, which, if adopted and acted on, may be valuable in favoring tranquillity of mind in the physician, his patient and her friends, and avail much as to their bodily comfort. I recall just such cases of rigid and undilated os and vagina to which I have been called just at the hour named, bedtime. I remark that "this is a case that requires time and rest; I will give you a medicine that brings repose, and favors rather than retards labor." I thereupon administer a full dose of morphia sulphate, and retire to my rest, either at the patient's residence or at my own home, if not too far away. When I see her again after several hours, perhaps the morning following, I find that the short, infrequent and inefficient pains gave way in a short time to sweet and tranquil repose; and, though the pains are again commencing, the patient is refreshed and in good spirits, and the entire household serene and satisfied. On examining, I find the vagina less rigid, somewhat moist, and the os patulous and softer. I reflect on the situation, and, if the os is but partially dilated, and the structures yielding slowly, I may, if pressed for time elsewhere, repeat the morphia and allow the dilatation to proceed undisturbed. The parturient is tranquillized by the assurance that the time for delivery has not arrived, and that it is vain to attempt hastening it by forced bearing down efforts, or by any other measure. When the os is at length fully dilated, the vagina has also become much more yielding, and the patient has undiminished vigor to second the expulsive efforts of the uterus, by bringing into action the assisting voluntary muscles. If these are inadequate to bring the labor to a close, the woman is then in a good condition to bear the strain of manual or instrumental interference.

I think it may be taken as an axiom, that a labor that is tedious because of rigidity of the parts concerned in the delivery, from the inefficiency of the pains, perhaps by the shortness of the umbilical cord, but which is unaccompanied by hemorrhage, convulsions or other serious complications, need not occasion grave solicitude or cause anxiety about the delivery. A wise regulation of the efforts of nature, seconding them when helpful and discouraging them when fruitless; a careful husbanding of strength, and the confidence inspired by the equipoise and self-reliance of the physician, avail much in bringing about a happy result in all cases of tedious labor.

E. T. Blackwell, M.D.

Paterson, N. J., Dec. 6.

Bovine vs. Human Virus.

Ed. Med. and Surg. Reporter:—

In the light of recent experience and careful observation, it would seem no wide thrust at the truth to say that, since the universal substitution of bovine virus for the humanized, smallpox has assumed a perennial as well as a continental character.

In fact, since that mighty iconoclast, æsthetics, landed upon the American shore, many grand old usages of great practical utility have been wantonly demolished, and replaced by "the latest thing," which, in very many instances, has proved to be not the *very best* thing; so has it been with the above; for since the old mode of vaccination from the human crust has been supplanted by the bovine lymph, the difficulty of producing vaccinia has increased ten-fold. The human family (except, perhaps, a few monopolists), seem naturally averse to protection even from so dire a malady as smallpox, and when there is added to it half to a dozen fruitless attempts at vaccination, they either neglect it after a few trials, or flatly refuse to submit to further efforts. And again, the act of vaccination is so trifling, per se, that the busy

practitioner shuns it whenever he can, and when there is coupled with it the probability of several failures in the same subject, he almost positively ignores it; and, furthermore, the production of cattle lymph has become so much of a trade, and subjected, in many instances, to such adulterations, as to vastly lessen the confidence of the profession, and even the laity, in its efficacy.

May not, then, these agencies have contributed largely to the manifest increase of smallpox during the last decade of years? For most assuredly its persistency and virulency is increasing with each succeeding winter.

When the good old doctor, prior to 1870, carefully selected his crusts from his healthiest subjects, and was called upon to perform the act of primary vaccination, *the probability of failure seldom entered his mind;* but now the converse is the rule, and while engaged in the operation, he always announces that "this may not take; if so, call again, and we will try it over."

As the present custom was largely introduced for the purpose of disarming those ignorant croakers against vaccination, who here and there infest society, and that its failure to do so is proven by the subsequent enactment of statutory laws making it compulsory, would it not be well to return again to the method in vogue some fifteen or twenty years ago? The immunity from human blood poisoning supposed to be enjoyed when bovine virus is used, is more than offset by sequelæ as fatal, if not so terrifying. Granting the possibility of communicating syphilitic virus by vaccination, who among our oldest physicians will affirm that they have ever personally witnessed such a result. Outbreaks of scrofula and of the eczemas, with an occasional convulsion, and sometimes erysipelas and sloughing about the point of inoculation, have, for all time, been the occasional attendants on vaccination: but have not all operators observed the increased malignancy of these attendants since the exclusive adoption of the present mode? While confessing that recent hobbies in vaccination so fully possess society at present as to make it hazardous for a physician to use other than bovine lymph, yet there seems to be an unmistakable tendency among them not to entirely exclude the present mode, but to secure the rehabiliment of the old. "'Tis a consummation devoutly to be wished."

J. H. Grimes, M.D.

Baltimore, Dec. 4th, 1882.

A Rare Case in Practice.

Ed. Med. and Surg. Reporter:—

Not long since I was called in consultation to see a woman said to be sixty-four years of age. On arrival, I was informed she had not had a movement from her bowels for some ten days, and had been vomiting stercoraceous matter, more or less, for three days and nights. Upon examining the abdominal region I found an unusually solid tumor occupying the abdominal cavity, and upon inquiry, was informed that the tumor had been gradually developing for fifteen years. That it had not been painful or given her any particular inconvenience. We believed the tumor had to do with the obstruction of the bowels. Used injections through a long gum-elastic tube, but without any good effect.

She died within a few hours after my visit, and I requested the Doctor, after her death, to get the consent of those interested to permit us to make a post-mortem examination, in order to ascertain the cause of death.

On opening the abdomen the tumor was found to be bony or ossified, and was without any attachments save by a pedicle some four inches in length, attached to the fundus of the uterus. It was a fibroid tumor, having its origin in the walls of the uterus, and as it enlarged it became enucleated. There were about a dozen smaller tumors of the same kind, in size from that of a hen's egg to small marbles; three of which were also enucleated and ossified, and the others in the walls of the womb. The uterine canal was found to be, by measurement, three and a half inches in depth. Sterility had been her condition through life. The large tumor weighed ten pounds. Upon examining the bowels, we found in the colon, about three inches from the ileo-cæcal valve, a perforation about the size of a pea, and the bowel in a high grade of inflammation around it. Some of the contents of the bowels had escaped into the abdominal cavity. The post-mortem examination demonstrated the correctness of our diagnosis of the case, that the tumor had to do with the obstruction of the bowels.

Evidently the tumor had suddenly changed its position in the abdomen by the woman turning over, probably, in bed, and caught the colon between the ossific growth and the spinal column, and so held it until death ensued.

The deposit in the fibroid, by which it had become bone-like, on chemical analysis, was found to be phosphate of lime, with a trace of carbonate of lime.

Is it probable that any other person ever lost their life from such a combination of causes as occurred in this particular case?

Bloomington, Ill. E. K. Crothers, M.D.

Belladonna vs. Opium.

Ed. Med. and Surg. Reporter:—

On the evening of Nov. 5th, 1882, I was called to see Rosa C., an infant, aged 3 months, of Irish parentage, who had taken, by mistake of the mother, a teaspoonful of a cough mixture containing grs. ij morphiæ and ʒ ij tinct. opii camph. to the ounce. It was just six hours before I saw it. The child lay in convulsions, face deep purple, no pulse at wrist, and apparently moribund. I gave no hope of recovery, but by way of experiment, told the mother I would try belladonna. I gave, per anum, 25 drops of Squibb's fluid extract, in a teaspoonful of warm water, expecting but little result; calling in the morning, I was told that at 3 A.M., 9 hours after giving the injection, the child came suddenly out of a deep stupor, and cried lustily for nurse, and the child made a good recovery in three days; *absolutely* nothing was given but the belladonna, except three teaspoonfuls of strong coffee before I saw the case; a clear argument for the antidotal powers of this remedy, in even desperate cases of opium poisoning. H. L. W. Burrill, M.D.

Bridgeport, Nov. 28th, 1882.

News and Miscellany.

The Recent Epidemic of Measles in Iceland.

Previous to 1882 there had been no general epidemic of measles in Iceland since 1846, a period of thirty-six years, which Mr. Charles E. Paterson, who writes about it in the *Edinburgh Medical Journal* for December, considers due to the fact of its isolated position. As evidencing the extreme contagiousness of measles, the following facts are noted. The disease was introduced into Iceland on the second of May last, by an Icelander, who arrived in Reykjavik from Copenhagen. When he landed he was still in the prodromic stage, and was able to go about. On the night of the third the eruption appeared. He and his family were imperfectly isolated. On May 9th and 10th his wife, four children and maid servant were all taken sick. On the 13th a student, who was in his house on the 2d, became affected. The two men servants of the apothecary, who were in his house on the 3d, and were exposed to no other source of infection, were taken ill on the 14th. A litttle girl, playing with his children on the 2d and 3d, carried the infection to a young woman, who became ill on the 18th. About the 22d the school children commenced to sicken, after which the disease spread rapidly, so that by the end of June 1100 out of a population of 2700 were ill, and six to eight deaths occurred daily. In the beginning of July the epidemic was almost over in Reykjavik, but was extending rapidly everywhere throughout the country. Out of a population of 2700 150 died. A prominent physician states that in his section of the country, out of a population of 6000 or 7000, he only knew of two or three individuals who did not take measles. In pregnant women the disease was very serious, and abortion frequently followed. The greatest neglect of all sanitary precautions obtained throughout the epidemic.

If any sanitary skeptic doubts the evil effects of neglect of strict isolation for the prevention of the spread of infectious diseases, he ought to be disabused of his error by this striking instance.

Wilmington (N. C.) Hospitals.

It is pleasant to read, in the North Carolina *Medical Journal*, of the improvements that are gradually taking place in the South, and none can be more heartily applauded than the establishment of well conducted hospitals. Indeed, good hospitals are as ornamental to a city as its handsome churches, libraries and theatres. A more deplorable and disgusting state of affairs cannot be imagined than the smallpox hospital which was forced upon the city of Wilmington, N. C., by the Freedman's Bureau, immediately after the war. To think that nearly a thousand miserable creatures were treated in this foul den, with no windows, huddled together without discrimination as to sex, fed with bread and soup that was actually alive with maggots, is too horrible to contemplate. It would scarcely have seemed inhuman had the torch been applied to this writhing mass of filth and emporium of disease. It was just such places as this that made the South a hotbed of disease after the war, when all was confusion, law and order forgotten, and dissolution held undisputed sway.

The new hospital is a credit to the city and county, and much forethought was shown in selecting a large tract of land for its erection, so that there will be no lack of space for additions and room for convalescing patients to enjoy the fresh air.

Charleston, too, is to have a new hospital, and thus let the good work go on.

A Noteworthy Example.

Mr. A. J. Drexel, the wealthy banker of this city, has sent his check for $5000, to endow a bed in the wing for incurables in the Hospital of the University of Pennsylvania.

This wing has been built through the liberality of Mr. Henry C. Gibson, another of our wealthy citizens. There are now fifteen beds so endowed. This is a noble charity, well worthy of imitation. But recently a wealthy man, who died, left nearly a million dollars to the government, to reduce the public debt; his money would have done much more good if given or left in the way indicated by Mr. Drexel; for the government has more than it requires, while our benevolent institutions are sadly lacking in material wealth.

One of the most praiseworthy efforts of the new Provost of the University, Dr. Pepper, is the unremitting energy he displays in securing the interest of our representative citizens in the University. If his life is spared, about which there is no reason for anxiety, the University will in time, and at no very distant date, assume such a position as to plainly indicate the wisdom of the trustees in their choice.

Exporting a Glacier.

The enormous mountain of ice, the Fonor-Svartisen, in Norway, is about to become, as we read in the *Revue Scientifique*, the object of a rather curious speculation.

It appears that a company of merchants of Berghen have obtained the right to sell it, in blocks, for exportation. A number of blocks have been taken and found of excellent quality, so that a number of vessels are being prepared for exporting it. As the glacier is about 120 miles square, and but two miles distant from the sea, it is probable the enterprise will prove very successful.

Resurrectionists.

Since our last issue, the principals in the crime of *body snatching*, of which we spoke, have been tried and convicted.

Dr. Forbes, the Demonstrator of Anatomy in the Jefferson College, has been arrested, and is under bail for trial at an early day. Public feeling, especially among the colored people, is very strong, as it naturally would be.

The sentence has not yet been passed upon those convicted, but it will be a very light one, as

the law provides only for a fine of $100 or one year's imprisonment, in the discretion of the Court.

Philadelphia County Medical Society Lectures.

Owing to the great crowds which filled the hall of the College of Physicians to overflowing, to hear the lectures of Professor Austin Flint, the concluding lecture (January 13) will be delivered in the amphitheatre of the Jefferson Hospital.

Change of Residence.

The office of the Missouri Vaccine Farm has been removed from Manchester, Mo., to Webster Groves, St. Louis Co., Mo.

Items.

—Smallpox is reported to be ravaging the East African districts north of Delagoa Bay.

—Dr. C. G. Jennings reports two successful cases of tracheotomy in the Detroit *Lancet*, Dec. 13th, 1882.

—The first work exclusively devoted to midwifery was published in 1513, in Latin, by Eucharius Rhodion.

—Dr. Thomas Dwight, formerly Professor of Anatomy at Bowdoin College, will fill the chair in Harvard lately vacated by Dr. Holmes.

—The establishment of the Chair of Midwifery in the University of Edinburgh antedated a similar departure in the University of Paris by a whole century.

—An hexameter from the "Iliad," to allay the gout, and a verse of "Lamentations," to cure the rheumatism, were among the therapeutic resources of the Ancients.

—Dr. J. D. Brumley has been appointed Commandant and Surgeon of the Soldiers' Home, at Newark, in place of the late Dr. A. N. Dougherty.

—Seven of the present eighteen Professors and Lecturers on Midwifery, in England, were at one time students of Professor Sir James Y. Simpson, in the University of Edinburgh.

—The annual report of the Jefferson Medical College Hospital, of this city, for the year ending December 1, states that there were 1303 patients treated in the wards, and 6601 patients in the out-patient department, making a total of 7904 cases of all kinds.

—During the past thirty years the number of insane persons in the Department of the Seine, in France, has multiplied more than sixfold, while the population has increased barely threefold. The estimated expenditure for the Paris asylums for next year is $960,000.

—On the 9th of February, 1726, the Town Council of Edinburgh, who were then the patrons of the University, consented to have the Theory and Practice of Physics and Chemistry taught in the University, and on the same day this institution was authorized to confer degrees in medicine.

—The terrible hurricane which has played such havoc with the buildings at Manilla would seem to have verified the truth of the adage "that is an ill wind that blows no one any good." It is stated that on the first day after the storm not a single case of cholera occurred in the town or the island.

OBITUARY NOTICES.

WM. C. REITER, M.D.,

for many years one of the leading physicians of this city, died on Tuesday morning, Nov. 28th. He was born in this city, graduated at the Jefferson Medical School in Philadelphia, and practiced in Mt. Pleasant until he returned to this city, in 1854. He was a constant student of literature and science, as well as a physician of deservedly high and widely spread reputation.

DR. J. T. UPDEGRAFF,

member of Congress from the Steubenville, Ohio, district, died at his home in Mt. Pleasant, Wednesday evening, Nov. 29th, aged 60 years. He was born in Jefferson County. He studied at Franklin College, graduated at the Medical School of the University of Pennsylvania, attended the medical schools of Edinburgh and Paris, pursued his profession in the county where he was born, was a successful agriculturist, served as a surgeon in the late war, and for ten years has taken an active part in Ohio politics.

DR. J. FORSYTH MEIGS.

On Saturday afternoon, December 16th, at four o'clock, this distinguished physician died.

Dr. Meigs was a son of Professor C. D. Meigs, who, while a member of the faculty of the Jefferson Medical College, sent his son to the University of Pennsylvania, for his education in medicine, by which act he very naturally incurred the displeasure of his Faculty.

Dr. Meigs was born in this city in 1818, and graduated in medicine in 1838.

He soon became a member of the staff of the Pennsylvania Hospital, and, devoting himself in an especial manner to the diseases of children, he rapidly gained a very extensive practice, and an exalted position among the very best people of the city. He was the author of the medical work, "A Practical Treatise on the Diseases of Children." The deceased was a member of the American Philosophical Society, Academy of Natural Sciences, Pathological Society and Obstetrical Society, a consulting physician at the Children's Hospital and a Fellow of the College of Physicians.

MARRIAGES.

DUFFIELD—WALL.—In the Phillips Presbyterian Church, New York, Nov. 21st, by Rev. Thomas G. Wall, assisted by Dr. Duffield, of Princeton, N. J., and Rev. Edward Wall, of Hoboken, N. J., John F. Duffield, M.D., and Margaret Cecil Wall, daughter of Rev. Thomas G. Wall.

MACPHERSON—SWAYNE—At Frankford, this city, November 26, 1882, by the Rev. J. M. Washburn, Dr. J. W. MacPherson, of Philadelphia, and Miss Ada B. Swayne, of Kennett Square, Pa.

ROBERTS—THOMSON.—On Wednesday, Nov. 22d, by the Rev. S. D. McConnell, Dr. A. Sidney Roberts and Carolina Hazlehurst, eldest daughter of Dr. William Thomson, of this city.

THE STANDARD PREPARATION OF IRON.

SOLUTION FERROUS MALATE.

(4 Grains to fluid drachm.)

☞ *A chalybeate that has all the virtues and none of the defects of all the present officinal preparations of iron.*

We have the pleasure and satisfaction of placing in the hands of the profession a preparation of iron for which all the above claims have been verified, both in the laboratory and by the clinical experience of many of the leading physicians of the country.

Solution Ferrous Malate is a proto-compound, the form in which iron is most readily assimilated, and being united with a fruit acid in solution, it is rendered palatable, and does not injure or blacken the enamel of the teeth. It does not constipate, nauseate, produce headache, or any of the other unpleasant effects resulting from the use of the ordinary forms of iron.

The Solution Ferrous Malate forms elegant and clear solutions with dilute Phosphoric Acid, Fowler's Solution, and the vegetable tonics. It is also compatible with, and does not form inky mixtures with, compounds containing tannin, such as the Cinchona preparations, Port Wine, French Brandy, etc. This property cannot be claimed for any ferruginous remedy of the Pharmacopœia.

Sulphocyanide of potash does not strike a deep red color with a ferrous salt, as is the case when it is added to a solution of a ferric salt. Free tannin, however, added to Solution Ferrous Malate will turn it black instantly, as it does all preparations containing iron.

Sold on physicians' prescriptions only. Supplied by Druggists. Send for circulars and sample.

MANUFACTURED ONLY BY

THE AMERICAN PHARMACEUTICAL MANUFACTURING CO.,

Office, N. E. Cor. Tenth and Arch Sts., PHILADELPHIA.

☞ We are also agents for the famous Harris' Faradic and Galvanic Batteries. The finest instruments in the world. They range in price from $15 to $30, according to the number of currents. 1337-1351

LACERATION OF THE CERVIX UTERI AS A CAUSE OF POST-PARTUM HEMORRHAGE, AND OF SECONDARY HEMORRHAGE DURING THE MONTH.

BY S. W. DICKINSON, M.D.,
Marion, Virginia.

Since the appearance of Dr. Emmett's papers in 1869 and 1874, respectively, great and important advances have been made in treating that class of diseases due to laceration of the cervix uteri. This laceration occurs during labor, and while frequently it cannot be said that laceration has taken place in any given case at the time, it is, occasionally, the cause of a condition which requires immediate and prompt attention, and yet one to which our text-books give but little, if any, space. The three following cases, which happened in my practice during the past seven years, will best illustrate my meaning.

Mrs. S., age 27, was delivered of her first child in the fall of 1875. Labor was normal in all respects. My attention was called to the child, and when I returned to the mother I found her bleeding profusely. The usual treatment in *post partum* hemorrhage was resorted to, with partial success, but ever and anon, as the patient came from under the fullest influence of ergot, the hemorrhage increased, although the womb was as hard as a cocoanut, and about the size I was accustomed to find it when fully contracted. By the daily administration of ergot, etc., the hemorrhage was restrained, but not stopped, as she passed daily more or less blood, until on the 28th day after confinement, when I was called to see her, and found her bleeding profusely. I had not made a digital examination since about the eighth day after confinement, when, owing to the relaxed condition of the parts, I could detect nothing wrong. Now, on passing my finger into the os uteri, it passed through, as though there was a rent on one side, almost up to the internal os, and it at once occurred to me that this was the source of the hemorrhage. Withdrawing my hand and taking some exsiccated sulphate of iron on a paper, I covered the end of the index finger of my right hand with it, the blood causing it to stick, and then flexing the finger into the palm of my hand, introduced it to the os as best I could, without touching the vaginal walls. This stopped the hemorrhage at once. Then for a week or more I passed a ball of cotton, through a speculum, up to the lacerated edges, either wet with a saturated solution of sulphate of iron, or with exsiccated sulphate of iron sprinkled on it, as the indications seemed to require. After this I used cotton balls wet in alum water, with a string attached, and taught the patient to introduce and remove them herself. The usual tonics, etc., were, of course, used, also vaginal washes, either disinfectant or astringent, as indicated. Ergot seemed to lessen both hemorrhage and the discharges from cervix, and was freely used. After the hemorrhage was once permanently stopped, my patient recovered rapidly, and is now the mother of several children, nor has she had any uterine disease requiring treatment, the cicatrized surfaces producing no pathological consequences.

Case 2.—Saw Mrs. K. two weeks after con-

finement with twins at eight months. She was attended in labor by another doctor, and did not know it if there had been anything wrong. Had some hemorrhage most of the time since confinement, and had some treatment. On examination I could detect nothing wrong, as cervix was placid and vagina full of clots, ergot and cold applications failing to entirely stop hemorrhage. I saw her again in a few days, and detected a laceration, which I treated essentially as in the above case, and stopped the hemorrhage promptly and finally.

Case 3 is so similar to case just related as to render details unnecessary.

Emmett teaches us that "at least one-half of the ailments among those who have borne children are to be attributed to lacerations of the cervix." Goodell estimates that "one-sixth of the women suffering from uterine trouble have an ununited cervical laceration," and Sir James Y. Simpson thought "laceration of the cervix uteri so common, as to be a reliable sign of labor having occurred." Seeing, then, the frequency of laceration, we need not be surprised at hemorrhage occurring now and then from this source, and in a case of *post-partum* hemorrhage where the womb contracts, and no other organ is injured, and yet hemorrhage continues, I would proceed to treat the case as I did the cases recited above. And, moreover, such is my faith in the sufficiency of uterine contraction to control hemorrhage from the placental site, that I think it possible that many of the cases reported as requiring persulphate of iron, etc., to control post-partum hemorrhage, were cases of laceration of the cervix uteri. The reason hemorrhage is not more frequent from this source, may be accounted for by peculiarities in the distribution of blood vessels in the cervix, and to the lacerations being generally limited in extent. We generally have ulceration of the bowel in typhoid fever; but hemorrhage is the exception, and so it is here. For the causes of laceration, in detail, see Emmett, or Thomas, on "Diseases of Women." Probably precipitated labor, too early evacuation of liquor amnii, and the advice frequently heard in the lying-in-rooms, to "bear down" and pull against the nurse's hand before the head has escaped entirely from the dilating os, cause most cases, especially in first labors.

The diagnosis of laceration by the touch is not easily made until after the cervix has regained, to some extent, its natural proportions, and has to be made before that time by *exclusion*. We can be sure the womb is firmly contracted, that the perineum, vagina, rectum and all contiguous organs are intact, and knowing the frequency of laceration, we may say it is the cause in a given case. The treatment is such as indicated in case first related. After clearing vagina of clots I would use any good styptic directly to the parts, and pass a piece of cotton or a clean sponge with styptic on it, up to the os, and if hemorrhage is considerable, a tampon would be allowable, this being the only condition when it might be allowed in treating post-partum hemorrhage. The dangers are from thrombosis and pyæmia. The first of these may be avoided by not passing the styptic too far into the uterus or to the placental site, and by not putting too much of the styptic on the lacerated edges. Pyæmia may be avoided by removing the styptic dressing before suppuration is induced, and washing out the vagina several times daily with permanganate of potash, or carbolic acid well diluted, and by propping up patient in bed two or three times daily as soon as she is strong enough to bear it, in such a position as will favor the flow of discharges from the womb. The operation of uniting the lacerated edges, as done by Emmett, cannot be performed for eight or ten weeks after confinement, because of the condition of the parts. Besides, the hemorrhage, when it occurs, must be stopped at once, and we have not the time to get together the skilled assistants needed to do the operation, nor would we find the necessary instruments outside of the larger cities.

Hospital Reports.

CITY HOSPITAL, PRAGUE.

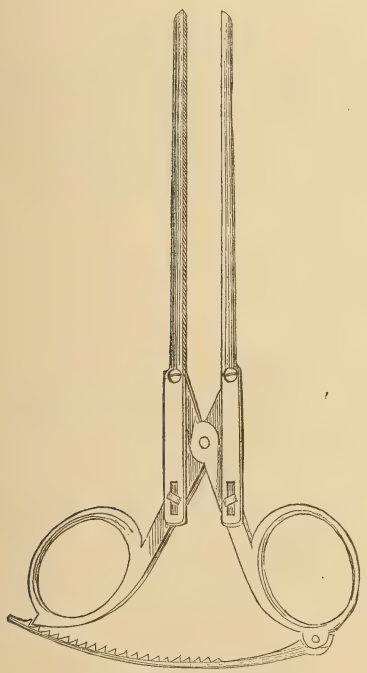
Resection of the Pyloric End of the Stomach.

BY C. GUSSENBAUER,
Professor of Surgery in University of Prague.
Reported by Louis Schwarz, M.D., for the Medical and Surgical Reporter.

Oct. 30th, 1882, M. K., aged 38, female, married, brewery helper, was transferred from the medical clinic of Prof. Pribram to the surgical clinic of Prof. Gussenbauer, with a diagnosis of carcinoma of the pyloric end of the stomach, having a history of three years. Patient was pale, anæmic, with great loss of muscular tissue, complained of vomiting after each meal, severe constipation, and all the symptoms of pyloric stenosis. Externally, to the right of the umbilicus, could be seen and felt a hard, nodular body, quite movable, which measured 14 cm., or $5\frac{2}{3}$ inches in length, and 7 cm. or 3 inches in breadth; also there could be felt a chain of lymph glands, which caused a constriction across the small curvature of the stomach; by dilating the stomach with fluid the tumor descended. Prof. G. said a carcinoma having a three years' history was not one to be selected for an operation, but having examined the patient tho-

roughly and finding the tumor movable, no adhesions, and few glands involved, he said, I am of the opinion that an operation is indicated and will perform the same according to the method described by Prof. Billroth, of Vienna. The temperature of the operating room was 24° R., or 86° F. The thymol spray was used, and all instruments were dipped in carbolized water. Bichloride of ethyl was the anæsthetic used. The abdomen was cleansed with soap, brush and carbolized water. An incision 17 cm., or 7 inches in length, was made in the direction of the median line and linea alba, through skin, superficial fascia, muscular tissue and peritoneum; the bleeding vessels were tied with catgut ligatures. An exploration was then made, to ascertain whether other organs were involved, which was found not to be the case, and the tumor very movable. The operation was then continued. The great omentum was drawn from below over the tumor, several ligatures were placed through different parts of the tumor, especially at the duodenal portion, to prevent hemorrhage and foreign substances escaping into the abdominal cavity. A Gussenbauer clamp was

FIG. 1.



Gussenbauer's Compression Clamp, for Resection of the Pylorus.

placed on the duodenum, to compress it and prevent hemorrhage and foreign substances escaping into the abdominal cavity. He then cut with scissors between the clamp which was on the duodenum and the ligatures which were on the duodenal portion of the tumor; this severed the tumor from the duodenum; the bleeding vessels were tied with catgut ligatures. The omentum was removed from the small curvature of the stomach, similar ligatures were placed through the remaining end of the tumor, that is, the part yet connected with the stomach, two clamps were placed on the non-cancerous portion of the stomach, one from above, the other from below, so that they met and compressed the stomach in a similar manner as before. With scissors he cut again between the clamps and the ligatures; this severed the tumor from the stomach; the bleeding vessels, numbering thirty, were tied as before. The clamps were then taken off, and the anterior and posterior walls of the stomach were brought together by thirty catgut sutures, according to a modified plan of Prof. Gussenbauer. The clamp was taken from the duodenum, and the duodenum was fastened to the remaining portion of the stomach by thirty six circular sutures of catgut. The wound and all adjoining parts were cleansed with sponges dipped in warm carbolized water, the abdominal walls were brought together by fourteen sutures of silk, and Lister's antiseptic dressing applied. The operation lasted three hours; two and a half ounces of the anæsthetic were used, and no foreign substance escaped into the abdominal cavity. An hour after the operation the temperature was 37.5° C. or 99.5° F., pulse 118, resp. 28. Wine and pancreatic beef soup were given per rectum. Evening, temp. 38° C. or 104° F., pulse 124, resp. 30, no vomiting, slight pain in the abdomen, ice in the mouth, morph. hydrochlor., one-fifth gr. Catheter used.

2d day, October 31st, morning temperature 37.5° C. or 99.5° F., pulse 118, respiration 28. Patient slept several hours during the night; slight vomiting; same treatment as before. Evening temperature 37.6° C. or 99.6° F., pulse 130, respiration 30. Catheter used.

3d day, November 1st, morning temperature 37° C. or 98.6° F., pulse 130, respiration 30. Patient doing well, nourishment by the mouth, beef tea in teaspoonful doses every fifteen minutes: rectal nourishment also continued; urine olive-green, containing carbolic acid. Evening temperature 37.6. C. or 99.6° F., pulse 130, respiration 30. Catheter used.

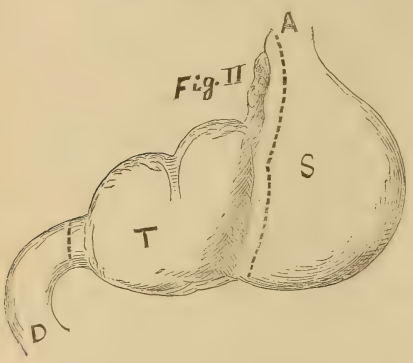
4th day, November 2d, morning temperature 37.4° C. or 99.3° F., pulse 114, respiration 28. Patient doing well, no pain, no vomiting, urine passed without aid of catheter. In the morning received by the mouth milk, at noon beef tea. Dressing was changed, wound doing well, union by the first intention, abdomen sunken, no pain. Evening temperature 37.7° C. or 100° F., pulse 106, respiration 28; rectal nourishment also continued.

5th day, November 3d, morning temperature 37° C. or 98.6° F., pulse 128, respiration 30. Severe pain during the night, patient becoming very weak, pulse small, frequent, compressible, dressing again changed, abdominal sutures removed, wound healing nicely, patient gradually sinking. Evening temperature 37.6° C. or 99.6° F., pulse 136, respiration 30; same treatment.

6th day, November 5th, morning temperature 37.4° C. or 99.3° F., pulse 140, respiration 40. Pulse rapidly sinking; patient failing rapidly; died at noon.

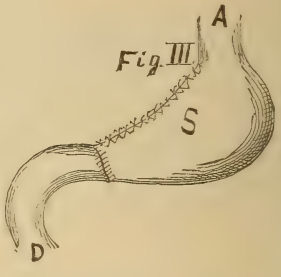
Post-mortem.—Brain and membranes pale and

anæmic; lungs and heart œdematous; heart valves quite normal; abdominal cavity contained about a quart of serum and pus; peritoneum injected with blood and pus; liver and kidneys parenchymatous inflammation; spleen and stomach small; greater curvature of the stomach measured 32 cm. or 13 inches; lesser curvature of the stomach measured 16 cm. or 6½ inches. On the surface of the stomach, where the circular and modified sutures came together, an ulcer was



Stomach Before the Operation.
A. Œsophagus. *S.* Stomach. *D.* Duodenum. *T.* Tumor resected.

found which measured 6 mm. or ¼ of an inch, which was caused by the opening of two sutures, one circular, the other modified; all other sutures were found normal; the opening between the duodenum and stomach was large enough to pass two fingers through; no carcinomatous matter was found, with the exception of a carcinomatous gland on the pancreas. Post-mortem diagnosis, purulent peritonitis. The tumor measured 11½ cm. or 4½ inches in length, 7 cm. or 3 inches in breadth. The duodenal opening of the tumor was very narrow, only allowing the little finger to be passed through. The tumor, which was examined under the microscope by Dr. Pietroikowski, assistant to Prof. G., was found to be a cylinder-celled serous carcinoma, which had grown through all the coats of the stomach.



After the Operation.

Prof. Gussenbauer's modified suture is made by passing the needle through all the tissue except the mucous membrane of the stomach. He claims the wound unites more rapidly and favorably, and does not allow any foreign matter to pass between the parts united by the sutures.

The Treatment of Rheumatism by Blisters.

We have had occasion lately to refer to this question on the affirmative side. We now note the following on the negative side, by Dr. A. B. R. Myers, from the *British Medical Journal*:—

About twenty-five years ago, I had the opportunity of studying the treatment of rheumatic fever by two physicians in the same wards. One of them prescribed opium freely, and the other gave no internal remedies; both had the affected joints carefully enveloped in cotton-wool, as they became attacked, and then firmly bound with flannel bandages, free perspiration being encouraged also by blankets, etc. The result seemed to me to be much the same: that the affected joints rapidly ceased to be painful, and that the patients made, as a rule, a good recovery.

Since that time, my treatment of rheumatic fever has kept very much within those lines (with, in some cases, the addition of salicin); and though I have seen many methods of treatment tried, and much extolled, I cannot say that they have appeared to me to have any special recommendations. But against one treatment I cannot resist, at the present moment, raising my humble protest, viz., the "garter blister," as again advocated by Dr. Davies in the *Journal* of October 28th. When so eminent a physician, with all the authority of long experience of a treatment originated by himself, can still advocate it, he must be very confident of its specially beneficial action, and no doubt must have many followers; but of all treatments (except packing) it is the one which I would not have tried upon myself. I had quite hoped that, long ere this, it had died a natural death. I have seen patients suffer such great discomfort from the raw surfaces of these circular blisters above the knee-joints when other joints have become affected, as to make them beg not to have any more applied. I ask, therefore, why should patients be given this additional suffering as a local treatment, when rapid freedom from pain can almost certainly be obtained by careful bandaging, as above stated; and if it be intended as a constitutional treatment, why choose such a specially painful form of blister as the "garter?"

It is some time since I have been able to watch closely this circular blister treatment; but it made a very decided impression upon me that it did not cut short the attack, and that it was very objectionable, from the patient's point of view.

THE

Medical and Surgical Reporter,

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D.,
JOSEPH F. EDWARDS, M.D., } EDITORS.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Quarterly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**6.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**7.00**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

THE QUARTERLY COMPENDIUM

OF

MEDICAL SCIENCE.

After Jan. 1st, 1883, the COMPENDIUM OF MEDICAL SCIENCE, formerly published half yearly, will be commenced as a *quarterly*, to be issued on the 1st of January, April, July, and October.

It is especially adapted to be taken with the REPORTER, as few or none of the articles in it appear in our weekly journal.

The price of subscription remains the same, $2.50 per year. But as a special inducement to subscribers to the REPORTER to take the COMPENDIUM also, we offer the two journals at the very low price of

SIX DOLLARS,

when paid for strictly in advance and directly to this office.

THE CLOSE OF THE YEAR.

With the present number we bring another year and another volume to a close. In glancing back at the mass of material, culled from such a number of sources, that has been presented to our readers, one cannot escape a feeling of surprise at its amount and diversity.

Never before in the history of science have so many able workers been engaged in pushing the car of knowledge. Never before was there a time when it lay as such an imperative duty of the physician to read and study the new developments of his science.

His aid and assistant in this is the journalist. He it is who culls from the hundreds of volumes, the thousands of journals, that which is new and true, and presents it in compact, comprehensive form. The novel facts, the legitimate deductions from them, these are what the busy professional man wants to learn at the least expenditure of time.

Aware of this, it will be, as it has been, the especial aim of the REPORTER to select and condense, to glean the field and present the grain, and to avoid the introduction of long and theoretical discussions. By following strictly this policy we hope to keep our old friends and make new ones.

CEPHALALGIA OF ADOLESCENCE.

Surgeons have long recognized the relations existing between certain diseases of the bones and adolescence; the child is more subject at this age to tarsalgia, exostosis, epiphysary osteitis, etc. This period of life seems also to have a special influence on the course of acute diseases, and on the development of nervous disorders.

Among these last may be mentioned a form of cephalalgia which attacks young people between the ages of eleven and sixteen years; and which, on account of the intensity of suffering it occasions and its tenacity in certain cases, merits consideration as a distinct morbid entity.

A young boy of eleven or twelve years of age, in general intelligent and learning with facility, suddenly commences to suffer from headache,

which at first is slight and does not prevent the usual application to his studies.

But soon the headache recurs more frequently and the paroxyms last longer, so that it is found necessary to interrupt his studies from time to time. Finally the trouble becomes so persistent and acquires such intensity that any kind of intellectual occupation becomes impossible.

This cephalalgia is always frontal; it never affects the posterior or lateral parts of the head. It is especially characterized by actual pain, which distinguishes it from other neuropathic conditions, such as cerebral paresis of the adult, or vulgar neurasthenia, in which the painful sensations are more vague and localized of preference in the occipital and parietal regions.

In this form of headache suffering is rendered more intense by any attempt at brain work. The patient sleeps well and there is but little pain in the early part of the day if the child is kept perfectly quiet; later on the pain reappears and acquires its maximum of intensity toward evening. This affection is not neuralgic, for there is no pain on pressure along the course of any nerve. The absence of febrile reaction, the absolute integrity of the intellectual functions, and complete cure finally, which occurs in most cases, exclude the idea of any organic affection of the brain.

This affection is frequently of long duration. M. Keller, in his memoir in the *Archives of Neurologie*, cites one case where a young man up to his 25th year was unable to finish his studies, and even at that age, though almost continually in the open air, he was not completely free of his sufferings. Almost every form of treatment has been tried, tonics, nervines, antispasmodics, etc.; the only treatment which has appeared to give rapid and permanent effects is the methodic employment of hydrotherapy.

Notes and Comments.

Nymphomania and Hemorrhoids.

At the late meeting of the Medical Society of the State of Arkansas Dr. William H. Hardison related a case of nymphomania, which caused a respectable young married woman to masturbate and to so deport herself as to cause the greatest family unhappiness. All drugs were powerless to relieve her. It was finally discovered that she was afflicted with very sensitive hemorrhoids, fissure of the anus and constipation. Operation and attention to the bowels so thoroughly relieved her that she almost went to the other extreme.

Nerve Stretching in Sciatica.

The value of nerve stretching in sciatica is a question about which there is great diversity of opinion. In some cases it does do good, in others it is useless. In the *Maryland Medical Journal*, Dr. Randolph Winslow reports a case in which, four months after the operation, the improvement continued. If all other means have proved ineffectual then nerve stretching ought to be tried.

A New Cause of Mercurial Poisoning.

The *Medical Times and Gazette* notes several cases of mercurial poisoning (gums swollen, spongy and tender, with salivation) occurring among men who were employed in exhausting the little globes used in the incandescent system of electric lighting. The poisoning must have been due to mercurial vapor arising from the exhausting pumps, as no mercury was used, except that contained in these pumps.

Special Reports.

NO. XI.—OPHTHALMOLOGY.

BY CHAS. S. TURNBULL, M.D.

(*Concluded from page* 725.)

Retinitis Hæmorrhagica, especially in its Relation with Gout. Med. Times and Gazette, Dec. 10th, 1881, ii, 675. Considerations and conclusions based on twenty-four cases (including the case in Jaeger's Hand Atlas, pl. xiv, fig. 65). Of this number twelve had had gout, five others were probably gouty, and in seven no gouty history was obtained; nine were over 60 years old, none less than 45; thirteen males, eleven females. One eye affected in seventeen; both in seven. Gout probably predisposes to this affection, through the medium of disease of blood vessels, and "an incomplete thrombosis of the vena centralis" is probably the actual cause of the attack, suddenness of onset and asymmetry being in favor of this view. It differs from the relapsing intra-ocular bleeding of young adult males. H. refers to the possible connection of this latter disease, and also of hæmophilia, with gout, by the hereditary transmission of arterial disease.—*E. Nettleship.*

Macheck. *Retinitis Pigmentosa. Przeglad Lek.*, 1881. Of seven children of consanguineous parents, five are affected with ret. pigmentosa hemeralopia, and atrophy of the optic nerve. The other two children (daughters) are well, and their children have normal eyes. Symptoms of hemeralopia first manifested themselves after the tenth year; the only boy became totally blind when eighteen years old, while the sight of the four daughters was still moderately good in their twentieth year. The eyes were mostly myopic, 5 to 9.5 D.; all had nystagmus. The retinal deposits were accompanied in two cases by acute inflammation of the choroid, after strychnine had been tried for a time. Color blindness was observed in three cases; one complete, twice partial.

St. Marenitsch. *Unilateral diffuse syphilitic retinitis*, with complete loss of sight, cured in forty-eight days, by the use of iodine and mercury. *Prot. d. Med. Ges. in Wilna*, 1881, No. 3.—*Hirschmann.*

Mas. *An Interesting Case of Amaurosis Due to Hysteria, La Union de las Ciencias Médicas de Cartagena.* Two successive attacks of amaurosis in consequence of hysterical eclampsia, without any ophthalmoscopic changes, the one lasting five, the other thirty-one days, the amaurosis disappearing suddenly each time. These cases also are open to doubt.

Reid and Hunter. *Embolism of Central Artery of Left Retina.* Glasgow *Medical Journal*, Oct. 1881. An ordinary case of embolism with partial recovery, the important point being the history of numerous attacks of temporary total blindness of same eye, lasting from half an hour to two hours, and usually coming on after severe exertion; at least twelve such attacks occurred in the three months preceding the final "embolism."

Priestley Smith. *Retinitis Pigmentosa, Connected with a History of Maternal Shock. The Ophthalmic Review*, vol. i, Dec., 1881, p. 30. In the history recorded by S. there was no constitutional nerve disorder in the earlier generations, and no consanguineous marriage. The mother of the cases he relates had borne two healthy children. She suffered a severe nervous shock during the earlier months of the third pregnancy; the child, and all the subsequent children, excepting one which died in infancy, developed retinitis pigmentosa with partial deaf-mutism.—*Fitzgerald.*

Unterharnscheidt. *The Development of Detachment of the Retina in Myopia. Berl. Klin. Wochenschr.*, No. 40, 1881, p. 585. The author concludes: If the ciliary muscle is suddenly relaxed when powerfully contracted (especially when wrong glasses are used or objects are brought excessively near), a reduction of the tension of the vitreous body ensues, which for the moment is considerable, and which cannot always be compensated for by a corresponding contraction of the eyeball, because the increased tension, the bulging and its consequences have diminished the elasticity. As the elasticity of the scleral tissue, which acts as a regulator, fails here, the law of the "horror vacui," so to speak, comes into play, which suffices, when there is the predisposition, to detach the stretched retina from the choroid, whose connection with the retina has been loosened. If the accommodative strain continues, the slight elevation may develop into a bullous detachment of the retina. As the increased intraocular tension which accompanies the accommodative action also causes absorption of the vitreous humor, it becomes mainly the part of the stream of diffusion which sets in when the accommodation is suddenly relaxed to fill the vacuum created. The compensating fluid from the blood vessels of the choroid would then increase the detachment, as the retina is no longer any obstacle. The author then discusses the therapeutics and prophylactic measures.

C. Higgens. *Three Cases of Simple Atrophy of Discs in the same Family. Lancet*, Nov. 19, 1881, vol. 2, 869. The fourth, fifth and eighth children of a family of ten, born alive. S. began to fail at æt 15 years in the fourth, 11 in fifth, and 10 in eighth. No other symptoms than simple atrophy of discs with almost blindness; failure rapid in fourth and eighth, slow in the fifth. Mother, symptoms of syphilis soon *after* birth of No. 4; Nos. 6, 9 and 10 healthy; No. 7 died almost at birth; between Nos. 4 and 5 were several miscarriages. Retinal blood-supply below normal. H. thinks the atrophy due to disease of blood vessels.—*E. Nettleship.*

Talko. *Injuries of the Eye in Recruits. Gaz. lekarsh*, 1881, *C. f. a.*, Bd. v. p. 386. Injuries of the cornea by caustic potash, nitrate of silver, or bites of leeches, are frequently found among the Russian conscripts. An artificial trauma of the eye was proven in sixteen cases out of two hundred and thirty-five who were suspected of simulating, or 7 per cent.

Drosdoff. *Epidemic Scurvy. Journal of the Kasan Med. Soc.*, 1881, Nos. 14 and 15. From a report by Krückow. Among 200 scurvy patients, 28 with diseases of the eye. Besides hemorrhages beneath the conjunctiva and skin of the lids, four cases of keratitis serosa diffusa

(one with a corneal ulcer), two cases of iritis, four of hemoralopia.—*Hirchmann.*

v. Hippel. *Affections of the Eye in Recurrent Fever. Ber. über d. Ophth. Klinik Zu Giessen, Stuttgart*, Enke, 1881. Among 193 patients, 23 cases = 11 per cent. were observed with affections of the eye. Most of them iridochoroiditis. Hypopyon was never observed. In four cases the ocular affection set in during the attacks in the others, one to four weeks later. In two cases hemorrhages of the retina were observed. Result favorable in all cases.

Luchhau. *Diseases of the Eye and Ear in Recurrent Fever. Ver. für Wissench.* Heilk. z. Königb. *Berl. Klin. Wochenschr.*, No. 43. Among 180 patients, six cases with diseases of the eye during the attack, in three iritis in one eye (once with hypopyon), in two optic neuritis of both eyes, and in one iritis in one eye with hypopyon during the first attack, from which recovery was complete, and during the second attack irido-cyclitis and neuro retinitis in both eyes.

Hirchberg. *Tuberculous Inflammation of the Eye. Transact.* of the Internat. Med. Congr., London, 1881, p. 117. Among 1700 patients, three cases; one of the conjunctiva bulbi, one of the iris, and one of the choroid. The diagnosis was confirmed in each case by the anatomical investigation. In three cases, swelling of the lymphatic glands was observed as a secondary symptom, so that it is advisable to remove tuberculous deposits as rapidly as possible by operation. The changes in the eye are undoubtedly of a specific character.

J. A. Ormerod. *The Diagnostic Symptoms of Tabes Dorsalis. St. Bartholomew's Hospital Reports*, Vol. xvii, 39, 1881. O. directs his attention in the interesting paper, chiefly to the absence of the knee phenomena and affections of the pupils in the early stages of tabes. He observes, in the first place, that (as is known) the true "Argyll Robertson pupil" (a small pupil was associated, but with no reflex action) is subject to variations; it may be larger, but act as above; or it may be motionless to associated as well as to reflex stimulus. In eight cases, with marked incoördination, reflex action of pupils lost or feeble; associated action normal in six; both actions wanting or feeble in two. In four, with slight incördination, reflex action lost, associated action normal, two; both feeble, one; variable, one. In four with other symptoms but no incoordination, reflex action lost or feeble, associated action normal in three; both absent, one. In twenty-one cases, optic atrophy in four; six patients were more or less deaf, two of them having optic nerve atrophy (E. Nettleship).

J. Hughlings Jackson. *Tumors of the Cerebellum.* Proceedings of the Medical Soc. of London, vol. v, 50, 1881. The point of special ophthalmic interest is the author's statement, that he has never seen defective V. in cerebellar tumor without optic neuritis; thus, in reference to the hypothesis that such tumor, especially if of the middle lobe, might cause blindness by pressing on corp. quadrigen.

Zaufal. *Value of Ophthalmoscopic Examination for the Diagnosis, Prognosis and Therapeutics of the Ear. Pragera Med. Wochenschr.* Bd. vi, No. 45, p. 448. When an inflammation of the middle ear spreads to the meninges, the eye of the same side is first attacked; generally, however, both eyes are affected. After trephining the mastoid process, the hyperæmia of the corresponding eye vanishes more rapidly. Almost all cases of otitis media, with or without caries, which lead to meningitis and thrombosis of the sinus are complicated with affections of the fundus of the eye.

Correspondence.

A Correction.

Ed. Med. and Surg. Reporter:—

I observe in your issue of the 23d inst. the following strange combination of erroneous statements: "Dr. J. Forsyth Meigs * * * * was a son of Prof. C. D. Meigs, who, while a member of the Faculty of the Jefferson Medical College, sent his son to the University of Pennsylvania, for his education in medicine, by which act he very naturally incurred the displeasure of his Faculty." I desire to inform you that Dr. C. D. Meigs was elected a professor in the Jefferson Medical College on the 6th *day of April*, 1841, that is, *three years after Dr. J. F. Meigs had graduated* at the University. How such a singular blunder could have been made I fail to see.

Respectfully yours,

Ellerslie Wallace, M.D.

Philadelphia, Dec. 26th, 1882.

[The statement was taken, evidently too hastily, from the daily papers. We are glad to have it corrected from the records, as it might seem to have been prompted by some questionable motive. Dr. C. D. Meigs was too sincere an admirer of the great institution with which he was so long and honorably connected to take any action which would in any way reflect on it.—Eds. Reporter.]

DEATH.

SHELLAR.—In Mt. Joy, Nov. 29th, after a lingering illness, Dr. Adam Shellar, in his seventy-fifth year.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.

The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE { Aloin, 1-5 gr. / Strychnine, 1-60 gr. } . . . per 100, 60c.

A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.

The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. { Atropia 1-300 gr. / Morphia, 1-24 gr. } . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. { Atropia, 1-60 gr. / Morphia, 1-8 gr. } . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. { Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr. } . . per 100, 1.50.

McK. & R. DIURETIC. { Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr. } . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " = 30 grs. " "), . $1.60.
" " " 5 grs. (" " = 50 grs. " "), . 2.40.

We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)

WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. { Ergotin Purif., 1 gr. / Aloin, 1-2 gr. } . . . per 100, $1.25.

The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. { Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr. } . per 100, $1.25.

Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.

Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., ... per 100, 60c.

Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. { Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs. } . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, { Iodoformum, 1 gr. / Pulv. Opii, 1 gr. } . . . . per 100, $1.50.

Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.

{ Ext. Coloc. Comp. pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr. }

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.

The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1-16, 1-10, 1-8, 1-6, and 1-4 gr.

We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.

Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.

A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr. } . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr. } . . per 100, $2.50.

Send for Seventh Edition of our Formula Book.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil, 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1306-1357eow **SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.**

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

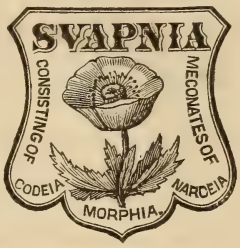
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium. The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

WM. R. WARNER & CO., Pharmaceutical Chemists,
1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

THE APOLLINARIS COMPANY (LIMITED),
19 REGENT STREET, LONDON, S. W.

F. DE BARY & CO., Sole Agents for the United States, 41 & 43 WARREN ST., NEW YORK.
1317-1325

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable TO PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms:—

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides..... 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, **which result was corroborated by repeated trials.**

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

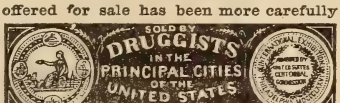
THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.



Respectfully,

E. HEATON.

1315-136deow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits: contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth: or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

PALATABLE—WHOLESOME—EFFICIENT

Laxativus Fructus Pastillus.
(LAXATIVE FRUIT LOZENGE.)
Properties—LAXATIVE AND CATHARTIC.
FORMULA:
CATHARTINIC ACIDUM (Pura Cassia Acutifolia) ½ Parts.
TAMARINDUS INDICA (Tamarind) Pulp. m "
PYRUS CYDONIA (Quince) Pulp. m "
PRUNUS DOMESTICA (Prune) Pulp. viii "
GLYCERINE, C. P. q. "
Prepared in 22-grain Lozenges, and covered with chocolate and sugar crystal.
Dose for Adults, one to two Lozenges.
Dose for Children, one-fourth to one Lozenge.
PREPARED BY
HETHERINGTON & CO.,
CHEMISTS. 1164 BROADWAY, NEW YORK.

Laxativus Fructus Pastillus

(LAXATIVE FRUIT LOZENGE)

SERVES AS A COOLING AND REFRESHING CORRECTIVE FOR CONSTIPATION, BILIOUSNESS, CEREBRAL CONGESTION, INDISPOSITION, FEVERISHNESS, DIZZINESS, HEMORRHOIDS, &c.

Its action being mild (and prompt), and its taste akin to a choice bit of fruit or dessert, it is especially appreciated by ladies and children, and those who dislike pills and the usual purgative medicines.

☞ *A trial will bear out all claims advanced for the preparation, and at once establish its medicinal value.*

TRIAL SAMPLES MAILED GRATIS

NOTE.—The scarcity of the active ingredient of formula, CATHARTINIC ACIDUM, occasioned by the difficulties and high cost attending its manufacture, has prevented this agent becoming generally known; but now that its production and presentation in "Laxative Fruit Lozenge" form has been undertaken on a large scale, with improved facilities that will insure moderate prices, and as the product is distinguished by the name of Professor Dragendorff, the well-known German chemist, as its discoverer, it promises to become popular among physicians and druggists, and through them the public at large.

Put up for Dispensing in Bottles, each containing 100 Lozenges.

1322-24

SOLD BY THE WHOLESALE DRUG TRADE.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insolable, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

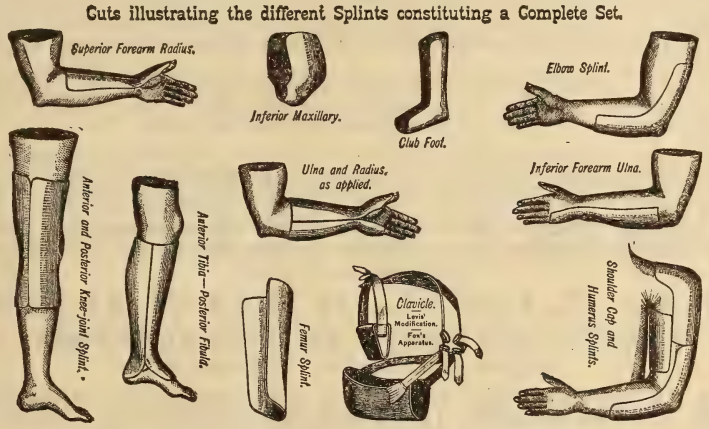
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

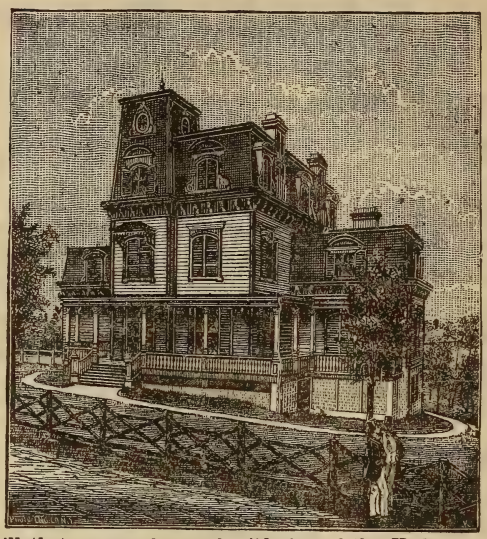
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane and W. H. Vittum, in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

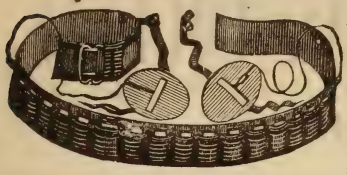
DR. McINTOSH'S ELECTRIC OR CALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

THE BEST.

ANGLO-SWISS MILK FOOD.

Used by more than 1500 Physicians in New York City alone

During the past year, with uniformly favorable results.

Prescribed by leading Practitioners of all Schools, and used in prominent Institutions throughout the Country.

CHEMICAL ANALYSIS AND OTHER RELIABLE TESTIMONY.

Moisture	5 to 6 per ct.	Carbo-hydrates, insoluble in water	15 to 16 per ct.
Nitrogenous matter (Nitrogen 2.25 to 2.35)	14.5 " 15 "	Fat	4 " 5 "
Carbo-hydrates, soluble in water	54 " 55 "	Ash (inclusive of 0.6 Phosphoric Acid)	2 " 2.5 "

"The proportion of nitrogenous matter or plastic aliments to carbo-hydrates or respiratory constituents in mother's milk is 1 : 4.5, and in this food the proportion is practically the same, namely, 1 : 5.7. The fat, as a respiratory substance, is here reduced to the equivalent of starch.

"My analysis perfectly agrees with the analysis given on their labels, and bears witness to the excellent and rational manner in which this food is compounded." DR. E. GEISSLER, Dresden, April 10th, 1880.

Microscopic Examination of Anglo-Swiss Milk Food: "Magnified 800 times. A.—Starch Cooked; B.—Oil Globules; C.—Gluten Cells. It is a Milk Food, with Gluten and Cooked Starch."—*Ephraim Cutter*, M.D.

N. B.—This is the only MILK FOOD in which Dr. Cutter found any Gluten.

"Used in New York Infant Asylum.—*J. Lewis Smith*, M.D.

"Has yielded most favorable results."—*J. C. Guernsey*, M.D., *Philadelphia.*

"The Diarrhœa had been persistent for four months, in spite of the use of other foods. After using two days the evacuations became normal, and the puny child is now plump and healthy."—*Geo. M. Ockford*, M.D., *Vincennes, Ind.*

"Used in our Seaside Nursery. It nourishes and strengthens every child to whom it is given."—*John W. Kramer*, M.D., *Master of St. John's Guild.*

"Our little ones love it. It regulates and strengthens the bowels."—*Sisters of Charity, St. Vincent's Home, Philadelphia.*

"We find that it agrees with each case."—*M. Spencer, Matron, Philadelphia Infants' Home.*

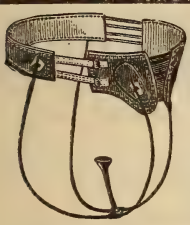
DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-1345-eow

VINUM D.GESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last nine years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

JAMES TYSON, M.D.	LOUIS A. DUHRING, M.D.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

For Catalogue giving full particulars, address

JAMES TYSON, M.D., Secretary,
1310-1361eow P. O. Box 2838, Philadelphia, Pa.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

FEES.

PRIVATE
TREATMENT OF OPIUM HABITUÉS.

DR. J. B. MATTISON

Continues to receive, at his residence,

185 LIVINGSTON STREET, BROOKLYN,

A limited number of

OPIUM HABITUES,

To whom he devotes his special professional attention.

METHOD

Of treatment is *original*—that of rapid reduction—the opiate withdrawal being effected in from five to ten days; avoiding the painful ordeal of immediate abandonment, and the tiresome delay of prolonged decrease; meanwhile, by a *special* employment of tonics and nervines, meeting the requirements of individual cases as they seem to demand.

DURATION

Of treatment varies from two to eight weeks.

TERMS,

From twenty-five to forty dollars per week, according to size and location of apartments—payable in advance.

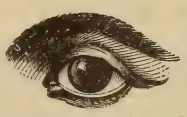
PATIENTS

Are limited—four—and select. No alcoholics or lunatics accepted; and only such habitués as, after full history of the case from attending physician or in person, are deemed likely to recover.

ADVANTAGES

Offered are—handsomely furnished apartments; desirable privacy; a liberal cuisine; cheerful social surroundings, and personal professional attention, based upon several years' experience in the management of this disease. 1t

ARTIFICIAL EYES.



The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color), and confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

WYETH'S DIALYSED IRON.

A pure neutral solution of peroxide of iron in the colloid form; each fluid oz. contains 27.68 grs.

ADVANTAGES OF WYETH'S IRON.

"It is in itself easily digested, and its administration in all those cases where Iron is indicated, such as General Debility, Chlorosis, Hysteria, Anæmia, accompanied by Fluor Albus or Seminal Weakness, and Tardy Convalescence, Neuralgia, etc., has been followed by the best results."—Professor HAGAR.

The Lancet: "Wyeth's Preparation is excellent."

MR. THOS. BRYANT, F.R.C.S., *Senior Surgeon of Guy's Hospital, writes:* "I consider it the best and always prescribe it"

"It has no disagreeable taste or smell, and does not injure nor cause any discoloration of the teeth."—JAMES EDMUNDS, M.D., M.R.C.P.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH.

FIVE GRAINS IN EACH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc. Especially Convenient for Singers and Public Speakers.

A Single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

MORRELL MACKENZIE, M.D., London, *Senior Physician to the Hospital for Diseases of the Throat, late Physician to the London Hospital, writes:* "I have used Wyeth's Compressed Chlorate of Potash Tablets extensively during the last two years, and I consider that you have made a most valuable addition to pharmacology. The slow but uniform manner in which the Tablets dissolve renders their action perfect, while their small size permits them to be kept in the mouth without inconvenience during speaking and even singing."

The London Medical Record says: "Wyeth's Compressed Tablets are a most elegant preparations of remarkable merit. They are infinitely superior to the ordinary lozenge, being at once more compact, [illegible] solu[illegible]

"Of convenient size; they are beautifully made; and as they dissolve slowly in the mouth, are well suited for throat affections."—*The Lancet.*

"We especially recommend the Compressed Chlorate of Potash."—*British Medical Journal.*

Analytical Reports of Medical Press and Circular: "Chlorate of Potash is a remedy of acknowledged value in diphtheritic sore throat, and in inflammation of the mouth and throat induced by a depressed state of the system. It relieves hoarseness, and in many cases of fœtid breath it proves an efficient corrective. The Compressed Tablets contain exactly the theoretical amount, and are not made up with a vehicle."

Wyeth's Compressed Tablets.—Chlorate of Potash with Muriate of Ammonia.

3½ GRS. CHLORATE OF POTASH, 1½ GRS. MURIATE OF AMMONIA.

These Two Drugs are highly commended by the Profession for all forms of Sore Throat, accompanied by Ulcerations or Disordered Secretion of the Mucous Membrane.

The advantages of the combination of these two efficient remedial agents over either one administered alone will be readily appreciated by Physicians.

The Proportion of Muriate of Ammonia being less, and being intimately mixed with the less soluble salt of Chlorate of Potash, the disagreeable taste of the former is not so apparent, while the therapeutic effect is really just as potent.

DIRECTIONS.—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the mouth at the back of the tongue, but not at the tip, the surface of which is much more sensitive to taste and to the pungency of the ammonia salt. Children, half of one as often.

WYETH'S COMPRESSED TABLETS.—MURIATE OF AMMONIA.

THREE GRAINS EACH.

The solvent and discutient, as well as antiphlogistic powers of this salt are well known, and have led to its extensive employment, especially in Germany, in cases of Sore Throat, Bronchitis, etc., attended with abundant secretion of thick and tough mucus or phlegm.

Physicians will at once appreciate the great advantage to their patients of the local effects of this Salt slowly dissolving and coming in direct contact with the inflamed surface. It at once mitigates the cough or irritation, and lessens expectoration. Two or three of the Tablets will sometimes entirely relieve coughs that have long resisted treatment with the ordinary remedies.

DIRECTIONS.—A Tablet should be held and allowed to dissolve at the back part of the mouth, and repeated frequently when the irritation or tendency to cough is decided. In many cases half a Tablet is sufficient at one time.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH AND BORAX

(OR VOICE TABLETS).

Two-and-one-half grains of each, free from any addition or excipient,

Quickly relieves hoarseness and clears the voice. Conveniently retained in the mouth while speaking or singing.

"Excellent and reliable specimens of a distinct improvement in pharmacy."—*British Medical Journal.*

We ask the attention of Physicians to the above excellent combination, which will be found highly efficient in the relief of inflammatory affections of the mouth and throat, and other morbid states of those parts, attended with disordered secretions. The depurative effects of these remedies are well known to the Profession.

As the taste is not disagreeable, we have prepared them in the form of Compressed Tablets, thus giving the patient the full benefit of their action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent their effects, but which sometimes themselves offend the stomach.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as while the solution is but temporary, the Tablet really acts as a continuous gargle.

Children take the Tablets regularly, as they have no unpleasant taste; while the convenience of carrying them in the pocket commends them to travelers.

For Singers and Public Speakers suffering from Hoarseness or Huskiness, a single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

DIRECTIONS.—One of the Tablets placed in the mouth every hour or two, and allowed to dissolve, will quickly relieve sore mouth, inflamed tongue, and congestion of the throat.

For offensive breath, they will prove equally efficient as our Chlorate of Potash Tablets, the addition of a mild alkali, like Borax, increasing the activity of the Chlorate of Potash.

WYETH'S COMPRESSED TABLETS.—BI-CARBONATE OF SODA.

FIVE GRAINS IN EACH.

Useful in all cases where an Antacid is indicated.

The value of alkalies, and especially of the Bi-Carbonates of Potash and Soda, is very fully understood by medical men, and to a great extent also by the public. In a very large class of cases, Indigestion, Flatulency, Heartburn and Colic are due to an excess of acid in the stomach; and this condition usually constitutes an important element in Gout, Rheumatism or Gravel.

DOSE.—As an antacid, one every two or three hours till relieved. For Gout, Rheumatism or Gravel, one or two thrice daily. To be swallowed with water.

WYETH'S COMPRESSED SODA-MINT, OR NEUTRALIZING TABLETS.

Each Small Tablet contains:—Soda Bi-Carb., 4 grains; Ammon. Carb., ¼ grain; Ol. Menth. Pip., ⅒ gtt.

It is well known that the most frequent cause of discomfort in the stomach is the presence of an excess of acid.

Probably the most popular prescription with practitioners for cases arising from Acidity of the Stomach, such as Colic, Flatulence in Children, Heartburn, Sick Headache, Dyspepsia, etc., is a combination of Sodæ Bi-Carb. and Ammoniæ Carb., with some pleasing adjuvant in the form of a mixture.

The Soda-Mint or Neutralizing Tablet presents this favorite and very efficacious prescription in an exceedingly agreeable form, thereby greatly facilitating its administration, particularly to children.

Travelers and persons engaged in business will highly appreciate the convenience of having this valuable remedy prescribed in such a portable form.

DOSE.—From one to two Tablets, according to age. To be *swallowed* with water.

IT WILL GIVE US PLEASURE TO FURNISH, ON APPLICATION, SUFFICIENT OF THESE TABLETS TO TEST THEIR MERITS BY ACTUAL USE.

JOHN WYETH & BROTHER, CHEMISTS, PHILADELPHIA.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

MITCHELL'S SOLUBLE MEDICATED GELATIN PREPARATIONS.

URETHRAL BOUGIES. Long size, six and one-half inches.

URETHRAL BOUGIES. Short size, three inches.

NASAL BOUGIES.

15 grain size.

30 grain size.

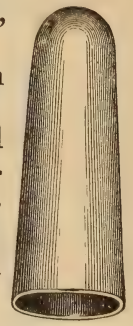
RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to



HOLLOW VAGINAL SUPPOSITORIES.

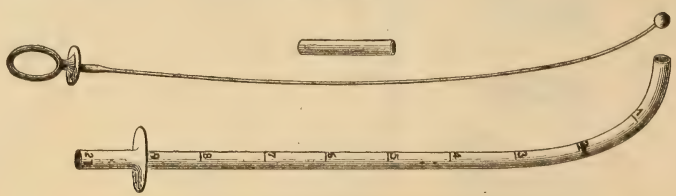
INTRA-UTERINE PENCILS AND CARRIER.



PROSTATIC BOUGIES AND CARRIER.

TO PHYSICIANS.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL: PHOSPHORI COMP: (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL:- IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL: DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

PIL: CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

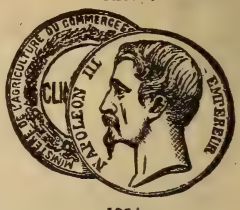
MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.



Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1352m

☞ Sold in Drug Stores, at 25 cents per Pint Bottle.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone.* It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

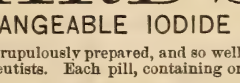
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297-1348-eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth: or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

PALATABLE—WHOLESOME—EFFICIENT

Laxativus Fructus Pastillus.
(LAXATIVE FRUIT LOZENGE.)
Properties—LAXATIVE AND CATHARTIC.
FORMULA.
CATHARTINIC ACIDUM (Pura Cassia Acutifolia) ..... VI Parts.
TAMARINDUS INDICA (Tamarind) Pulp ..... III "
PYRUS CYDONIA (Quince) Pulp ..... III "
PRUNUS DOMESTICA (Prune) Pulp ..... VIII "
GLYCERINE, C. P. ..... II "
Prepared in 22-grain Lozenges, and covered with chocolate and sugar crystal.
Dose for Adults, one to two Lozenges.
Dose for Children, one-fourth to one Lozenge.
PREPARED BY
HETHERINGTON & CO.,
CHEMISTS. 1164 BROADWAY, NEW YORK.

Laxativus Fructus Pastillus

(LAXATIVE FRUIT LOZENGE)

SERVES AS A COOLING AND REFRESHING CORRECTIVE FOR CONSTIPATION, BILIOUSNESS, CEREBRAL CONGESTION, INDISPOSITION, FEVERISHNESS, DIZZINESS, HEMORRHOIDS, &c.

Its action being mild (and prompt), and its taste akin to a choice bit of fruit or dessert, it is especially appreciated by ladies and children, and those who dislike pills and the usual purgative medicines.

☞ *A trial will bear out all claims advanced for the preparation, and at once establish its medicinal value.*

TRIAL SAMPLES MAILED GRATIS

NOTE.—The scarcity of the active ingredient of formula, CATHARTINIC ACIDUM, occasioned by the difficulties and high cost attending its manufacture, has prevented this agent becoming generally known; but now that its production and presentation in "Laxative Fruit Lozenge" form has been undertaken on a large scale, with improved facilities that will insure moderate prices, and as the product is distinguished by the name of Professor Dragendorff, the well-known German chemist, as its discoverer, it promises to become popular among physicians and druggists, and through them the public at large.

Put up for Dispensing in Bottles, each containing 100 Lozenges.

1322-24

SOLD BY THE WHOLESALE DRUG TRADE.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

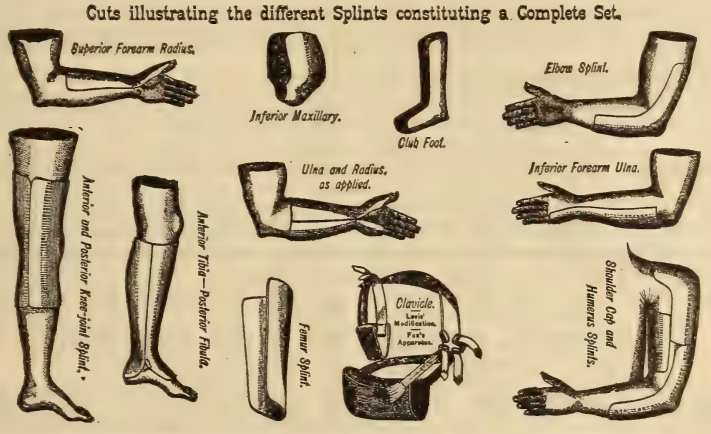
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

JENNER

VACCINE FARM,

CHAMBERSBURG,

FRANKLIN CO. PA.

DRS. J. L. & L. F. SUESSEROTT,

PROPRIETORS.

The "virus" produced on this farm is from pure "Beaugency stock," of our own importation, and from animals of perfect health. A constant supervision of the animals and product is had by a member of the firm, and all virus sent out is guaranteed. A fresh supply being given in all cases of failure in *primary* operations.

Orders by mail or telegraph promptly filled at the following rates:—

Whole quills (each sufficient for two vaccinations), each,	.25
Five quills,	1.00
Ten large ivory points well charged on both sides,	1.50
Six large ivory points well charged on both sides,	1.00
Large ivory points, less than six, well charged on both sides, each,	.25
Lymph Tubes, large size, each,	2.00
Crusts, small size, $1.00; Large size,	2.00

1282-tf

UNIVERSITY OF THE CITY OF NEW YORK.

MEDICAL DEPARTMENT.

410 East Twenty-sixth Street, opp. Bellevue Hospital, New York City.

FORTY-SECOND SESSION, 1882-83.

FACULTY OF MEDICINE

REV. JOHN HALL, D.D., LL.D., *Chancellor of the University, pro tem.*

ALFRED C. POST, M.D., LL.D., Professor Emeritus of Clinical Surgery, President of the Faculty.

CHARLES INSLEE PARDEE, M.D., Dean of the Faculty, Professor of Otology, Surgeon to the Manhattan Eye and Ear Hospital.

JOHN C. DRAPER, M.D., LL.D., Professor of Chemistry.

ALFRED L. LOOMIS, M.D., Professor of Pathology and Practice of Medicine, Visiting Physician to Bellevue Hospital.

WM. DARLING, M.D., LL.D., F.R.C.S., Professor of General and Descriptive Anatomy.

WILLIAM H. THOMSON, M.D., Professor of Materia Medica, Therapeutics, and Diseases of the Nervous System, Visiting Physician to Bellevue Hospital.

J. W. S. ARNOLD, M.D., Professor of Physiology and Histology.

J. WILLISTON WRIGHT, M.D., Professor of Surgery, Visiting Surgeon to Bellevue Hospital.

WM. M. POLK, M.D., Professor of Obstetrics and the Diseases of Women and Children, Gynæcologist to Bellevue Hospital.

LEWIS A. STIMSON, M.D., Professor of Surgical Pathology, Surgeon to Bellevue Hospital, Curator to Bellevue Hospital.

FANEUIL D. WEISSE, M.D., Professor of Practical and Surgical Anatomy, Surgeon to Workhouse Hospital, B. I.

STEPHEN SMITH, M.D., Professor of Clinical Surgery, Surgeon to Bellevue Hospital.

A. E. MACDONALD, LL B., M.D., Professor of Medical Jurisprudence and Diseases of the Mind, Medical Superintendent of the New York City Asylum for the Insane.

R. A. WITTHAUS, M.D, Professor of Physiologieal Chemistry.

HERMAN KNAPP, M.D., Professor of Ophthalmology, Surgeon to the Ophthalmic Institute.

AMBROSE L. RANNEY, M.D., Adjunct Professor of Anatomy.

JOSEPH E. WINTERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY SESSION will begin on Wednesday, September 20, 1882, and end October 4, 1882. It will be conducted on the same plan as the Regular Winter Session.

THE REGULAR WINTER SESSION will begin October 4, 1882, and end about the middle of March, 1883. The Plan of Instruction consists of Didactic and Clinical Lectures, Recitations, and Laboratory Work in all subjects in which it is practicable. To put the laboratories on a proper footing, a new building has been erected, at an expense of thirty thousand dollars. It will contain laboratories fitted for instruction in Chemistry, Histology, Pathology, Materia Medica, Operative Surgery, and Gynæcology.

Two to five Didactic lectures and two or more Clinical lectures will be given each day, by members of the Faculty. In addition to the ordinary clinics, *special clinical instruction*, WITHOUT ADDITIONAL EXPENSE, will be given to the candidates for graduation during the latter part of the Regular Session. For this purpose the candidates will be divided into sections, of twenty-five members each. All who desire to avail themselves of this valuable privilege must give in their names and pay their examination fee of $30 to the Dean during the first week in November. At these special clinics students will have excellent opportunities to make and verify diagnoses, and watch the effects of treatment. They will be held in the Wards of the Hospitals and at the Public and College Dispensaries.

Each of the seven professors of the Regular Faculty will conduct a recitation on his subject one evening each week. Students are thus enabled to make up for lost lectures, and prepare themselves properly for their final examinations, without additional expense.

THE SPRING SESSION will begin about the middle of March and end the last week in May. The daily Clinics and Special Practical Courses will be the same as in the Winter Session, and there will be Lectures on Special Subjects, by the Members of the Faculty.

It is supplementary to the Regular Winter Session. Nine months of continued instruction are thus secured to all students of the University who desire a thorough course.

FEES.

For course of Lectures,	$140 00
Matriculation,	5 00
Demonstrator's Fee, including material for dissection,	10 00
Final Examination Fee,	30 00

For further particulars and circulars address the Dean,

Prof. CHAS. INSLEE PARDEE, M.D.,
University Medical College, 410 East 26th Street, New York City.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris.

E. FOUGERA & CO., Agents, New York.

1278–1330eow

TANRET'S PELLETIERINE.

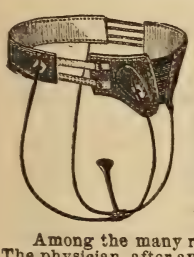
For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

1293–1345eow



DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

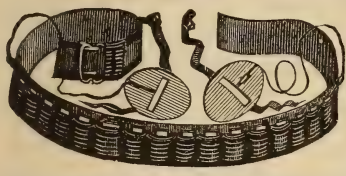
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

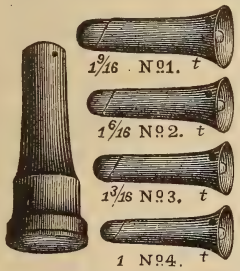
Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,
1281-1332 **192 AND 194 JACKSON STREET, CHICAGO, ILL.**

STAUFFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



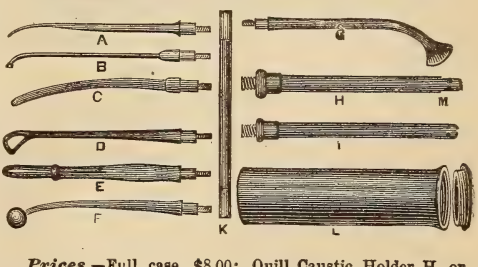
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

L. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

J. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

J. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

J. R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

J. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

L. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

* WORKING BULLETIN.—A pamphlet containing the botanical description of *each plant*, with chemical, microscopical, physiological, therapeutical investigations, etc., etc. Sent free, by mail, on application.

1297 1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL. IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

1317-1325

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

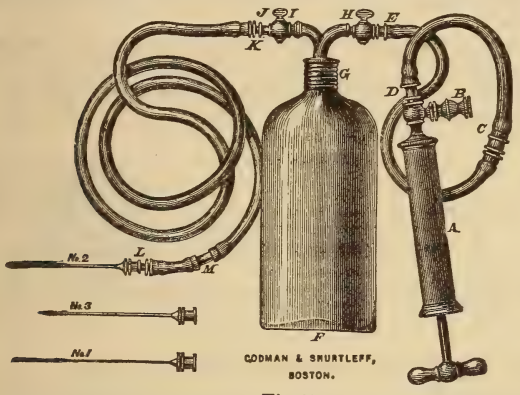

Fig. 77.

Fig. 68.

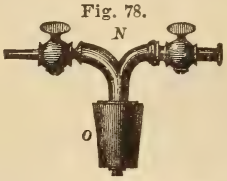

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

HIGHEST AWARDS, MEDALS AND DIPLOMAS, OVER ALL AMERICAN AND EUROPEAN COMPETITORS.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

PHYTOLACCA DECANDRA, PLAIN.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN.

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1297-1348eow

It is the only food that will relieve the Consumptive from hunger.

It will make Blood faster than all preparations known.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

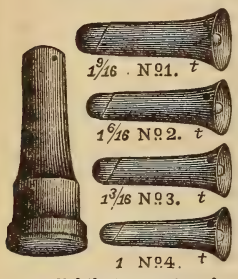
STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



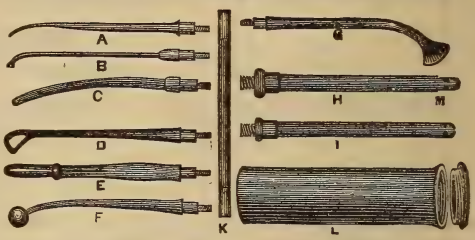
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

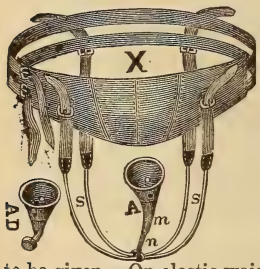
D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also intra-uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2½ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit

W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

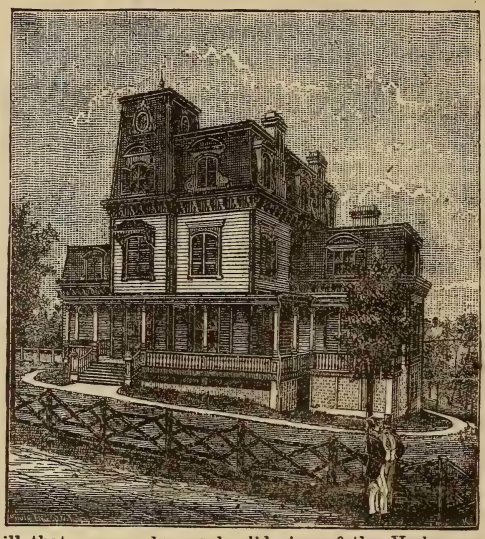
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane and W. H. Vittum, in charge.

Consulting Physicians.

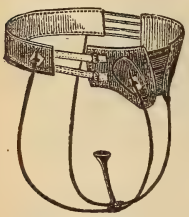
Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.



DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

THE JEFFERSON MEDICAL COLLEGE,

OF PHILADELPHIA.

The Fifty-eighth Session of the Jefferson Medical College will begin on Monday, October 2d, 1882, and will continue until the end of March, 1883. Preliminary Lectures will be held from Monday, 11th of September.

PROFESSORS.

S. D. GROSS, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab. (Emeritus).
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

WM. H. PANCOAST, M.D.,
General, Descriptive, and Surgical Anatomy.

ROBERT E. ROGERS, M.D.
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D., LL.D.,
Materia Medica and General Therapeutics.

HENRY C. CHAPMAN, M.D.,
Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

1318-1330 eow **ELLERSLIE WALLACE, DEAN.**

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-1348-eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive unction. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

MEDICAL DEPARTMENT. SESSION OF 1882-83.

Next term will commence on October 11th and close on March 7th, 1883. The new, elegant building, which in completeness is not surpassed by any medical college in the West, will be ready for use next session. There are two plans for instruction: Three term graded. Two course non graded. No preliminary term. No holiday vacation. The daily work consists of six lectures, including Clinics at Mercy Hospital, Clinical Practice, Operations upon the Cadaver, and dissecting material without extra charge. Expense per term: Lectures, $20; Matriculation, $5; Demonstrator's ticket, $10; Final Examination Fee, $25.

For additional information, address

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

SPECIALTIES.

Empty Gelatine Capsules.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders a are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ½ gr.

THERAPEUTICS—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,

NEW HYPODERMIC SYRINGES.

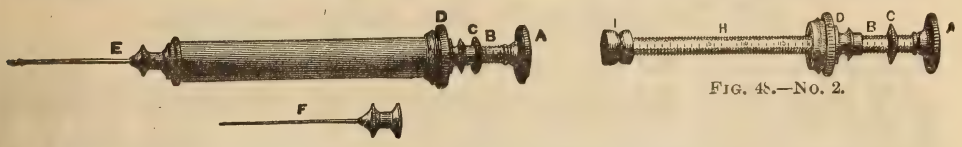

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

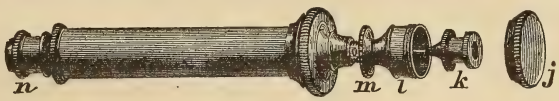
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

PARIS, 1867. **Prize Medal.**

1868. **Silver Medal.**

1872. **Gold Medal.**

1873, VIENNA. **Medal of Merit.**

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

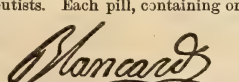
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297-1348-eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

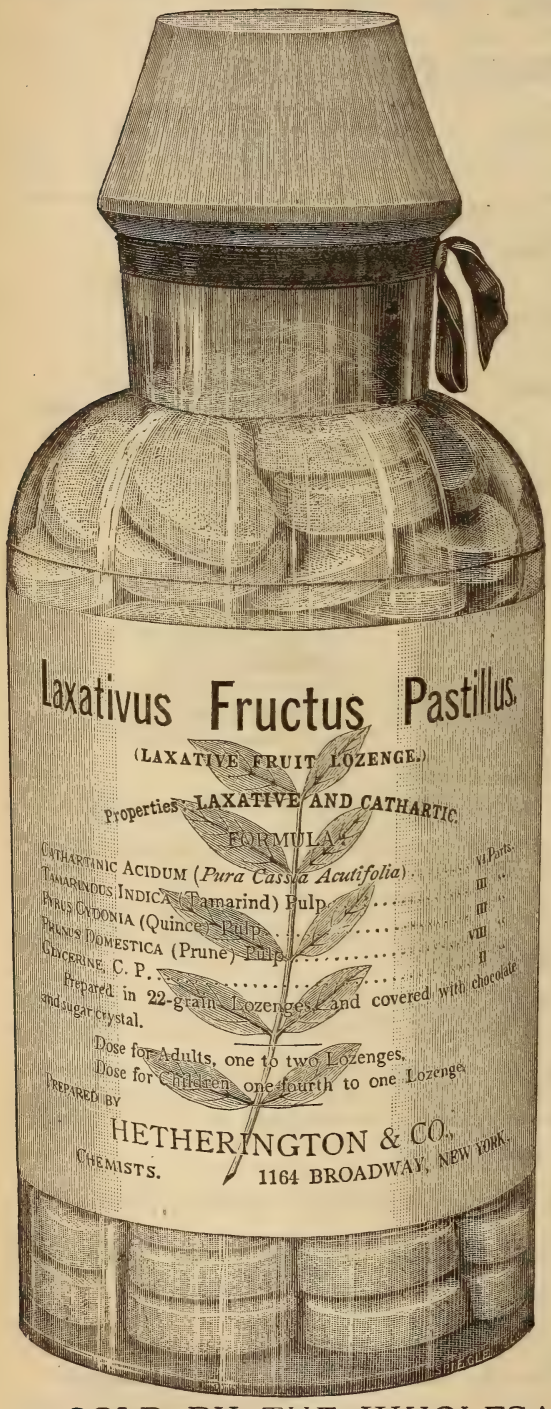
PALATABLE—WHOLESOME—EFFICIENT



Laxativus Fructus Pastillus.
(LAXATIVE FRUIT LOZENGE.)
Properties: LAXATIVE AND CATHARTIC.
FORMULA:
CATHARTINIC ACIDUM (Pura Cassia Acutifolia) ... VI Parts.
TAMARINDUS INDICA (Tamarind) Pulp ... III "
PYRUS CYDONIA (Quince) Pulp ... III "
PRUNUS DOMESTICA (Prune) Pulp ... VIII "
GLYCERINE, C. P. ... II "
Prepared in 22-grain Lozenges, and covered with chocolate and sugar crystal.
Dose for Adults, one to two Lozenges.
Dose for Children, one-fourth to one Lozenge.
PREPARED BY
HETHERINGTON & CO.,
CHEMISTS. 1164 BROADWAY, NEW YORK.

Laxativus Fructus Pastillus

(LAXATIVE FRUIT LOZENGE)

SERVES AS A COOLING AND REFRESHING CORRECTIVE FOR CONSTIPATION, BILIOUSNESS, CEREBRAL CONGESTION, INDISPOSITION, FEVERISHNESS, DIZZINESS, HEMORRHOIDS, &c.

Its action being mild (and prompt), and its taste akin to a choice bit of fruit or dessert, it is especially appreciated by ladies and children, and those who dislike pills and the usual purgative medicines.

☞ *A trial will bear out all claims advanced for the preparation, and at once establish its medicinal value.*

TRIAL SAMPLES MAILED GRATIS

NOTE.—The scarcity of the active ingredient of formula, CATHARTINIC ACIDUM, occasioned by the difficulties and high cost attending its manufacture, has prevented this agent becoming generally known; but now that its production and presentation in "Laxative Fruit Lozenge" form has been undertaken on a large scale, with improved facilities that will insure moderate prices, and as the product is distinguished by the name of Professor Dragendorff, the well-known German chemist, as its discoverer, it promises to become popular among physicians and druggists, and through them the public at large.

Put up for Dispensing in Bottles, each containing 100 Lozenges.

1322-24

SOLD BY THE WHOLESALE DRUG TRADE.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.:

$1.00 each.

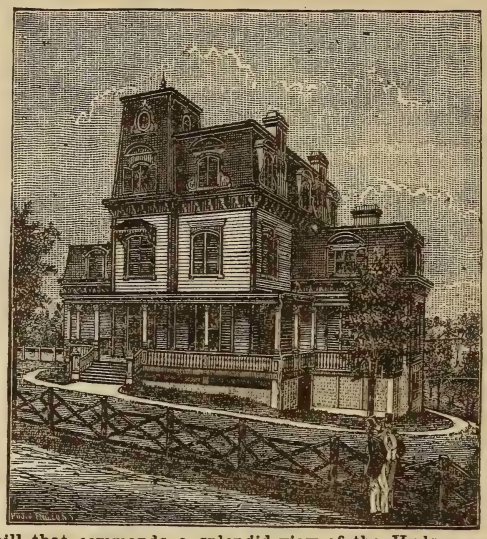
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

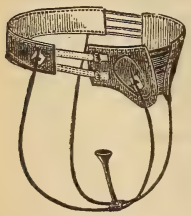
Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.



DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

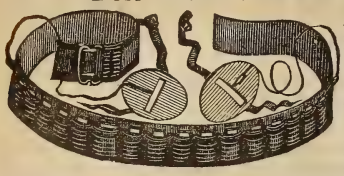
2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR CALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

THE SCIENCE AND ART

OF

MIDWIFERY.

BY

WILLIAM THOMPSON LUSK, M.A., M.D.,

Professor of Obstetrics and Diseases of Women and Children in the Bellevue Hospital Medical College; Obstetric Surgeon to the Maternity and Emergency Hospitals; and Gynæcologist to the Bellevue Hospital.

COMPLETE IN ONE VOLUME, 8vo, WITH 226 ILLUSTRATIONS.

Price, cloth, $5.00; sheep, $6.00.

OPINIONS OF THE PRESS.

"It contains one of the best expositions of the obstetric science and practice of the day with which we are acquainted. Throughout the work the author shows an intimate acquaintance with the literature of obstetrics, and gives evidence of large, practical experience, great discrimination and sound judgment. We heartily recommend the book as a full and clear exposition of obstetric science and safe guide to student and practitioner."—*London Lancet.*

"This book bears evidence on every page of being the result of patient and laborious research and great personal experience, united and harmonized by the true critical or scientific spirit, and we are convinced that the book will raise the general standard of obstetric knowledge, both in his own country and in this. Whether for the student obliged to learn the theoretical part of midwifery, or for the busy practitioner seeking aid in face of practical difficulties, it is, in our opinion, the best modern work on midwifery in the English language."—*Dublin Journal of Medical Science.*

"To consider the work in detail would merely involve us in a reiteration of the high opinion we have already expressed of it. What Spiegelberg has done for German, Lusk, imitating him but not copying him, has done for English readers, and we feel sure that in this country, as in America, the work will meet with a very extensive approval."—*Edinburgh Medical Journal.*

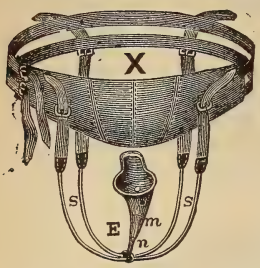
"Dr. Lusk's book is eminently viable. It cannot fail to live and obtain the honor of a second, a third, and nobody can foretell how many editions. It is the mature product of great industry and acute observation. It is by far the most learned and most complete exposition of the science and art of obstetrics written in the English language. It is a book so rich in scientific and practical information, that nobody practicing obstetrics ought to deprive himself of the advantage he is sure to gain from a frequent recourse to its pages."—*American Journal of Obstetrics.*

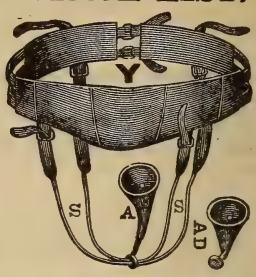
"Dr. Lusk's work is so comprehensive in design and so elaborate in execution that it must be recognized as having a status peculiarly its own among the text-books of midwifery in the English language."—*New York Medical Journal and Obstetrical Review.*

"It is a pleasure to read such a book as that which Dr. Lusk has prepared; everything pertaining to the important subject of obstetrics is discussed in a masterly and captivating manner. The illustrations are marvelous in number and design, and the typography and paper all that could be wished. We recommend the book as an excellent one, and feel confident that those who read it will be amply repaid."—*Obstetric Gazette (Cincinnati).*

1325-27x NEW YORK: D. APPLETON & CO., 1, 3 & 5 BOND STREET.

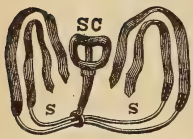
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.





Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

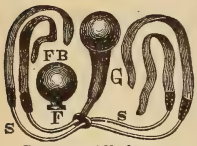
Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.



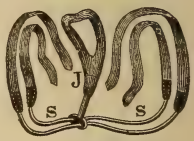
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.

Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

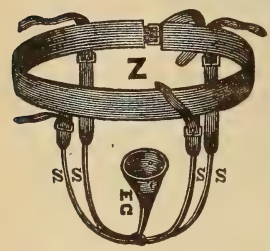


Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

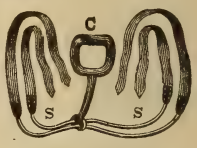


Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

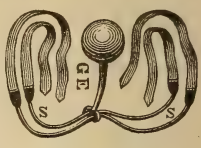
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y, $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

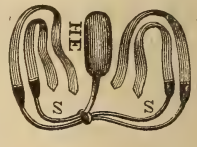


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

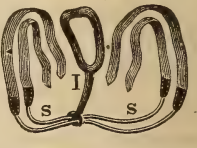


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅛; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection.—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-sixth Session of Starling Medical College will begin September 6, 1882, and continue six months. Extensive additions have recently been made to the various teaching facilities of the College. A large Hospital in the same building.

FACULTY.—S. Loving, M.D., Dean; D. Tod Gilliam, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenberg, M.D.; Henry G. Landis, M.D.; Davis Halderman, M.D.

Lecture Tickets, including matriculation, $45.

College, corner of State and Sixth Sts.; Dean's Office, 72 E. Gay St.

Letters of inquiry should be addressed to

Prof. HENRY G. LANDIS, M.D., (Registrar), Columbus, O.
May 1, 1882. 1309-1361

STATE UNIVERSITY OF IOWA,

IOWA CITY, IOWA.

MEDICAL DEPARTMENT. SESSION OF 1882-83.

Next term will commence on October 11th and close on March 7th, 1883. The new, elegant building, which in completeness is not surpassed by any medical college in the West, will be ready for use next session. There are two plans for instruction: Three term graded. Two course non graded. No preliminary term. No holiday vacation. The daily work consists of six lectures, including Clinics at Mercy Hospital, Clinical Practice, Operations upon the Cadaver, and dissecting material without extra charge. Expense per term: Lectures, $20; Matriculation, $5; Demonstrator's ticket, $10; Final Examination Fee, $25.

Woman's Medical College,

OF PENNSYLVANIA.

The 33d Winter Session will open on Tuesday, Oct. 5th, 1882, in the new college building. Clinical instruction is given in the Woman's Hospital, Pennsylvania, Wills, Philadelphia, and Orthopædic Hospitals. Spring Course of Lectures, Practical Demonstrations, and Winter Quizzes are free (except for expense of material and apparatus) to all matriculates of the year. For further information address

RACHEL L. BODLEY, A.M., M.D.,
North College Avenue and Twenty-first Street,
1309-1348 PHILADELPHIA.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

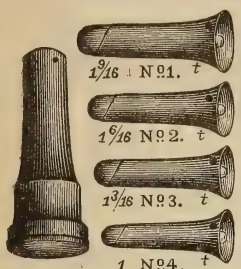
STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



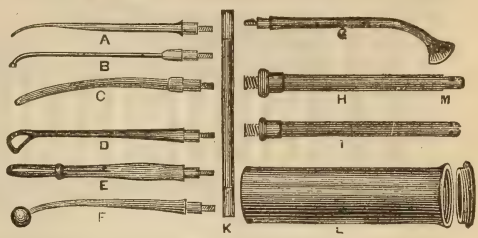
Prices—The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure—A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

THE MODERN THERAPEUTICS SERIES.

I Modern Medical Therapeutics.

A Compendium of Recent Formulæ and Specific Therapeutical Directions from the practice of eminent contemporary physicians, American and foreign. By Geo. H. NAPHEYS, A.M., M.D. *Seventh Edition.* One volume, 8vo. pp. 607. Price, cloth, $4.00; sheep, $5.00.

II Modern Surgical Therapeutics.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the Treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. *Seventh Edition* (1881). One volume, 8vo, pp. 608. Price, cloth, $4.00; sheep, $5.00.

III The Therapeutics of Gynecology and Obstetrics.

Edited by WILLIAM B. ATKINSON, M.D., etc. *Second Edition, Greatly Enlarged* (1881). One vol., 8vo. Price, cloth, $4.00; sheep, $5.00.

D. G. BRINTON,

115 South Seventh Street, Philadelphia.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

New York: 60 Maiden Lane and 21 Liberty Street.

1297-1348

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.
The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE {Aloin, 1-5 gr. / Strychnine, 1-60 gr.} . . . per 100, 60c.
A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.
The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. {Atropia 1-300 gr. / Morphia, 1-24 gr.} . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. {Atropia, 1-60 gr. / Morphia, 1-8 gr.} . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. {Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr.} . . per 100, 1.50.

McK. & R. DIURETIC. {Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr.} . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " = 30 grs. " "), . $1.60.
" " " 5 grs. (" " = 50 grs. " "), . 2.40.
We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)
WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. {Ergotin Purif., 1 gr. / Aloin, 1-2 gr.} . . . per 100, $1.25.
The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. {Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr.} . per 100, $1.25.
Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.
Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., ... per 100, 60c.
Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. {Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs.} . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, {Iodoformum, 1 gr. / Pulv. Opii, 1 gr.} . . . . per 100, $1.50.
Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.
{Ext. Coloc. Comp. pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr.}

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.
The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1 16, 1-10, 1-8, 1-6, and 1-4 gr.
We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.
Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.
A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. {Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr.} . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. {Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr.} . . per 100, $2.50.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids), in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substance	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

Messrs. Scott & Bowne,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
Rhamnus Frangula,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

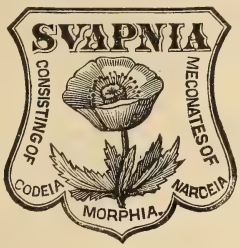
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group. Anodyne and Hypnotic Elements.	Second Group. Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

1315-

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.) ℞. Phosphori, - 1-100 gr. Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders a are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.) ℞. Iodoform, - - 1 gr Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides	$2.00
Seven large Ivory Points, well charged on both sides	1.00
Large Ivory Points, less than seven, well charged on both sides, each	.25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use	2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred)	$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, **which result was corroborated by repeated trials.**

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow **21 PLATT STREET, NEW YORK.**

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

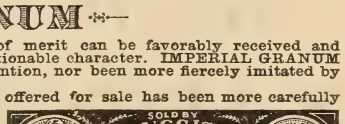
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1315-136deow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1324-1348eow

It will make Blood faster than all preparations known.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

THE JEFFERSON MEDICAL COLLEGE,

OF PHILADELPHIA.

The Fifty-eighth Session of the Jefferson Medical College will begin on Monday, October 2d, 1882, and will continue until the end of March, 1883. Preliminary Lectures will be held from Monday, 11th of September.

PROFESSORS.

S. D. GROSS, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab. (Emeritus).
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,

WM. H. PANCOAST, M.D.,
General, Descriptive, and Surgical Anatomy.

ROBERT E. ROGERS, M.D.
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D., LL.D.,
Materia Medica and General Therapeutics.

HENRY C. CHAPMAN, M.D.,
Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

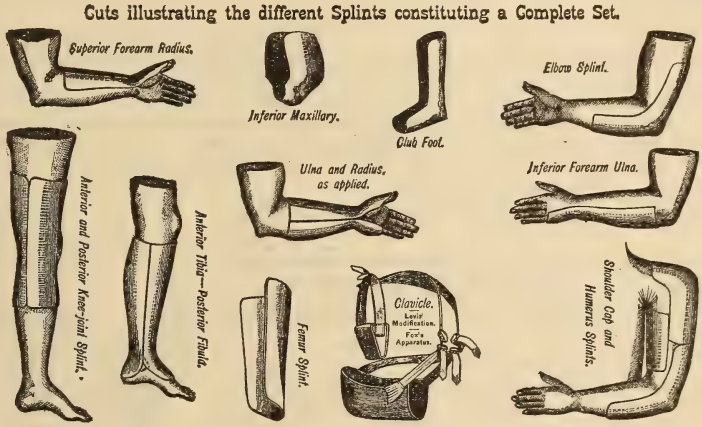
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - $25.00

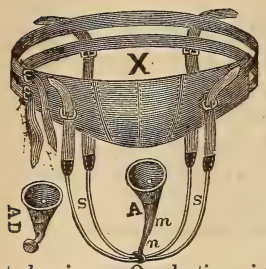
STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior culde-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also ultra uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

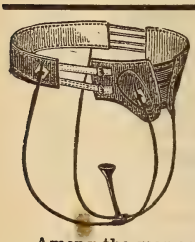
Hydrophobia. A Monograph for the Profession and the Public. By Horatio R. Bigelow, M.D. 1 Vol. 8vo. Cloth. pp. 154. Price $1.00. This volume is designed for the Physician, the Veterinarian, and the intelligent general reader.

Seiler's Microscopical Technology. Price $1.00.

D. G. BRINTON, 115 South Seventh St

DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR CALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

FEES.

PROFESSORS' TICKETS, - - - - - $75.00
GRADUATION, - - - - - - - - - 25.00

For Circulars, Address

No. 163 W. 7th Street. 1322-34

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Prof. S. G. ARMOR, M.D., Dean.

UNIVERSITY OF PENNSYLVANIA.
MEDICAL DEPARTMENT.
POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Syphilis, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

To non-matriculates of the University, a matriculation fee of - - - - - - - - - $ 5
For full post-graduate course for 8 weeks, - - 150
" any 7 of post-graduate courses for 8 weeks, 100
" " 3 " " " " 60
" " 7 " " " 16 weeks, 150
" " 3 " " " " 100
" full post-graduate course for sixteen weeks, with privilege of attending the regular courses on Morbid Anatomy, Therapeutics, Practice of Medicine, Surgery, Obstetrics, and of applying for graduation, - - - 200

For fees for separate courses named above, as well as others, including Practical Physiology, Medical Chemistry, Histology and Pathology, see p. 55 of the Catalogue, for which apply to

JAMES TYSON, M.D.,
1326-1351eow Secretary Faculty of Medicine.

UNIVERSITY OF PENNSYLVANIA.
MEDICAL DEPARTMENT.

Thirty-Sixth St. & Woodland Ave. (Darby Road), Phila.

One Hundred and Seventeenth Annual Session, 1882-83.

PROFESSORS.

JOSEPH LEIDY, M.D.	HORATIO C. WOOD, M.D.
RICHARD A. F. PENROSE, M.D.	THEODORE G. WORMLEY, M.D.
ALFRED STILLÉ, M.D.	JOHN ASHHURST, JR., M.D.
D. HAYES AGNEW, M.D.	HARRISON ALLEN, M.D.
WILLIAM PEPPER, M.D.	WILLIAM F. NORRIS, M.D.
WILLIAM GOODELL, M.D.	GEO. STRAWBRIDGE, M.D.
JAMES TYSON, M.D.	LOUIS A. DUHRING, M.D.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

For Catalogue giving full particulars, address
JAMES TYSON, M.D., Secretary,
1310-1361eow P. O. Box 2833, Philadelphia, Pa.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-1348-eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

The Physician's Clinical Record and Case Book.

FOR 100 PATIENTS.

Neatly Bound in Cloth, with Pocket and Stencil Plate, Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms of preserving the records of cases. A brass Stencil Plate accompanies each book, for rapidly sketching an outline of the body, in which may be marked, by shading, the seat of effusions, etc., or the size and position of organs, tumors, etc.

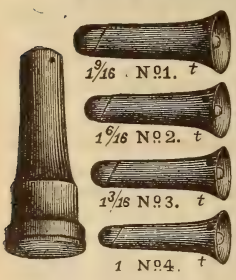
Several pages of Prefatory matter are given, presenting in the most succinct form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients; 2. Symptoms of Poisoning, etc.; 3. The Urine in Disease. Ruled Temperature Charts are added.

D. G. BRINTON, 115 S. Seventh Street, Philadelphia.

STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



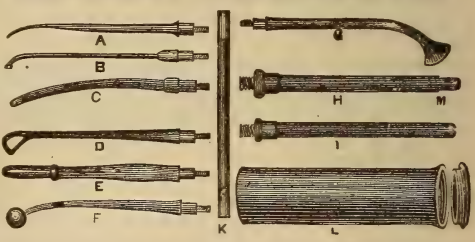
Prices—The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure—A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2 50

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

Registered Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

In corresponding with Advertisers, please mention the MEDICAL AND SURGICAL REPORTER.

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D.

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

The Weekly Medical and Surgical Reporter, - -	$5 00
The Half-Yearly Compendium of Medical Science, - -	2 50
The Reporter and Compendium, taken together, - -	7 00

☞Payable in advance, direct to the publisher.

A *Table of Contents* of a number of Half-Yearly Compendium will be sent on application to the publisher.

A single copy will be sent for examination for One Dollar.

Specimen copy of the REPORTER free on application.

☞ **Catalogue of Publications from this office mailed on application.**

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to

HOLLOW VAGINAL SUPPOSITORIES.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application in ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group. Anodyne and Hypnotic Elements.	Second Group. Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders a are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ½ gr.

THERAPEUTICS —Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

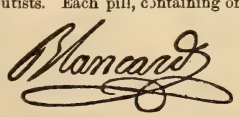
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297 1348-eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

BATTLE & CO., Chemists,

1297-1348eow **116 OLIVE STREET, ST. LOUIS, MO.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

PALATABLE—WHOLESOME—EFFICIENT

Laxativus Fructus Pastillus.
(LAXATIVE FRUIT LOZENGE.)
Properties—LAXATIVE AND CATHARTIC.
FORMULA.
CATHARTINIC ACIDUM (Pura Cassia Acutifolia) ..... vi Parts
TAMARINDUS INDICA (Tamarind) Pulp ..... iii "
PYRUS CYDONIA (Quince) Pulp ..... iii "
PRUNUS DOMESTICA (Prune) Pulp ..... viii "
GLYCERINE, C. P. ..... ii "
Prepared in 22-grain Lozenges, and covered with chocolate and sugar crystal.
Dose for Adults, one to two Lozenges.
Dose for Children, one-fourth to one Lozenge.
PREPARED BY
HETHERINGTON & CO.,
CHEMISTS. 1164 BROADWAY, NEW YORK.

Laxativus Fructus Pastillus

(LAXATIVE FRUIT LOZENGE)

SERVES AS A COOLING AND REFRESHING CORRECTIVE, FOR CONSTIPATION, BILIOUSNESS, CEREBRAL CONGESTION, INDISPOSITION, FEVERISHNESS, DIZZINESS, HEMORRHOIDS, &c.

Its action being mild (and prompt), and its taste akin to a choice bit of fruit or dessert, it is especially appreciated by ladies and children, and those who dislike pills and the usual purgative medicines.

☞ *A trial will bear out all claims advanced for the preparation, and at once establish its medicinal value.*

TRIAL SAMPLES MAILED GRATIS

NOTE.—The scarcity of the active ingredient of formula, CATHARTINIC ACIDUM, occasioned by the difficulties and high cost attending its manufacture, has prevented this agent becoming generally known; but now that its production and presentation in "Laxative Fruit Lozenge" form has been undertaken on a large scale, with improved facilities that will insure moderate prices, and as the product is distinguished by the name of Professor Dragendorff, the well-known German chemist, as its discoverer, it promises to become popular among physicians and druggists, and through them the public at large.

Put up for Dispensing in Bottles, each containing 100 Lozenges.

SOLD BY THE WHOLESALE DRUG TRADE.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

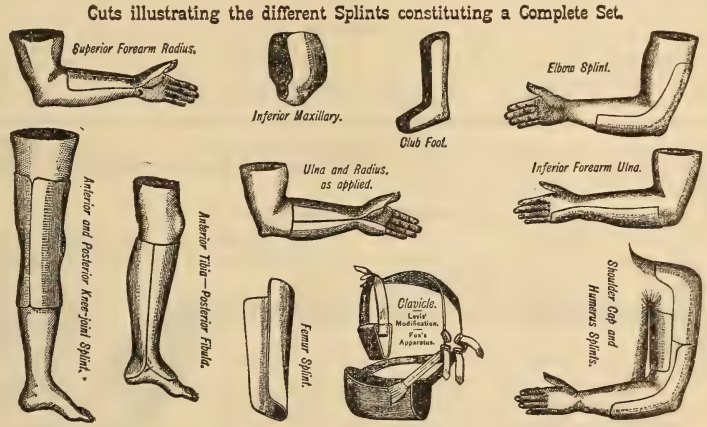
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.

Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also Intra-uterine stem cup. The cups are graded even ½ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2½ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

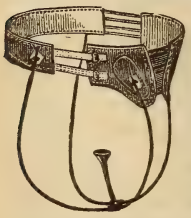
Hydrophobia. A Monograph for the Profession and the Public. By Horatio R. Bigelow, M.D. 1 Vol. 8vo. Cloth. pp. 154. Price $1.00. This volume is designed for the Physician, the Veterinarian, and the intelligent general reader.

Seiler's Microscopical Technology. Price $1.00.

D. G. BRINTON, 115 South Seventh St

DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1832

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

THE SCIENCE AND ART

OF

MIDWIFERY.

BY

WILLIAM THOMPSON LUSK, M.A., M.D.,

Professor of Obstetrics and Diseases of Women and Children in the Bellevue Hospital Medical College; Obstetric Surgeon to the Maternity and Emergency Hospitals; and Gynæcologist to the Bellevue Hospital.

COMPLETE IN ONE VOLUME, 8vo, WITH 226 ILLUSTRATIONS.

Price, cloth, $5.00; sheep, $6 00.

OPINIONS OF THE PRESS.

"It contains one of the best expositions of the obstetric science and practice of the day with which we are acquainted. Throughout the work the author shows an intimate acquaintance with the literature of obstetrics, and gives evidence of large, practical experience, great discrimination and sound judgment. We heartily recommend the book as a full and clear exposition of obstetric science and safe guide to student and practitioner."—*London Lancet.*

"This book bears evidence on every page of being the result of patient and laborious research and great personal experience, united and harmonized by the true critical or scientific spirit, and we are convinced that the book will raise the general standard of obstetric knowledge, both in his own country and in this. Whether for the student obliged to learn the theoretical part of midwifery, or for the busy practitioner seeking aid in face of practical difficulties, it is, in our opinion, the best modern work on midwifery in the English language."—*Dublin Journal of Medical Science.*

"To consider the work in detail would merely involve us in a reiteration of the high opinion we have already expressed of it. What Spiegelberg has done for German, Lusk, imitating him but not copying him, has done for English readers, and we feel sure that in this country, as in America, the work will meet with a very extensive approval."—*Edinburgh Medical Journal.*

"Dr. Lusk's book is eminently viable. It cannot fail to live and obtain the honor of a second, a third, and nobody can foretell how many editions. It is the mature product of great industry and acute observation. It is by far the most learned and most complete exposition of the science and art of obstetrics written in the English language. It is a book so rich in scientific and practical information, that nobody practicing obstetrics ought to deprive himself of the advantage he is sure to gain from a frequent recourse to its pages."—*American Journal of Obstetrics.*

"Dr. Lusk's work is so comprehensive in design and so elaborate in execution that it must be recognized as having a status peculiarly its own among the text-books of midwifery in the English language."—*New York Medical Journal and Obstetrical Review.*

"It is a pleasure to read such a book as that which Dr. Lusk has prepared; everything pertaining to the important subject of obstetrics is discussed in a masterly and captivating manner. The illustrations are marvelous in number and design, and the typography and paper all that could be wished. We recommend the book as an excellent one, and feel confident that those who read it will be amply repaid."—*Obstetric Gazette (Cincinnati).*

1325-27x NEW YORK: D. APPLETON & CO., 1, 3 & 5 BOND STREET.

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

FEES.

No. 163 W. 7th Street. 1322-84

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition,* and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones,* which act as Digestors, a rich quantity of *Phosphates,* which are valuable Nutrients, and a medium proportion of *Hops,* serving as a general Stomachic and Nervine. 1301-1352m

☞ **Sold in Drug Stores, at 25 cents per Pint Bottle.**

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

1297-1348 **211 S. Front Street, Philadelphia**

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids, in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substances	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH
HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,

RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

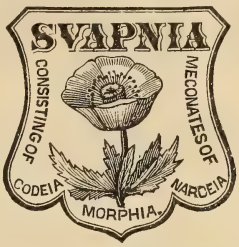
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

1315-

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

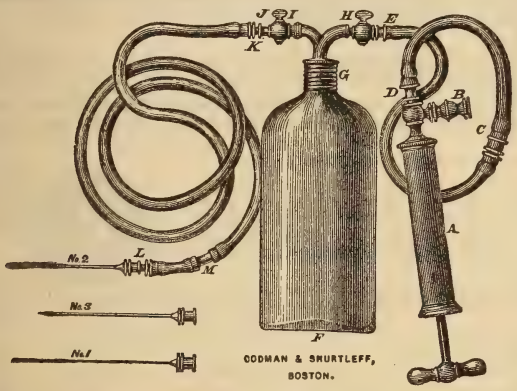

Fig. 68.

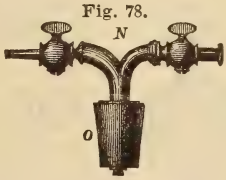
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

ORIGINALITY AND RELIABILITY. QUALITY IS OF FIRST IMPORTANCE.
HIGHEST AWARDS, MEDALS AND DIPLOMAS, OVER ALL AMERICAN AND EUROPEAN COMPETITORS.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted*; therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (waters), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

1297-1348eow

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

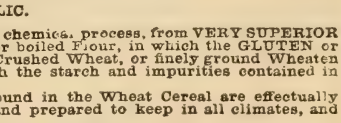
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1315-1366eow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1324-1348eow

It is the only food that will relieve the Consumptive from hunger.

It will make Blood faster than all preparations known.

BEEF PEPTONE,

IN TRANSPARENT CLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin*, of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

THE JEFFERSON MEDICAL COLLEGE,

OF PHILADELPHIA.

The Fifty-eighth Session of the Jefferson Medical College will begin on Monday, October 2d, 1882, and will continue until the end of March, 1883. Preliminary Lectures will be held from Monday, 11th of September.

PROFESSORS.

S. D. GROSS, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab. (Emeritus).
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

WM. H. PANCOAST, M.D.,
General, Descriptive, and Surgical Anatomy.

ROBERT E. ROGERS, M.D.
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D., LL.D.,
Materia Medica and General Therapeutics.

HENRY C. CHAPMAN, M.D.,
Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

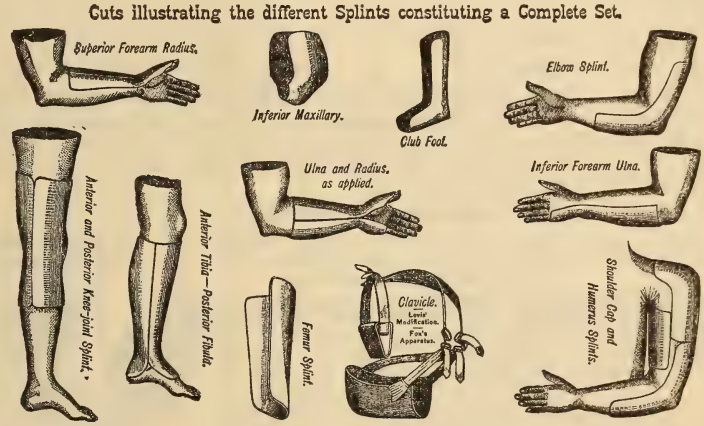
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

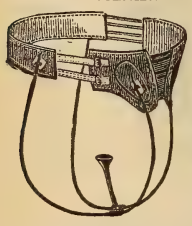
D. G. BRINTON, 115 South Seventh St



DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

FORTY-SECOND SESSION, 1882-83.

FACULTY OF MEDICINE

REV. JOHN HALL, D.D., LL.D., *Chancellor of the University, pro tem.*

ALFRED C. POST, M.D., LL.D., Professor Emeritus of Clinical Surgery, President of the Faculty.

CHARLES INSLEE PARDEE, M.D., Dean of the Faculty, Professor of Otology, Surgeon to the Manhattan Eye and Ear Hospital.

JOHN C. DRAPER, M.D., LL.D., Professor of Chemistry.

ALFRED L. LOOMIS, M.D., Professor of Pathology and Practice of Medicine, Visiting Physician to Bellevue Hospital.

WM. DARLING, M.D., LL.D., F.R.C.S., Professor of General and Descriptive Anatomy.

WILLIAM H. THOMSON, M.D., Professor of Materia Medica, Therapeutics, and Diseases of the Nervous System, Visiting Physician to Bellevue Hospital.

J. W. S. ARNOLD, M.D., Professor of Physiology and Histology.

J. WILLISTON WRIGHT, M.D., Professor of Surgery, Visiting Surgeon to Bellevue Hospital.

WM. M. POLK, M.D., Professor of Obstetrics and the Diseases of Women and Children, Gynæcologist to Bellevue Hospital.

LEWIS A. STIMSON, M.D., Professor of Surgical Pathology, Surgeon to Bellevue Hospital, Curator to Bellevue Hospital.

FANEUIL D. WEISSE, M.D., Professor of Practical and Surgical Anatomy, Surgeon to Workhouse Hospital, B. I.

STEPHEN SMITH, M.D., Professor of Clinical Surgery, Surgeon to Bellevue Hospital.

A. E. MACDONALD, LL.B., M.D., Professor of Medical Jurisprudence and Diseases of the Mind, Medical Superintendent of the New York City Asylum for the Insane.

R. A. WITTHAUS, M.D., Professor of Physiologieal Chemistry.

HERMAN KNAPP, M.D., Professor of Ophthalmology, Surgeon to the Ophthalmic Institute.

AMBROSE L. RANNEY, M.D., Adjunct Professor of Anatomy.

JOSEPH E. WINTERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY SESSION will begin on Wednesday, September 20, 1882, and end October 4, 1882. It will be conducted on the same plan as the Regular Winter Session.

THE REGULAR WINTER SESSION will begin October 4, 1882, and end about the middle of March, 1883. The Plan of Instruction consists of Didactic and Clinical Lectures, Recitations, and Laboratory Work in all subjects in which it is practicable. To put the laboratories on a proper footing, a new building has been erected, at an expense of thirty thousand dollars. It will contain laboratories fitted for instruction in Chemistry, Histology, Pathology, Materia Medica, Operative Surgery, and Gynæcology.

Two to five Didactic lectures and two or more Clinical lectures will be given each day, by members of the Faculty. In addition to the ordinary clinics, *special clinical instruction*, WITHOUT ADDITIONAL EXPENSE, will be given to the candidates for graduation during the latter part of the Regular Session. For this purpose the candidates will be divided into sections, of twenty-five members each. All who desire to avail themselves of this valuable privilege must give in their names and pay their examination fee of $30 to the Dean during the first week in November. At these special clinics students will have excellent opportunities to make and verify diagnoses, and watch the effects of treatment. They will be held in the Wards of the Hospitals and at the Public and College Dispensaries.

Each of the seven professors of the Regular Faculty will conduct a recitation on his subject one evening each week. Students are thus enabled to make up for lost lectures, and prepare themselves properly for their final examinations, without additional expense.

THE SPRING SESSION will begin about the middle of March and end the last week in May. The daily Clinics and Special Practical Courses will be the same as in the Winter Session, and there will be Lectures on Special Subjects, by the Members of the Faculty.

It is supplementary to the Regular Winter Session. Nine months of continued instruction are thus secured to all students of the University who desire a thorough course.

FEES.

For course of Lectures,	$140 00
Matriculation,	5 00
Demonstrator's Fee, including material for dissection,	10 00
Final Examination Fee,	30 00

For further particulars and circulars address the Dean,

Prof. CHAS. INSLEE PARDEE, M.D.,
University Medical College, 410 East 26th Street, New York City.

1323 3tm

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-1348-eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

No. 163 W. 7th Street. 1322-34

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

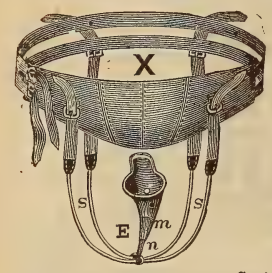
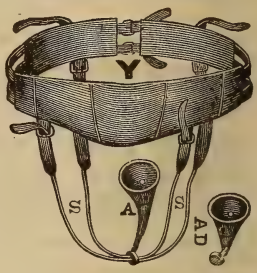
HARD RUBBER INSTRUMENTS AND PRICE LIST.



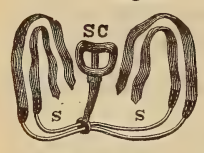


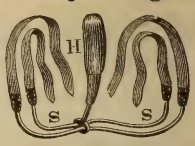
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

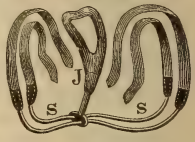
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.





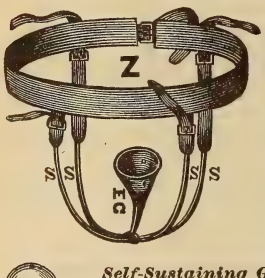
Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.



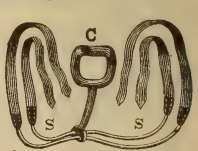
Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

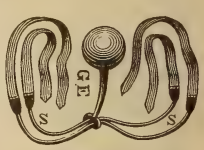
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5.50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y. $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

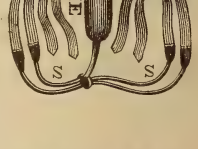


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

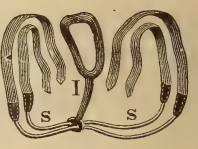


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅛; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia, 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

Registered Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,

JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

WYETH'S DIALYSED IRON.

A pure neutral solution of peroxide of iron in the colloid form; each fluid oz. contains 27.68 grs.

ADVANTAGES OF WYETH'S IRON.

"It is in itself easily digested, and its administration in all those cases where Iron is indicated, such as General Debility, Chlorosis, Hysteria, Anæmia, accompanied by Fluor Albus or Seminal Weakness, and Tardy Convalescence, Neuralgia, etc., has been followed by the best results."—Professor HAGAR.

The Lancet: "Wyeth's Preparation is excellent."

MR. THOS. BRYANT, F.R.C.S., *Senior Surgeon of Guy's Hospital, writes:* "I consider it the best and always prescribe it."

"It has no disagreeable taste or smell, and does not injure nor cause any discoloration of the teeth."—JAMES EDMUNDS, M.D., M.R.C.P.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH.

FIVE GRAINS IN EACH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc. Especially Convenient for Singers and Public Speakers.

A Single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

MORRELL MACKENZIE, M.D., London, *Senior Physician to the Hospital for Diseases of the Throat, late Physician to the London Hospital, writes:* "I have used Wyeth's Compressed Chlorate of Potash Tablets extensively during the last two years, and I consider that you have made a most valuable addition to pharmacology. The slow but uniform rate at which the Tablets dissolve renders their action peculiarly reliable, while their small size permits them to be kept in the mouth without inconvenience during speaking and even singing."

The London Medical Record says: "Wyeth's Compressed Tablets are preparations of remarkable merit. They are infinitely superior to the ordinary lozenge, being at once more compact, purer and more soluble."

"Of convenient size; they are beautifully made; and as they dissolve slowly in the mouth, are well suited for throat affections."—*The Lancet.*

"We especially recommend the Compressed Chlorate of Potash."—*British Medical Journal.*

Analytical Reports of Medical Press and Circular: "Chlorate of Potash is a remedy of acknowledged value in diphtheritic sore throat, and in inflammation of the mouth and throat induced by a depressed state of the system. It relieves hoarseness, and in many cases of fœtid breath it proves an efficient corrective. The Compressed Tablets contain exactly the theoretical amount, and are not made up with a vehicle."

Wyeth's Compressed Tablets.—Chlorate of Potash with Muriate of Ammonia.

3½ GRS. CHLORATE OF POTASH, 1½ GRS. MURIATE OF AMMONIA.

These Two Drugs are highly commended by the Profession for all forms of Sore Throat, accompanied by Ulcerations or Disordered Secretion of the Mucous Membrane.

The advantages of the combination of these two efficient remedial agents over either one administered alone will be readily appreciated by Physicians.

The Proportion of Muriate of Ammonia being less, and being intimately mixed with the less soluble salt of Chlorate of Potash, the objectionable taste of the former is not so apparent, while the medicinal effect is really just as potent.

DIRECTIONS.—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the mouth at the back of the tongue, but not at the tip, the surface of which is much more sensitive to taste and to the pungency of the ammonia salt. Children, half of one as often.

WYETH'S COMPRESSED TABLETS.—MURIATE OF AMMONIA.

THREE GRAINS EACH.

The solvent and discutient, as well as antiphlogistic powers of this salt are well known, and have led to its extensive employment, especially in Germany, in cases of Sore Throat, Bronchitis, etc., attended with abundant secretion of thick and tough mucus or phlegm.

Physicians will at once appreciate the great advantage to their patients of the local effects of this Salt slowly dissolving and coming in direct contact with the inflamed surface. It at once mitigates the cough or irritation, and lessens expectoration. Two or three of the Tablets will sometimes entirely relieve coughs that have long resisted treatment with the ordinary remedies.

DIRECTIONS.—A Tablet should be held and allowed to dissolve at the back part of the mouth, and repeated frequently when the irritation or tendency to cough is decided. In many cases half a Tablet is sufficient at one time.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH AND BORAX

(OR VOICE TABLETS).

Two-and-one-half grains of each, free from any addition or excipient,

Quickly relieves hoarseness and clears the voice. Conveniently retained in the mouth while speaking or singing.

"Excellent and reliable specimens of a distinct improvement in pharmacy."—*British Medical Journal.*

We ask the attention of Physicians to the above excellent combination, which will be found highly efficient in the relief of inflammatory affections of the mouth and throat, and other morbid states of those parts, attended with disordered secretions. The depurative effects of these remedies are well known to the Profession.

As the taste is not disagreeable, we have prepared them in the form of Compressed Tablets, thus giving the patient the full benefit of their action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent their effects, but which sometimes themselves offend the stomach.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as while the solution is but temporary, the Tablet really acts as a continuous gargle.

Children take the Tablets regularly, as they have no unpleasant taste; while the convenience of carrying them in the pocket commends them to travelers.

For Singers and Public Speakers suffering from Hoarseness or Huskiness, a single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

DIRECTIONS.—One of the Tablets placed in the mouth every hour or two, and allowed to dissolve, will quickly relieve sore mouth, inflamed tongue, and congestion of the throat.

For offensive breath, they will prove equally efficient as our Chlorate of Potash Tablets, the addition of a mild alkali, like Borax, increasing the activity of the Chlorate of Potash.

WYETH'S COMPRESSED TABLETS.—BI-CARBONATE OF SODA.

FIVE GRAINS IN EACH.

Useful in all cases where an Antacid is indicated.

The value of alkalies, and especially of the Bi-Carbonates of Potash and Soda, is very fully understood by medical men, and to a great extent also by the public. In a very large class of cases, Indigestion, Flatulency, Heartburn and Colic are due to an excess of acid in the stomach; and this condition usually constitutes an important element in Gout, Rheumatism or Gravel

DOSE.—As an antacid, one every two or three hours till relieved. For Gout, Rheumatism or Gravel, one or two thrice daily. To be swallowed with water.

WYETH'S COMPRESSED SODA-MINT, OR NEUTRALIZING TABLETS.

Each Small Tablet contains:—Soda Bi-Carb., 4 grains; Ammon. Carb., ¼ grain; Ol. Menth. Pip., ⅛ gtt.

It is well known that the most frequent cause of discomfort in the stomach is the presence of an excess of acid.

Probably the most popular prescription with practitioners for cases arising from Acidity of the Stomach, such as Colic, Flatulence in Children, Heartburn, Sick Headache, Dyspepsia, etc., is a combination of Sodæ Bi-Carb. and Ammoniæ Carb., with some pleasing adjuvant in the form of a mixture.

The Soda-Mint or Neutralizing Tablet presents this favorite and very efficacious prescription in an exceedingly agreeable form, thereby greatly facilitating its administration, particularly to children.

Travelers and persons engaged in business will highly appreciate the convenience of having this valuable remedy prescribed in such a portable form.

DOSE.—From one to two Tablets, according to age. To be *swallowed* with water.

IT WILL GIVE US PLEASURE TO FURNISH, ON APPLICATION, SUFFICIENT OF THESE TABLETS TO TEST THEIR MERITS BY ACTUAL USE.

JOHN WYETH & BROTHER, CHEMISTS, PHILADELPHIA.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

MITCHELL'S SOLUBLE MEDICATED GELATIN PREPARATIONS.

URETHRAL BOUGIES. Long size, six and one-half inches.

URETHRAL BOUGIES. Short size, three inches.

NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

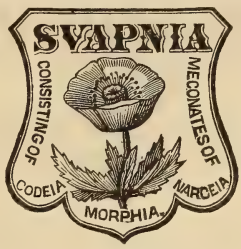
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ½ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

NEW HYPODERMIC SYRINGES.

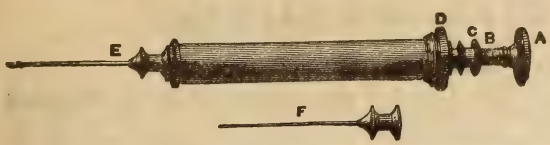

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

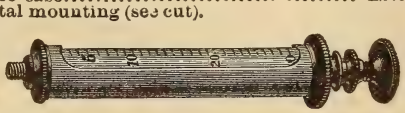
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).



No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case..... *$3.50* Postage .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially." 1297-1348eow

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

PARIS, 1867. **1868.** **1872.** **1873, VIENNA.**

Prize Medal. **Silver Medal.** **Gold Medal.** **Medal of Merit.**

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

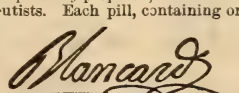
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight nas been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

BATTLE & CO., Chemists,

1297-1348eow **116 OLIVE STREET, ST. LOUIS, MO.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

PALATABLE—WHOLESOME—EFFICIENT

Laxativus Fructus Pastillus.
(LAXATIVE FRUIT LOZENGE.)
Properties: LAXATIVE AND CATHARTIC.
FORMULA:
CATHARTINIC ACIDUM (Pura Cassia Acutifolia) ..... VI Parts.
TAMARINDUS INDICA (Tamarind) Pulp ..... III "
PYRUS CYDONIA (Quince) Pulp ..... III "
PRUNUS DOMESTICA (Prune) Pulp ..... VIII "
GLYCERINE, C. P. ..... II "
Prepared in 22-grain Lozenges, and covered with chocolate and sugar crystal.
Dose for Adults, one to two Lozenges.
Dose for Children one-fourth to one Lozenge.
PREPARED BY
HETHERINGTON & CO.,
CHEMISTS. 1164 BROADWAY, NEW YORK.

Laxativus Fructus Pastillus

(LAXATIVE FRUIT LOZENGE)

SERVES AS A COOLING AND REFRESHING CORRECTIVE FOR CONSTIPATION, BILIOUSNESS, CEREBRAL CONGESTION, INDISPOSITION, FEVERISHNESS, DIZZINESS, HEMORRHOIDS, &c.

Its action being mild (and prompt), and its taste akin to a choice bit of fruit or dessert, it is especially appreciated by ladies and children, and those who dislike pills and the usual purgative medicines.

☞ *A trial will bear out all claims advanced for the preparation, and at once establish its medicinal value.*

TRIAL SAMPLES MAILED GRATIS

NOTE.—The scarcity of the active ingredient of formula, CATHARTINIC ACIDUM, occasioned by the difficulties and high cost attending its manufacture, has prevented this agent becoming generally known; but now that its production and presentation in "Laxative Fruit Lozenge" form has been undertaken on a large scale, with improved facilities that will insure moderate prices, and as the product is distinguished by the name of Professor Dragendorff, the well-known German chemist, as its discoverer, it promises to become popular among physicians and druggists, and through them the public at large.

Put up for Dispensing in Bottles, each containing 100 Lozenges.

SOLD BY THE WHOLESALE DRUG TRADE.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

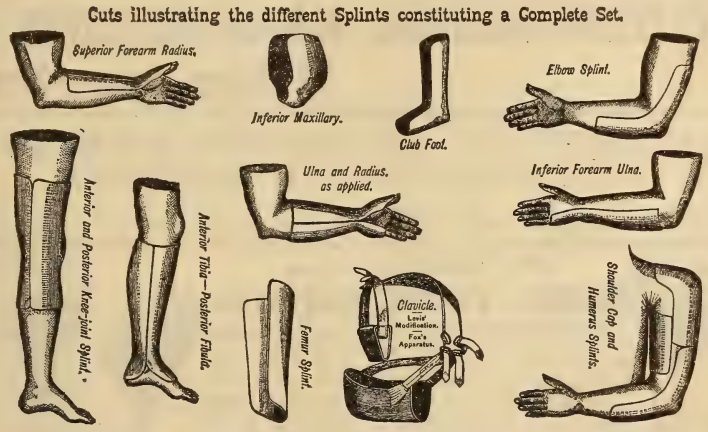
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz., $1.00 each.

DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1832

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris.

E. FOUGERA & CO., Agents, New York.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

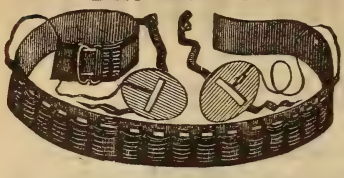
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

THE SCIENCE AND ART

OF

MIDWIFERY.

BY

WILLIAM THOMPSON LUSK, M.A., M.D.,

Professor of Obstetrics and Diseases of Women and Children in the Bellevue Hospital Medical College; Obstetric Surgeon to the Maternity and Emergency Hospitals; and Gynæcologist to the Bellevue Hospital.

COMPLETE IN ONE VOLUME, 8vo, WITH 226 ILLUSTRATIONS.

Price, cloth, $5.00; sheep, $6.00.

OPINIONS OF THE PRESS.

"It contains one of the best expositions of the obstetric science and practice of the day with which we are acquainted. Throughout the work the author shows an intimate acquaintance with the literature of obstetrics, and gives evidence of large, practical experience, great discrimination and sound judgment. We heartily recommend the book as a full and clear exposition of obstetric science and safe guide to student and practitioner."—*London Lancet.*

"This book bears evidence on every page of being the result of patient and laborious research and great personal experience, united and harmonized by the true critical or scientific spirit, and we are convinced that the book will raise the general standard of obstetric knowledge, both in his own country and in this. Whether for the student obliged to learn the theoretical part of midwifery, or for the busy practitioner seeking aid in face of practical difficulties, it is, in our opinion, the best modern work on midwifery in the English language."—*Dublin Journal of Medical Science.*

"To consider the work in detail would merely involve us in a reiteration of the high opinion we have already expressed of it. What Spiegelberg has done for German, Lusk, imitating him but not copying him, has done for English readers, and we feel sure that in this country, as in America, the work will meet with a very extensive approval."—*Edinburgh Medical Journal.*

"Dr. Lusk's book is eminently viable. It cannot fail to live and obtain the honor of a second, a third, and nobody can foretell how many editions. It is the mature product of great industry and acute observation. It is by far the most learned and most complete exposition of the science and art of obstetrics written in the English language. It is a book so rich in scientific and practical information, that nobody practicing obstetrics ought to deprive himself of the advantage he is sure to gain from a frequent recourse to its pages."—*American Journal of Obstetrics.*

"Dr. Lusk's work is so comprehensive in design and so elaborate in execution that it must be recognized as having a status peculiarly its own among the text-books of midwifery in the English language."—*New York Medical Journal and Obstetrical Review.*

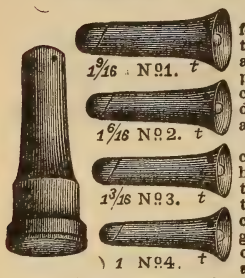
"It is a pleasure to read such a book as that which Dr. Lusk has prepared; everything pertaining to the important subject of obstetrics is discussed in a masterly and captivating manner. The illustrations are marvelous in number and design, and the typography and paper all that could be wished. We recommend the book as an excellent one, and feel confident that those who read it will be amply repaid."—*Obstetric Gazette (Cincinnati).*

1325-27x NEW YORK: D. APPLETON & CO., 1, 3 & 5 BOND STREET.

STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



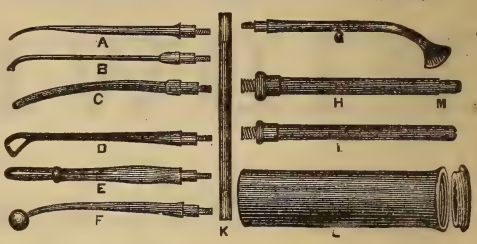
Prices —The series of four speculums and conductors, encased, $12 00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2 50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

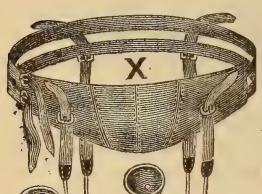
D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

STAUFER'S

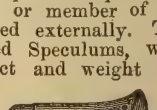
SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also Extra uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.



Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

JOHN A. MURPHY, M.D., Dean,
No. 163 W. 7th Street. 1322-34

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEDICAL DEPARTMENT. SESSION OF 1882-83.

Next term will commence on October 11th and close on March 7th, 1883. The new, elegant building, which in completeness is not surpassed by any medical college in the West, will be ready for use next session. There are two plans for instruction: Three term graded. Two course non-graded. No preliminary term. No holiday vacation. The daily work consists of six lectures, including Clinics at Mercy Hospital, Clinical Practice, Operations upon the Cadaver, and dissecting material without extra charge. Expense per term: Lectures, $20; Matriculation, $5; Demonstrator's ticket, $10; Final Examination Fee, $25.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

THE MODERN THERAPEUTIC SERIES.

I MODERN MEDICAL THERAPEUTICS.

III THE THERAPEUTICS OF GYNECOLOGY and OBSTETRICS.

Edited by WILLIAM B. ATKINSON, M.D., etc. *Second Edition, Greatly Enlarged* (1881). One vol., 8vo. Price, cloth, $4.00; sheep, $5.00.

D. G BRINTON,
115 South Seventh St., Philadelphia.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.

The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE { Aloin, 1-5 gr. / Strychnine, 1-60 gr. } . . . per 100, 60c.

A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.

The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. { Atropia 1-300 gr. / Morphia, 1-24 gr. } . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. { Atropia, 1-60 gr. / Morphia, 1-8 gr. } . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. { Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr. } . . per 100, 1.50.

McK. & R. DIURETIC. { Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr. } . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " = 30 grs. " "), . $1.60
" " " 5 grs. (" " = 50 grs. " "), . 2.40.

We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of official fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)

WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. { Ergotin Purif., 1 gr. / Aloin, 1-2 gr. } . . . per 100, $1.25.

The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. { Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr. } . per 100, $1.25.

Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.

Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., ... per 100, 60c.

Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. { Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs. } . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, { Iodoformum, 1 gr. / Pulv. Opii, 1 gr. } . . . . per 100, $1.50.

Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.

{ Ext. Coloc. Comp. pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr. }

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.

The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1 16, 1-10, 1-8, 1-6, and 1-4 gr.

We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.

Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.

A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr. } . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr. } . . per 100, $2.50.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids), in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substance	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen.—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH
HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

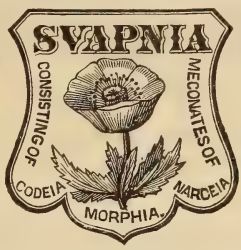
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides..... $2.00
Seven large Ivory Points, well charged on both sides..... 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred)..... $2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

1315-1366eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

THE JEFFERSON MEDICAL COLLEGE,

OF PHILADELPHIA.

The Fifty-eighth Session of the Jefferson Medical College will begin on Monday, October 2d, 1882, and will continue until the end of March, 1883. Preliminary Lectures will be held from Monday, 11th of September.

PROFESSORS.

S. D. GROSS, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab. (Emeritus).
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

WM. H. PANCOAST, M.D.,
General, Descriptive, and Surgical Anatomy.

ROBERT E. ROGERS, M.D.
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D., LL.D.,
Materia Medica and General Therapeutics.

HENRY C. CHAPMAN, M.D.,
Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

1318-1330 eow **ELLERSLIE WALLACE, DEAN.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk covering thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

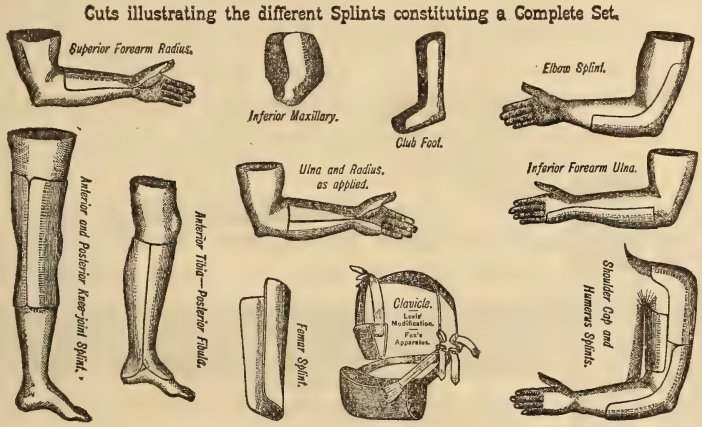
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

THE MODERN THERAPEUTIC SERIES.

I MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions from the practice of eminent contemporary physicians, American and foreign. By Geo. H. NAPHEYS, A.M., M.D. *Seventh Edition.* One volume, 8vo. pp. 607. Price, cloth, $4.00; sheep, $5.00.

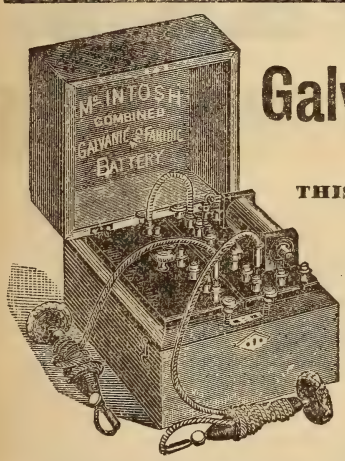
II MODERN SURGICAL THERAPEUTICS.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the Treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. *Seventh Edition* (1881). One volume, 8vo, pp. 608. Price, cloth, $4.00; sheep, $5.00.

III THE THERAPEUTICS OF GYNEC LOGY and OBSTETRICS.

Edited by WILLIAM B. ATKINSON, M.D., etc. *Second Edition, Greatly Enlarged* (1881). One vol., 8vo. Price, cloth, $4.00; sheep, $5.00.

D. G BRINTON,
115 South Seventh St., Philadelphia.



McINTOSH'S COMBINED
Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen ce ls, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Prof. S. G. ARMOR, M.D., Dean.

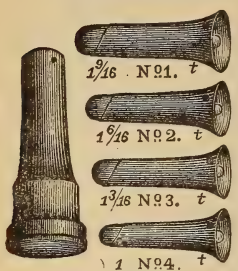
STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



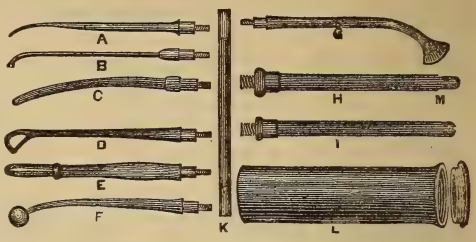
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2 50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

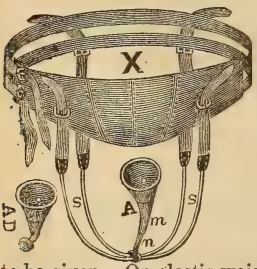
D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

STAUFER'S

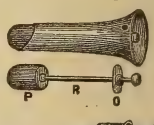
SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also extra-uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.



Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

RARE OPPORTUNITY—FOR SALE, IN A large city in the anthracite coal fields of Pennsylvania, a bona fide practice worth $4000 a year, cash. $1400 of this amount is received from a contract that the vendor can transfer. Good introduction given. Location, house, etc., first-class, at a reasonable rent. Good reasons for selling. Price for the good will and introduction $1200, half cash and the balance in six months on approved security. Apply for further particulars to "Opium," at the MEDICAL AND SURGICAL REPORTER, Philadelphia, Pa. 1330-33

A MANUAL OF OPHTHALMIC PRACTICE,

BY HENRY S. SCHELL, M. D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc.

With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on ophthalmic practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

EXTRACT FROM THE PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of Ophthalmology, and to describe those methods of treatment which he has become accustomed to rely upon from personal experience of their value.

CONTENTS.

CHAPTER I.—Anatomy and Physiology of the Eye. CHAPTER II.—Affections of the Eyelids. CHAPTER III.—Disorders of the Lachrymal Apparatus. CHAPTER IV.—Disorders of the Conjunctiva. CHAPTER V.—The Ophthalmoscope. CHAPTER VI.—Refraction and Accommodation and their Anomalies. CHAPTER VII.—Disorders of the Ocular Nerves and Muscles. CHAPTER VIII.—Diseases of the Cornea and Sclerotic. CHAPTER IX.—Diseases of the Iris, Choroid and Ciliary Body. CHAPTER X.—Diseases of the Crystalline Lens. CHAPTER XI.—Diseases of the Vitreous. CHAPTER XII.—Diseases of the Retina and Optic Nerve. CHAPTER XIII.—Disorders of the Eyeball. CHAPTER XIV.—Diseases of the Orbit.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

To non-matriculates of the University, a matriculation fee of - - - - - - - - - $ 5
For full post-graduate course for 8 weeks, - - 150

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

For Catalogue giving full particulars, address

JAMES TYSON, M.D., Secretary,

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

P. O. BOX 1574. 1244-1295eow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Full descriptive Circulars of these articles will be furnished to the medical profession by enclosing stamp to

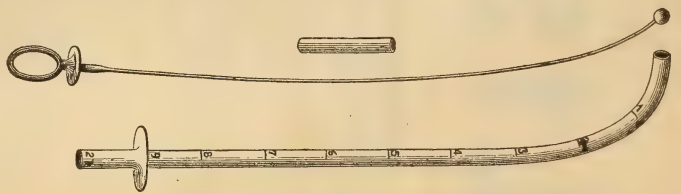
INTRA-URETHRINE PENCILS AND CARRIER.



PROSTATIC BOUGIES AND CARRIER.

TO PHYSICIANS.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

NOW SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.) ℞. Phosphori, - 1-100 gr. Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.) ℞. Iodoform, - - 1 gr Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

MATHEY-CAYLUS' GLUTEN

SILVER

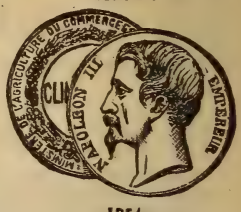
1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,

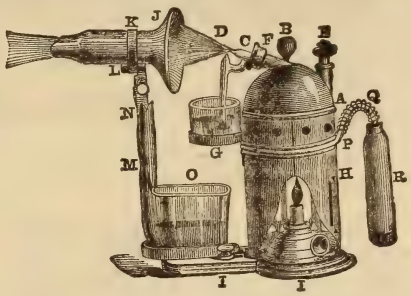
ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER (Patented March 24, 1868.)

All its joints are hard-soldered.

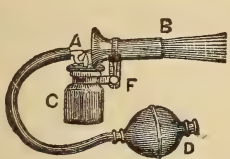
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

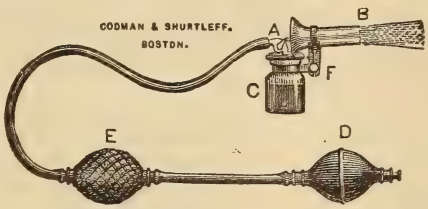
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

PARIS, 1867. **1868.** **1872.** **1873, VIENNA.**

Prize Medal. **Silver Medal.** **Gold Medal.** **Medal of Merit.**

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

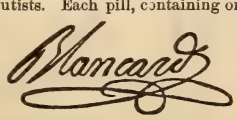
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

BATTLE & CO., Chemists,

1297-1348eow **116 OLIVE STREET, ST. LOUIS, MO.**

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

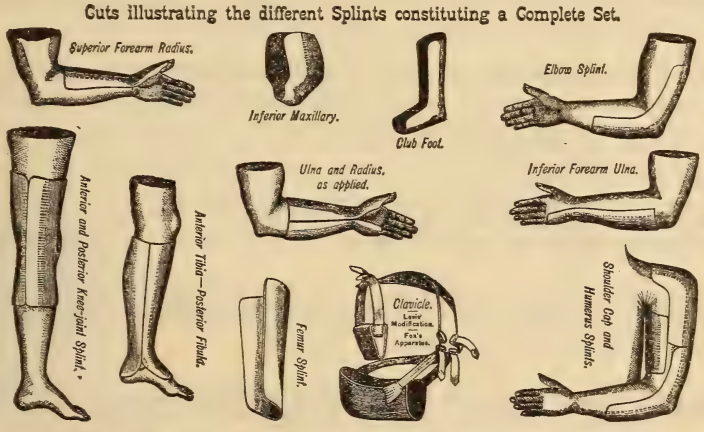
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz., $1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - - 10.00

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

THE MODERN THERAPEUTIC SERIES.

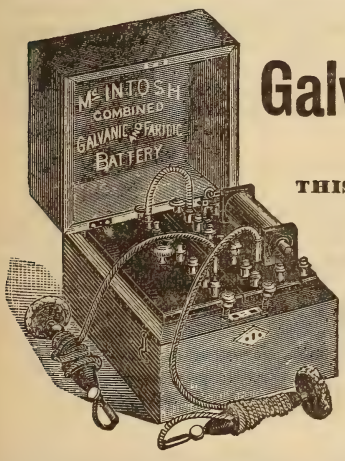
115 South Seventh St., Philadelphia.



McINTOSH'S COMBINED
Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

FEES.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

FACULTY OF MEDICINE

REV. JOHN HALL, D.D., LL.D., *Chancellor of the University, pro tem.*

ALFRED C. POST, M.D., LL.D., Professor Emeritus of Clinical Surgery, President of the Faculty.

CHARLES INSLEE PARDEE, M.D., Dean of the Faculty, Professor of Otology, Surgeon to the Manhattan Eye and Ear Hospital.

JOHN C. DRAPER, M.D., LL.D., Professor of Chemistry.

ALFRED L. LOOMIS, M.D., Professor of Pathology and Practice of Medicine, Visiting Physician to Bellevue Hospital.

WM. DARLING, M.D., LL.D., F.R.C.S., Professor of General and Descriptive Anatomy.

WILLIAM H. THOMSON, M.D., Professor of Materia Medica, Therapeutics, and Diseases of the Nervous System, Visiting Physician to Bellevue Hospital.

J. W. S. ARNOLD, M.D., Professor of Physiology and Histology.

J. WILLISTON WRIGHT, M.D., Professor of Surgery, Visiting Surgeon to Bellevue Hospital.

WM. M. POLK, M.D., Professor of Obstetrics and the Diseases of Women and Children, Gynæcologist to Bellevue Hospital.

LEWIS A. STIMSON, M.D., Professor of Surgical Pathology, Surgeon to Bellevue Hospital, Curator to Bellevue Hospital.

FANEUIL D. WEISSE, M.D., Professor of Practical and Surgical Anatomy, Surgeon to Workhouse Hospital, B. I.

STEPHEN SMITH, M.D., Professor of Clinical Surgery, Surgeon to Bellevue Hospital.

A. E. MACDONALD, LL.B., M.D., Professor of Medical Jurisprudence and Diseases of the Mind, Medical Superintendent of the New York City Asylum for the Insane.

R. A. WITTHAUS, M.D., Professor of Physiologieal Chemistry.

HERMAN KNAPP, M.D., Professor of Ophthalmology, Surgeon to the Ophthalmic Institute.

AMBROSE L. RANNEY, M.D., Adjunct Professor of Anatomy.

JOSEPH E. WINTERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY SESSION will begin on Wednesday, September 20, 1882, and end October 4, 1882. It will be conducted on the same plan as the Regular Winter Session.

THE REGULAR WINTER SESSION will begin October 4, 1882, and end about the middle of March, 1883. The Plan of Instruction consists of Didactic and Clinical Lectures, Recitations, and Laboratory Work in all subjects in which it is practicable. To put the laboratories on a proper footing, a new building has been erected, at an expense of thirty thousand dollars. It will contain laboratories fitted for instruction in Chemistry, Histology, Pathology, Materia Medica, Operative Surgery, and Gynæcology.

Two to five Didactic lectures and two or more Clinical lectures will be given each day, by members of the Faculty. In addition to the ordinary clinics, *special clinical instruction*, WITHOUT ADDITIONAL EXPENSE, will be given to the candidates for graduation during the latter part of the Regular Session. For this purpose the candidates will be divided into sections, of twenty-five members each. All who desire to avail themselves of this valuable privilege must give in their names and pay their examination fee of $30 to the Dean during the first week in November. At these special clinics students will have excellent opportunities to make and verify diagnoses, and watch the effects of treatment. They will be held in the Wards of the Hospitals and at the Public and College Dispensaries.

Each of the seven professors of the Regular Faculty will conduct a recitation on his subject one evening each week. Students are thus enabled to make up for lost lectures, and prepare themselves properly for their final examinations, without additional expense.

THE SPRING SESSION will begin about the middle of March and end the last week in May. The daily Clinics and Special Practical Courses will be the same as in the Winter Session, and there will be Lectures on Special Subjects, by the Members of the Faculty.

It is supplementary to the Regular Winter Session. Nine months of continued instruction are thus secured to all students of the University who desire a thorough course.

FEES.

For course of Lectures,	$140 00
Matriculation,	5 00
Demonstrator's Fee, including material for dissection,	10 00
Final Examination Fee,	30 00

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

New York: 60 Maiden Lane and 21 Liberty Street.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

1297-134Seow.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids, in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	1[illegible]82
Ash or Mineral Substance	1[illegible]56
Peptones, total	38[illegible]5
Soluble Extractive Matter	34[illegible]7
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

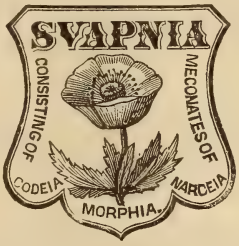
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.) ℞. Phosphori, - 1-100 gr. Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.) ℞. Iodoform, - - 1 gr Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

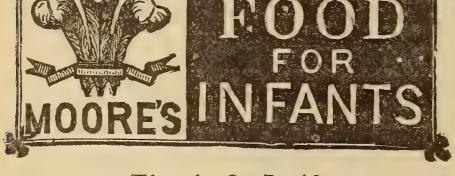
Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.



Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London.

Agents for America, E. FOUGERA & CO., NEW YORK.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

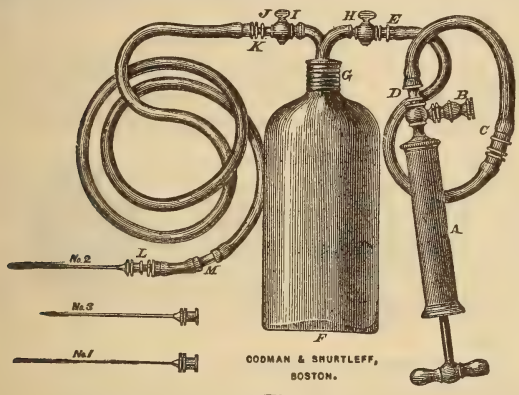

Fig. 68.

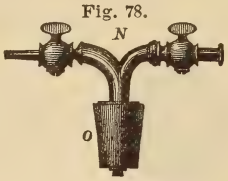
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

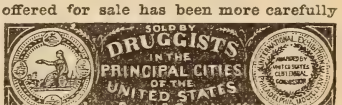
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1315-1366eow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON. 1324-1348eow

It is the only food that will relieve the Consumptive from hunger.

It will make Blood faster than all preparations known.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the ***Crystal Pepsin,*** of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

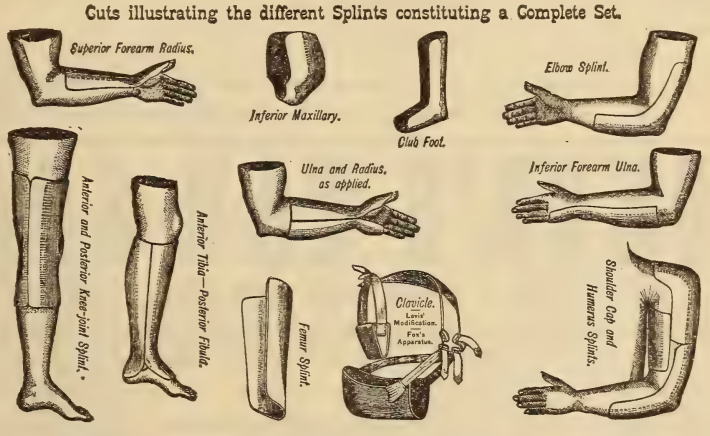
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars.
Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,

$1.00 each.

THE BEST.

ANGLO-SWISS MILK FOOD.

Used by more than 1500 Physicians in New York City alone

During the past year, with uniformly favorable results.

Prescribed by leading Practitioners of all Schools, and used in prominent Institutions throughout the Country.

CHEMICAL ANALYSIS AND OTHER RELIABLE TESTIMONY

Moisture	5	to	6 per ct.	Carbo-hydrates, insoluble in water	15	to	16 per ct.
Nitrogenous matter (Nitrogen 2.25 to 2.35).	14.5	"	15 "	Fat	4	"	5 "
Carbo-hydrates, soluble in water	54	"	55 "	Ash (inclusive of 0.6 Phosphoric Ac[id])	2	"	2.5 "

"The proportion of nitrogenous matter or plastic aliments to carbo-hydrates or respiratory constituents in mother's milk is 1 : 4.5, and in this food the proportion is practically the same, namely, 1 : 5.7. The fat, as a respiratory substance, is here reduced to the equivalent of starch.

"My analysis perfectly agrees with the analysis given on their labels, and bears witness to the excellent and rational manner in which this food is compounded." DR. E. GEISSLER, Dresden, April 10th, 1880.

"I have used Anglo-Swiss Milk Food in my practice, and commend it with confidence to those who may need it for Infants or Invalids. The introduction of the Anglo-Swiss Milk Food into America is a great blessing to sick children, weary mothers and almost discouraged physicians, for medicine will not take the place of food."—
E. A. Jennings, M.D., Provident Dispensary, 62 West 14th St., New York.

"Used in New York Infant Asylum.—*J. Lewis Smith*, M.D.

"Has yielded most favorable results."—*J. C. Guernsey*, M.D., *Philadelphia.*

"The Diarrhœa had been persistent for four months, in spite of the use of other foods. After using two days the evacuations became normal, and the puny child is now plump and healthy."—*Geo. M. Ockford*, M.D., *Vincennes, Ind.*

"Used in our Seaside Nursery. It nourishes and strengthens every child to whom it is given."—*John W. Kramer*, M.D., *Master of St. John's Guild.*

"Our little ones love it. It regulates and strengthens the bowels."—*Sisters of Charity, St. Vincent's Home, Philadelphia.*

"We find that it agrees with each case."—*M. Spencer, Matron, Philadelphia Infants' Home.*

SAMPLE FURNISHED TO PHYSICIANS GRATIS **ADDRESS ANGLO-SWISS COND. MILK CO., P. O. BOX 3773, N. Y.**

1303-1354 m **Made at Cham, Switzerland. Sold by Druggists and Grocers Generally.**

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.*

It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition,* and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones,* which act as Digestors, a rich quantity of *Phosphates,* which are valuable Nutrients, and a medium proportion of *Hops,* serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1229-1348

Established 1821.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-sixth Session of Starling Medical College will begin September 6, 1882, and continue six months. Extensive additions have recently been made to the various teaching facilities of the College. A large Hospital in the same building.

FACULTY.—S. Loving, M.D., Dean; D. Tod Gilliam, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenberg, M.D.; Henry G. Landis, M.D.; Davis Halderman, M.D.

Lecture Tickets, including matriculation, $45.

College, corner of State and Sixth Sts.; Dean's Office, 72 E. Gay St.

Letters of inquiry should be addressed to

Prof. HENRY G. LANDIS, M.D., (Registrar), Columbus, O.

May 1, 1882. 1309-1361

STATE UNIVERSITY OF IOWA,

IOWA CITY, IOWA.

MEDICAL DEPARTMENT. SESSION OF 1882-83.

Next term will commence on October 11th and close on March 7th, 1883. The new, elegant building, which in completeness is not surpassed by any medical college in the West, will be ready for use next session. There are two plans for instruction: Three term graded. Two course non graded. No preliminary term. No holiday vacation. The daily work consists of six lectures, including Clinics at Mercy Hospital, Clinical Practice, Operations upon the Cadaver, and dissecting material without extra charge. Expense per term: Lectures, $20; Matriculation, $5; Demonstrator's ticket, $10; Final Examination Fee, $25.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

H. T. HOYT,

FINE TAILORING,

1297-1348 CHESTNUT STREET, WEST OF FIFTEENTH ST.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

WYETH'S DIALYSED IRON.

A pure neutral solution of peroxide of iron in the colloid form; each fluid oz. contains 27.68 grs.

ADVANTAGES OF WYETH'S IRON.

"It is in itself easily digested, and its administration in all those cases where Iron is indicated, such as General Debility, Chlorosis, Hysteria, Anæmia, accompanied by Fluor Albus or Seminal Weakness, and Tardy Convalescence, Neuralgia, etc., has been followed by the best results."—Professor HAGAR.

The Lancet: "Wyeth's Preparation is excellent."

MR. THOS. BRYANT, F.R.C.S., *Senior Surgeon of Guy's Hospital, writes:* "I consider it the best and always prescribe it."

"It has no disagreeable taste or smell, and does not injure nor cause any discoloration of the teeth."—JAMES EDMUNDS, M.D., M.R.C.P.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH.

FIVE GRAINS IN EACH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc. Especially Convenient for Singers and Public Speakers.

A Single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

MORRELL MACKENZIE, M.D., London, *Senior Physician to the Hospital for Diseases of the Throat, late Physician to the London Hospital, writes:* "I have used Wyeth's Compressed Chlorate of Potash Tablets extensively during the last two years, and I consider that you have made a most valuable addition to pharmacology. The slow but uniform rate at which the Tablets dissolve renders their action peculiarly reliable, while their small size permits them to be kept in the mouth without inconvenience during speaking and even singing."

The London Medical Record says: "Wyeth's Compressed Tablets are preparations of remarkable merit. They are infinitely superior to the ordinary lozenge, being at once more compact, purer and more soluble."

"Of convenient size; they are beautifully made; and as they dissolve slowly in the mouth, are well suited for throat affections."—*The Lancet.*

"We especially recommend the Compressed Chlorate of Potash."—*British Medical Journal.*

Analytical Reports of Medical Press and Circular: "Chlorate of Potash is a remedy of acknowledged value in diphtheritic sore throat, and in inflammation of the mouth and throat induced by a depressed state of the system. It relieves hoarseness, and in many cases of fœtid breath it proves an efficient corrective. The Compressed Tablets contain exactly the theoretical amount, and are not made up with a vehicle."

Wyeth's Compressed Tablets.—Chlorate of Potash with Muriate of Ammonia.

3½ GRS. CHLORATE OF POTASH, 1¼ GRS. MURIATE OF AMMONIA.

These Two Drugs are highly commended by the Profession for all forms of Sore Throat, accompanied by Ulcerations or Disordered Secretion of the Mucous Membrane.

The advantages of the combination of these two efficient remedial agents over either one administered alone will be readily appreciated by Physicians.

The Proportion of Muriate of Ammonia being less, and being intimately mixed with the less soluble salt of Chlorate of Potash, the objectionable taste of the former is not so apparent, while the medicinal effect is really just as potent.

DIRECTIONS.—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the mouth at the back of the tongue, but not at the tip, the surface of which is much more sensitive to taste and to the pungency of the ammonia salt. Children, half of one as often.

WYETH'S COMPRESSED TABLETS.—MURIATE OF AMMONIA.

THREE GRAINS EACH.

The solvent and discutient, as well as antiphlogistic powers of this salt are well known, and have led to its extensive employment, especially in Germany, in cases of Sore Throat, Bronchitis, etc., attended with abundant secretion of thick and tough mucus or phlegm.

Physicians will at once appreciate the great advantage to their patients of the local effects of this Salt slowly dissolving and coming in direct contact with the inflamed surface. It at once mitigates the cough or irritation, and lessens expectoration. Two or three of the Tablets will sometimes entirely relieve coughs that have long resisted treatment with the ordinary remedies.

DIRECTIONS.—A Tablet should be held and allowed to dissolve at the back part of the mouth, and repeated frequently when the irritation or tendency to cough is decided. In many cases half a Tablet is sufficient at one time.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH AND BORAX
(OR VOICE TABLETS).

Two-and-one-half grains of each, free from any addition or excipient,

Quickly relieves hoarseness and clears the voice. Conveniently retained in the mouth while speaking or singing.

"Excellent and reliable specimens of a distinct improvement in pharmacy."—*British Medical Journal.*

We ask the attention of Physicians to the above excellent combination, which will be found highly efficient in the relief of inflammatory affections of the mouth and throat, and other morbid states of those parts, attended with disordered secretions. The depurative effects of these remedies are well known to the Profession.

As the taste is not disagreeable, we have prepared them in the form of Compressed Tablets, thus giving the patient the full benefit of their action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent their effects, but which sometimes themselves offend the stomach.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as while the solution is but temporary, the Tablet really acts as a continuous gargle.

Children take the Tablets regularly, as they have no unpleasant taste; while the convenience of carrying them in the pocket commends them to travelers.

For Singers and Public Speakers suffering from Hoarseness or Huskiness, a single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

DIRECTIONS.—One of the Tablets placed in the mouth every hour or two, and allowed to dissolve, will quickly relieve sore mouth, inflamed tongue, and congestion of the throat.

For offensive breath, they will prove equally efficient as our Chlorate of Potash Tablets, the addition of a mild alkali, like Borax, increasing the activity of the Chlorate of Potash.

WYETH'S COMPRESSED TABLETS.—BI-CARBONATE OF SODA.

FIVE GRAINS IN EACH.

Useful in all cases where an Antacid is indicated.

The value of alkalies, and especially of the Bi-Carbonates of Potash and Soda, is very fully understood by medical men, and to a great extent also by the public. In a very large class of cases, Indigestion, Flatulency, Heartburn and Colic are due to an excess of acid in the stomach; and this condition usually constitutes an important element in Gout, Rheumatism or Gravel

DOSE.—As an antacid, one every two or three hours till relieved. For Gout, Rheumatism or Gravel, one or two thrice daily. To be swallowed with water.

WYETH'S COMPRESSED SODA-MINT, OR NEUTRALIZING TABLETS.

Each Small Tablet contains:—Soda Bi-Carb., 4 grains; Ammon. Carb., ¼ grain; Ol. Menth. Pip., ⅛ gtt.

It is well known that the most frequent cause of discomfort in the stomach is the presence of an excess of acid.

Probably the most popular prescription with practitioners for cases arising from Acidity of the Stomach, such as Colic, Flatulence in Children, Heartburn, Sick Headache, Dyspepsia, etc., is a combination of Sodæ Bi-Carb. and Ammoniæ Carb., with some pleasing adjuvant in the form of a mixture.

The Soda-Mint or Neutralizing Tablet presents this favorite and very efficacious prescription in an exceedingly agreeable form, thereby greatly facilitating its administration, particularly to children.

Travelers and persons engaged in business will highly appreciate the convenience of having this valuable remedy prescribed in such a portable form.

DOSE.—From one to two Tablets, according to age. To be *swallowed* with water.

IT WILL GIVE US PLEASURE TO FURNISH, ON APPLICATION, SUFFICIENT OF THESE TABLETS TO TEST THEIR MERITS BY ACTUAL USE.

JOHN WYETH & BROTHER, CHEMISTS, PHILADELPHIA.

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

PARKE, DAVIS & CO.,

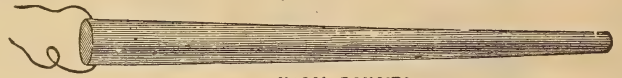
* WORKING BULLETIN.—A pamphlet containing the botanical description of *each plant*, with chemical, microscopical, physiological, therapeutical investigations, etc., etc. Sent free, by mail, on application.

MITCHELL'S SOLUBLE MEDICATED GELATIN PREPARATIONS.

URETHRAL BOUGIES. Long size, six and one-half inches.

URETHRAL BOUGIES. Short size, three inches.



NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Full descriptive Circulars of these articles will be furnished to the medical profession by enclosing stamp to

HOLLOW VAGINAL SUPPOSITORIES.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis. Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,

NEW HYPODERMIC SYRINGES.

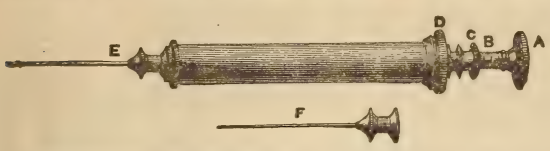

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

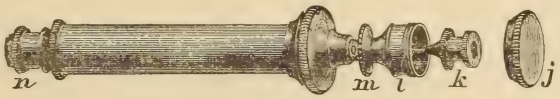
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02
No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).		

No. 11.

		Postage
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS. E. FOUGERA & CO., 30 N. William St., N. Y.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris.

E. FOUGERA & CO., Agents, New York.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal. Silver Medal. Gold Medal. Medal of Merit.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

BATTLE & CO., Chemists,

1297-1348eow **116 OLIVE STREET, ST. LOUIS, MO.**

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

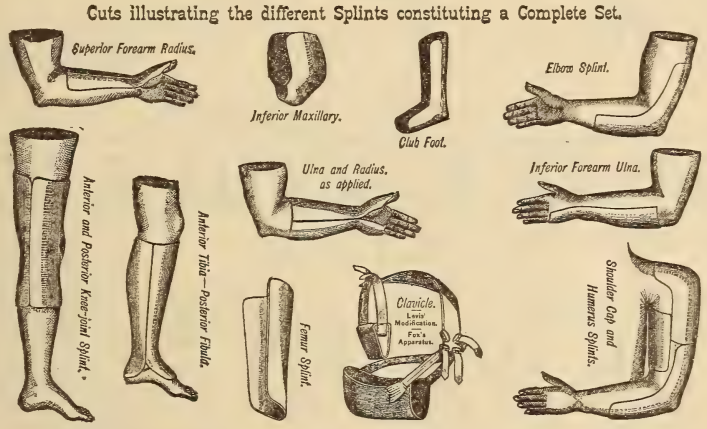
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS, on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk covering thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

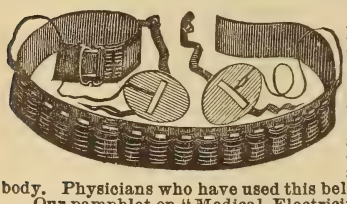
ELECTRO-MEDICAL MANUFACTURING CO.,

1281-m 38 Union Square, New York.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

FINE TAILORING,

1297-1348 **CHESTNUT STREET, WEST OF FIFTEENTH ST.**

A MANUAL OF OPHTHALMIC PRACTICE,

BY HENRY S. SCHELL, M. D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc.

With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on ophthalmic practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

EXTRACT FROM THE PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of Ophthalmology, and to describe those methods of treatment which he has become accustomed to rely upon from personal experience of their value.

CONTENTS.

CHAPTER I.—Anatomy and Physiology of the Eye. CHAPTER II.—Affections of the Eyelids. CHAPTER III.—Disorders of the Lachrymal Apparatus. CHAPTER IV.—Disorders of the Conjunctiva. STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.

Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also ultra-uterine stem cup. The cups are graded even ½ inch, from 1½ to 2½ inches. Globe Tops from 1 to 2½ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

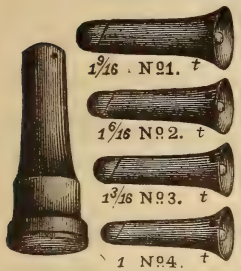
Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



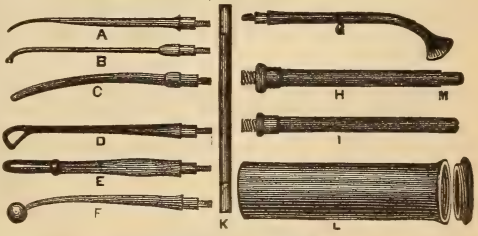
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eighths inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E. F. Houghton & Co. Philadelphia, U. S. A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.
The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.
Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.
Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.
Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms:—

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides..... 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles. inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

1274-tf

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1324-1348eow

It will make Blood faster than all preparations known.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the ***Crystal Pepsin,*** of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

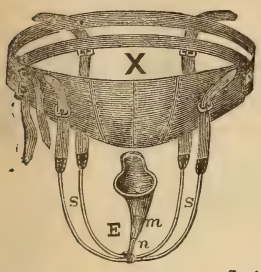
CARL L. JENSEN, M.D., PH.G.,

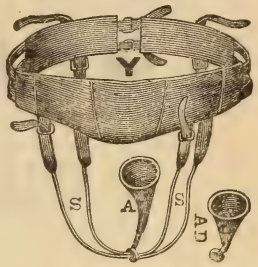
865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.



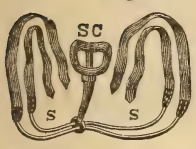


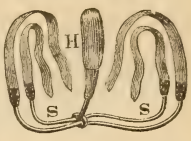
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7 00.

Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

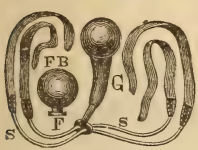
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

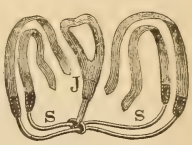
Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.





Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

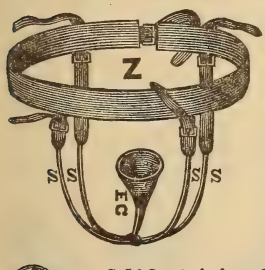




Transformation —The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B. with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

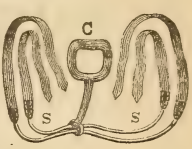
Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

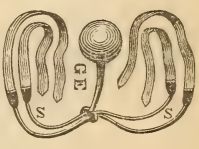
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y, $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E. or H E.

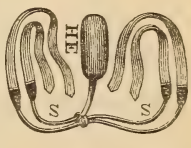
Belts.—X, and Y have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.



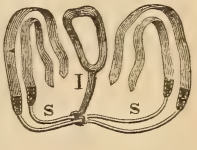


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia, 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars.
Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk covering thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

McINTOSH'S COMBINED
Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. This Battery is constructed on an improved plan, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

SESSION OF 1882-83.

The next Session will commence October 3d, 1882, preceded by a Preliminary Session from Sept. 18th.

The College building has recently been much enlarged and remodeled, and is now well adapted in all respects for medical teaching.

A large Chemical Laboratory, a well furnished Histological Laboratory and extensive Dissecting Rooms, provide excellent facilities for practical study in these important branches.

CLINICAL STUDY.

At least two distinct clinics are held each day in the College Building, at which patients in all departments of Medicine and Surgery are treated, and students have opportunity to acquire practical knowledge of the various methods of examination and manipulation required in modern practice.

Clinical lectures are delivered daily at Cincinnati Hospital, in close proximity to the College.

Didactic lectures are delivered by a complete corps of Professors, who have ample resources in the Museums of the College for illustration of their lectures.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson.
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer.
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

JAMES TYSON, M.D. — LOUIS A. DUHRING, M.D.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

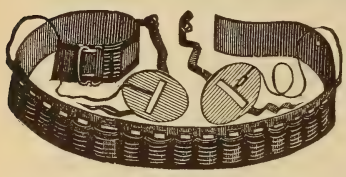
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Full descriptive Circulars of these articles will be furnished to the medical profession by enclosing stamp to

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

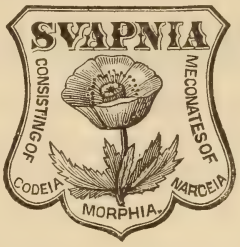
ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.



EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

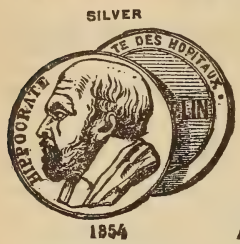
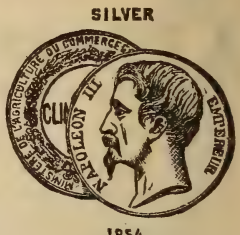
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.



Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT CLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1832

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

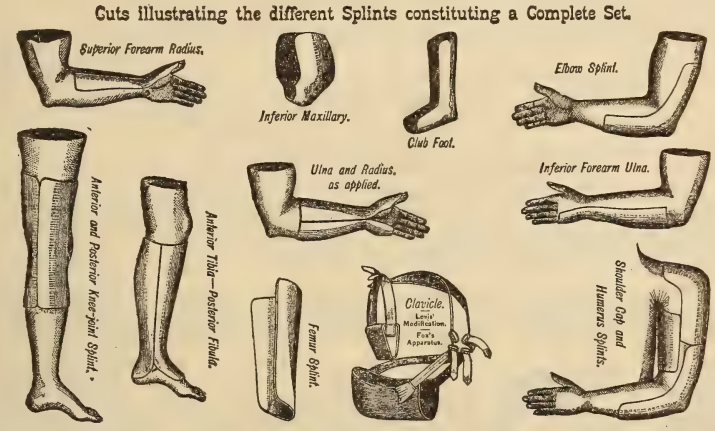
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B. ST. JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.

J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20 00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

DR. McINTOSH'S ELECTRIC OR CALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

1281-1332 192 AND 194 JACKSON STREET, CHICAGO, ILL.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk covering thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. This Battery is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

UNIVERSITY OF MARYLAND

SCHOOL OF MEDICINE.

SESSION OF 1882-83.

The Seventy-fifth Annual Session of the School of Medicine in the University of Maryland will begin on the

2d DAY OF OCTOBER, 1882,

And will terminate about the

15th DAY OF MARCH, 1883.

The course of Lectures introductory to the regular session will commence

SEPTEMBER 18th, 1882.

For further information apply to

L. McLANE TIFFANY, M.D., Dean,

31 CATHEDRAL ST., BALTIMORE

DENTAL DEPARTMENT.

In accordance with a modification of its Charter, granted by the last Legislature of Maryland. the University has established a Dental Department. which will be conducted by competent and experienced instructors. The new Dental Infirmary and Laboratory Building cannot be excelled in the completeness of its appointments, its adaptabi ity, and its situation.

For further information apply to

F. J. S. GORGAS, M.D., D.D.S.,

DEAN OF DENTAL DEPARTMENT,

1327-39 259 N. EUTAW ST., BALTIMORE.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

* WORKING BULLETIN.—A pamphlet containing the botanical description of *each plant*, with chemical, microscopical, physiological, therapeutical investigations, etc., etc. Sent free, by mail, on application.

1297 1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill, and that Warner & Co.'s are superior to all others.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

The following selected Recipes are prepared for Physicians' Prescriptions, and furnished by all druggists.

PIL. PHOSPHORI COMP. (Warner & Co.)

℞. Phosphori, - 1-100 gr.
Ext. Nuc. Vom., - ¼ gr

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

PIL IODOFORM ET FERRI. (Warner & Co.)

℞. Iodoform, - - 1 gr
Ferri Redacti, 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

PIL. DIGESTIVA. (Warner & Co.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill; may be taken one after dinner, or one before each meal, three times daily.

PIL. CALCIUM SULPHIDE. (Warner & Co.) 1-10, ¼, ½, & 1 gr. each

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

SAVORY & MOORE'S BEST FOOD FOR INFANTS

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, what ever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

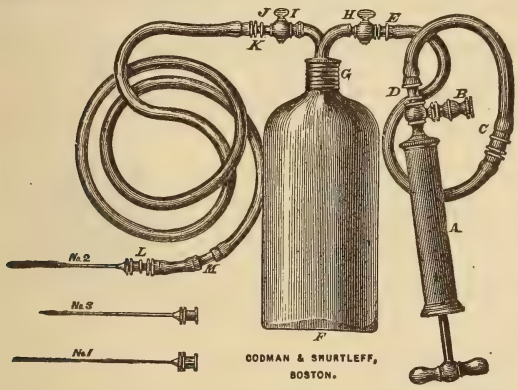

Fig. 77.

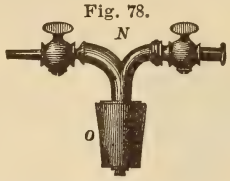
Fig. 68.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

ORIGINALITY AND RELIABILITY. QUALITY IS OF FIRST IMPORTANCE.
HIGHEST AWARDS, MEDALS AND DIPLOMAS, OVER ALL AMERICAN AND EUROPEAN COMPETITORS.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow

21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight nas been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1324-1348eow

It will make Blood faster than all preparations known.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1832

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

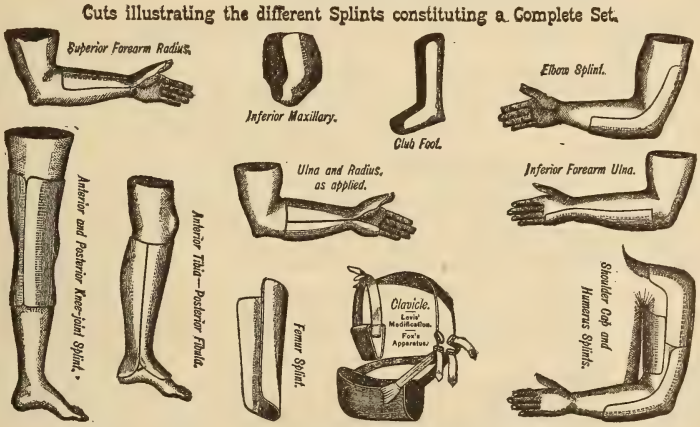
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.:

$1.00 each.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B. ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

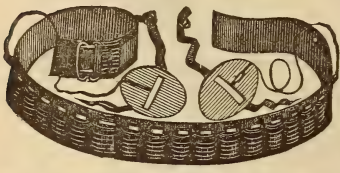
Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

SCHOOL OF MEDICINE.

SESSION OF 1882-83.

The Seventy-fifth Annual Session of the School of Medicine in the University of Maryland will begin on the

2d DAY OF OCTOBER, 1882,

And will terminate about the

15th DAY OF MARCH, 1883.

The course of Lectures introductory to the regular session will commence

SEPTEMBER 18th, 1882.

For further information apply to

L. McLANE TIFFANY, M.D., Dean,

31 CATHEDRAL ST., BALTIMORE

DENTAL DEPARTMENT.

In accordance with a modification of its Charter, granted by the last Legislature of Maryland, the University has established a Dental Department, which will be conducted by competent and experienced instructors. The new Dental Infirmary and Laboratory Building cannot be excelled in the completeness of its appointments, its adaptability, and its situation.

For further information apply to

F. J. S. GORGAS, M.D., D.D.S.,

DEAN OF DENTAL DEPARTMENT,

1327-39 259 N. EUTAW ST., BALTIMORE.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Prof. S. G. ARMOR, M.D., Dean.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive unction. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co.Philadelphia.U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 211 S. Front Street, Philadelphia.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

WYETH'S DIALYSED IRON.

A pure neutral solution of peroxide of iron in the colloid form; each fluid oz. contains 27.68 grs.

ADVANTAGES OF WYETH'S IRON.

"It is in itself easily digested, and its administration in all those cases where Iron is indicated, such as General Debility, Chlorosis, Hysteria, Anæmia, accompanied by Fluor Albus or Seminal Weakness, and Tardy Convalescence, Neuralgia, etc., has been followed by the best results."—Professor HAGAR.

The Lancet: "Wyeth's Preparation is excellent."

MR. THOS. BRYANT, F.R.C.S., *Senior Surgeon of Guy's Hospital, writes:* "I consider it the best and always prescribe it."

"It has no disagreeable taste or smell, and does not injure nor cause any discoloration of the teeth."—JAMES EDMUNDS, M.D., M.R.C.P.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH.

FIVE GRAINS IN EACH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc. Especially Convenient for Singers and Public Speakers.

A Single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

MORRELL MACKENZIE, M.D., London, *Senior Physician to the Hospital for Diseases of the Throat, late Physician to the London Hospital, writes:* "I have used Wyeth's Compressed Chlorate of Potash Tablets extensively during the last two years, and I consider that you have made a most valuable addition to pharmacology. The slow but uniform rate at which the Tablets dissolve renders their action peculiarly reliable, while their small size permits them to be kept in the mouth without inconvenience during speaking and even singing."

The London Medical Record says: "Wyeth's Compressed Tablets are preparations of remarkable merit. They are infinitely superior to the ordinary lozenge, being at once more compact, purer and more soluble."

"Of convenient size; they are beautifully made; and as they dissolve slowly in the mouth, are well suited for throat affections."—*The Lancet.*

"We especially recommend the Compressed Chlorate of Potash."—*British Medical Journal.*

Analytical Reports of Medical Press and Circular: "Chlorate of Potash is a remedy of acknowledged value in diphtheritic sore throat, and in inflammation of the mouth and throat induced by a depressed state of the system. It relieves hoarseness, and in many cases of fœtid breath it proves an efficient corrective. The Compressed Tablets contain exactly the theoretical amount, and are not made up with a vehicle."

Wyeth's Compressed Tablets.—Chlorate of Potash with Muriate of Ammonia.

3½ GRS. CHLORATE OF POTASH, 1½ GRS. MURIATE OF AMMONIA.

These Two Drugs are highly commended by the Profession for all forms of Sore Throat, accompanied by Ulcerations or Disordered Secretion of the Mucous Membrane.

The advantages of the combination of these two efficient remedial agents over either one administered alone will be readily appreciated by Physicians.

The Proportion of Muriate of Ammonia being less, and being intimately mixed with the less soluble salt of Chlorate of Potash, the objectionable taste of the former is not so apparent, while the medicinal effect is really just as potent.

DIRECTIONS.—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the mouth at the back of the tongue, but not at the tip, the surface of which is much more sensitive to taste and to the pungency of the ammonia salt. Children, half of one as often.

WYETH'S COMPRESSED TABLETS.—MURIATE OF AMMONIA.

THREE GRAINS EACH.

The solvent and discutient, as well as antiphlogistic powers of this salt are well known, and have led to its extensive employment, especially in Germany, in cases of Sore Throat, Bronchitis, etc., attended with abundant secretion of thick and tough mucus or phlegm.

Physicians will at once appreciate the great advantage to their patients of the local effects of this Salt slowly dissolving and coming in direct contact with the inflamed surface. It at once mitigates the cough or irritation, and lessens expectoration. Two or three of the Tablets will sometimes entirely relieve coughs that have long resisted treatment with the ordinary remedies.

DIRECTIONS.—A Tablet should be held and allowed to dissolve at the back part of the mouth, and repeated frequently when the irritation or tendency to cough is decided. In many cases half a Tablet is sufficient at one time.

WYETH'S COMPRESSED TABLETS.—CHLORATE OF POTASH AND BORAX
(OR VOICE TABLETS).

Two-and-one-half grains of each, free from any addition or excipient,

Quickly relieves hoarseness and clears the voice. Conveniently retained in the mouth while speaking or singing.

"Excellent and reliable specimens of a distinct improvement in pharmacy."—*British Medical Journal.*

We ask the attention of Physicians to the above excellent combination, which will be found highly efficient in the relief of inflammatory affections of the mouth and throat, and other morbid states of those parts, attended with disordered secretions. The depurative effects of these remedies are well known to the Profession.

As the taste is not disagreeable, we have prepared them in the form of Compressed Tablets, thus giving the patient the full benefit of their action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent their effects, but which sometimes themselves offend the stomach.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as while the solution is but temporary, the Tablet really acts as a continuous gargle.

Children take the Tablets regularly, as they have no unpleasant taste; while the convenience of carrying them in the pocket commends them to travelers.

For Singers and Public Speakers suffering from Hoarseness or Huskiness, a single Tablet placed in the mouth a few minutes before using the Voice will usually give entire relief.

DIRECTIONS.—One of the Tablets placed in the mouth every hour or two, and allowed to dissolve, will quickly relieve sore mouth, inflamed tongue, and congestion of the throat.

For offensive breath, they will prove equally efficient as our Chlorate of Potash Tablets, the addition of a mild alkali, like Borax, increasing the activity of the Chlorate of Potash.

WYETH'S COMPRESSED TABLETS.—BI-CARBONATE OF SODA.

FIVE GRAINS IN EACH.

Useful in all cases where an Antacid is indicated.

The value of alkalies, and especially of the Bi-Carbonates of Potash and Soda, is very fully understood by medical men, and to a great extent also by the public. In a very large class of cases, Indigestion, Flatulency, Heartburn and Colic are due to an excess of acid in the stomach; and this condition usually constitutes an important element in Gout, Rheumatism or Gravel

DOSE.—As an antacid, one every two or three hours till relieved. For Gout, Rheumatism or Gravel, one or two thrice daily. To be swallowed with water.

WYETH'S COMPRESSED SODA-MINT, OR NEUTRALIZING TABLETS.

Each Small Tablet contains:—Soda Bi-Carb., 4 grains; Ammon. Carb., ¼ grain; Ol. Menth. Pip., ⅒ gtt.

It is well known that the most frequent cause of discomfort in the stomach is the presence of an excess of acid.

Probably the most popular prescription with practitioners for cases arising from Acidity of the Stomach, such as Colic, Flatulence in Children, Heartburn, Sick Headache, Dyspepsia, etc., is a combination of Sodæ Bi-Carb. and Ammoniæ Carb., with some pleasing adjuvant in the form of a mixture.

The Soda-Mint or Neutralizing Tablet presents this favorite and very efficacious prescription in an exceedingly agreeable form, thereby greatly facilitating its administration, particularly to children.

Travelers and persons engaged in business will highly appreciate the convenience of having this valuable remedy prescribed in such a portable form.

DOSE.—From one to two Tablets, according to age. To be *swallowed* with water.

IT WILL GIVE US PLEASURE TO FURNISH, ON APPLICATION, SUFFICIENT OF THESE TABLETS TO TEST THEIR MERITS BY ACTUAL USE.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

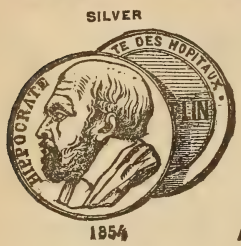
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,

SILVER

NEW HYPODERMIC SYRINGES.

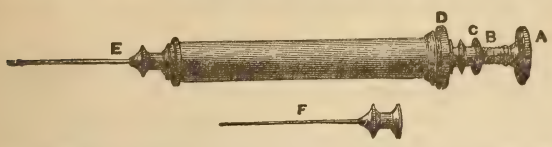

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

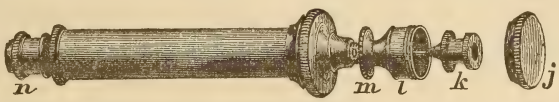
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

THREE VALUABLE MEDICAL WORKS.

NEW EDITIONS.

WOOD'S THERAPEUTICS.

A Treatise on Therapeutics, comprising Materia Medica and Toxicology, with Especial Reference to the Application of the Physiological Action of Drugs to Clinical Medicine. By H. C. WOOD, M.D., Professor of Materia Medica and Therapeutics, and Clinical Professor of Diseases of the Nervous System, in the University of Pennsylvania, etc. *Fourth Edition, Revised and Enlarged.* 8vo. Cloth, $6.00. Sheep, $6.50.

"Altogether this work stands by itself, as the only complete treatise on the physiological action of drugs in the English language, and no student of scientific therapeutics should be without it."—*London Practitioner.*

"It is unnecessary to say to any student of materia medica that the work of Professor Wood is a standard, and that, as an exposition of physiological action of drugs and its application to clinical medicine, it is unsurpassed. The success of the work is well merited and reflects credit upon its studious and accomplished author."—*New York Medical Record.*

HYPODERMATIC MEDICATION.

The Treatment of Diseases by the Hypodermatic Method. By ROBERTS BARTHOLOW, M.A., M.D., LL.D., Professor of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia; Fellow of the College of Physicians of Philadelphia, etc. *Fourth Edition, Revised and Enlarged* 12mo. Extra cloth. $2.00.

"No one book in America at present published can take the place of this manual."—*Virginia Medical Monthly.*

"A valuable acquisition to medical literature, treating instructively of a method of medication of great and growing importance. Dr. Bartholow has culled all that is valuable, and presented it to his readers in a clear, concise, and agreeable manner."—*American Practitioner.*

DISEASES OF THE SKIN.

A Practical Treatise on Diseases of the Skin. By LOUIS A. DUHRING, M.D., author of "Atlas of Skin Diseases;" Professor of Skin Diseases in the Hospital of the University of Pennsylvania, etc. *Third Edition, Thoroughly Revised and Improved.* Illustrated. 8vo. Extra cloth. $6.00.

"It is the best work on the topic, in our opinion, in the language, and to the American physician deserves to supersede all others."—*Medical and Surgical Reporter.*

"A work which will at once take its place in English-speaking countries as a standard book. . . . We know of no work which the busy practitioner who has to treat this troublesome class of diseases can consult with more advantage, and we cordially recommend it."—*The British Medical Journal.*

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - $25.00

Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.*

It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

THE PATENT SEAMLESS SKIN-FITTING SHIRTS,

USED WITH DR. SAYRE'S PLASTER-OF-PARIS JACKET.

PRICES.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Prof. S. G. ARMOR, M.D., Dean.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

MEDICAL BOOKS BY MAIL OR EXPRESS.

FRANK RIVERS,

DEALER IN

MEDICAL, SURGICAL AND SCIENTIFIC BOOKS,

No. 204 North Fifth Street, St. Louis, Mo.,

Desires to call the attention of the public to his large and varied stock, including all works in the market on MEDICINE, SURGERY, CHEMISTRY, MICROSCOPY, etc.

All new books published in the United States and England are added to our stock as soon as issued.

A cordial invitation is extended to those interested in the specialty of our business, to visit our establishment whenever they have an opportunity of doing so.

We desire to call the attention of the Medical Profession to the following recent publications:

THE DISEASES OF WOMEN.
Including their Pathology, Causation, Symptoms, Diagnosis and Treatment. A Manual for Students and Practitioners. By Arthur W. Edis, M.D. In one handsome octavo volume of 576 pages, with 148 illustrations. Cloth, $3; leather, $4.

A MANUAL OF OBSTETRICS.
By A. F. A. King, M.D., Professor of Obstetrics and Diseases of Women and Children, in the Medical Department of the Columbian University, Washington, D. C. In one very handsome 12mo. volume of 322 pages, with 58 illustrations. Cloth, $2.

THE PHYSICIAN HIMSELF,
And What He Should Add to the Strictly Scientific. By D. W. Cathell, M.D. One volume, small octavo, cloth. Price, $1.25.

THE SCIENCE AND ART OF MIDWIFERY.
By William Thompson Lusk, M.D. Complete in one volume, 8vo, with 226 illustrations. Cloth, $5; sheep, $6.

CLINICAL LECTURES ON DISEASES OF THE NERVOUS SYSTEM.
By Thomas Buzzard, M.D. (London), Fellow of the Royal College of Physicians in London; Honorary Fellow of King's College, London; Physician to the National Hospital for the Paralyzed and Epileptic. Price, $5.

LONGLEY'S MEDICAL LEXICON.
An Entirely New Dictionary. Giving the Correct Definition and Pronunciation of all words and terms in general use in Medicine and Collateral Sciences, with Appendix containing much miscellaneous information. By Elias Longley. 24mo. Pocket size. 300 compactly printed pages. Price, cloth, $1; tuck and pocket, $1.25.

The "Modern Therapeutics" Series.

I. MODERN MEDICAL THERAPEUTICS.
A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of Eminent Cotemporary Physicians, American and foreign. By Geo. H. Napheys, A.M., M.D. Seventh Edition. One volume, 8vo., pp. 607. Price, cloth, $4; sheep, $5.

II. MODERN SURGICAL THERAPEUTICS.
A Compendium of Current Formulæ, Approved Dressings, and Specific Methods for the Treatment of Surgical Diseases and Injuries. By Geo. H. Napheys, A.M. M.D. Seventh edition (1881). One volume, 8vo. pp. 608. Price, cloth, $4; sheep, $5.

III. THERAPEUTICS OF GYNECOLOGY AND OBSTETRICS.
Edited by William B. Atkinson, M.D., etc. Second edition, greatly enlarged (1881). One volume, 8vo. Price, cloth, $4; sheep, $5.

THE EXPERIMENTAL METHOD IN MEDICAL SCIENCE.
Being the Cartwright Lectures for 1882. By John C. Dalton, M.D., Professor of Physiology in the College of Physicians and Surgeons, New York. 8vo. $1.25.

THE STUDENT'S MANUAL OF DISEASES OF THE SKIN.

Including the Signs and Symptoms of Pregnancy, Obstetric Operations, Diseases of the Puerperal State, etc. By Alfred Meadows, M.D. New American, with additions from the Fourth London Edition, with Appendix and 145 Illustrations. 500 pages, octavo. Cloth. Price $2.

Letters of inquiry should contain stamp for reply. Books carefully wrapped and delivered by mail or express to any part of the world. Our General Catalogue of Medical Books sent gratis on application. All publications will be sent carriage free, upon receipt of price, by

FRANK RIVERS,

Publisher, Bookseller, and Importer of Medical and Scientific Books, 204 N. FIFTH ST., ST. LOUIS, MO.

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ SPECIAL TO PHYSICIANS.—**ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :— I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Hops.
MALTINE with Alteratives.

MALTINE WINE with Pepsin and Pancreatine.
MALTO-YERBINE.
MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

S. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. P. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

182 FULTON STREET,
New York.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow

21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cacherias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

The Physician's Clinical Record and Case Book.

FOR 100 PATIENTS.

Neatly Bound in Cloth, with Pocket and Stencil Plate, Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms of preserving the records of cases. A brass Stencil Plate accompanies each book, for rapidly sketching an outline of the body, in which may be marked, by shading, the seat of effusions, etc., or the size and position of organs, tumors, etc.

Several pages of Prefatory matter are given, presenting in the most succinct form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients; 2. Symptoms of Poisoning, etc.; 3. The Urine in Disease. Ruled Temperature Charts are added.

D. G. BRINTON, 115 S. Seventh Street, Philadelphia.

Agent for McIntosh's Goods.

ESTABLISHED 1837.

HORATIO G. KERN,

MANUFACTURER OF

SURGICAL AND DENTAL INSTRUMENTS, TRUSSES, ETC.

UNRIVALED EXTRACTING FORCEPS.

21 North Sixth Street, Philadelphia.

The attention of the medical profession is called to an extensive assortment of fine French Bougies and Catheters, comprising every variety of form and size. Also superior Rubber Covered Trusses, of every variety. Hypodermic Syringes with Platinum Points, which will not corrode. Special pains taken to the procuring of all novelties. Catalogues furnished on application. 1334-84eow

Prize Medal awarded to HORATIO G. KERN, Centennial Exhibition, 1876

Agent for McIntosh's Goods.

The "virus" produced on this farm is from pure "Beaugency stock," of our own importation, and from animals of perfect health. A constant supervision of the animals and product is had by a member of the firm, and all virus sent out is guaranteed. A fresh supply being given in all cases of failure in *primary* operations.

Orders by mail or telegraph promptly filled at the following rates:—

Whole quills (each sufficient for two vaccinations), each,	.25
Five quills,	1.00
Ten large ivory points well charged on both sides,	1.50
Six large ivory points well charged on both sides,	1.00
Large ivory points, less than six, well charged on both sides, each,	.25
Lymph Tubes, large size, each,	2.00
Crusts, small size, $1.00; Large size,	2.00

1282-tf

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

1324-1348eow

It will make Blood faster than all preparations known.

THE BEST. ANGLO-SWISS MILK FOOD.

Used by more than 1500 Physicians in New York City alone

During the past year, with uniformly favorable results.

Prescribed by leading Practitioners of all Schools, and used in prominent Institutions throughout the Country.

CHEMICAL ANALYSIS AND OTHER RELIABLE TESTIMONY

Moisture	5	to	6 per ct.	Carbo-hydrates, insoluble in water	15	to	16 per ct.
Nitrogenous matter (Nitrogen 2.25 to 2.35)	14.5	"	15 "	Fat	4	"	5 "
Carbo-hydrates, soluble in water	54	"	55 "	Ash (inclusive of 0.6 Phosphoric Acid)	2	"	2.5 "

"The proportion of nitrogenous matter or plastic aliments to carbo-hydrates or respiratory constituents in mother's milk is 1 : 4.5, and in this food the proportion is practically the same, namely, 1 : 5.7. The fat, as a respiratory substance, is here reduced to the equivalent of starch.

"My analysis perfectly agrees with the analysis given on their labels, and bears witness to the excellent and rational manner in which this food is compounded." DR. E. GEISSLER, Dresden, April 10th, 1880.

"I have used Anglo-Swiss Milk Food in my practice, and commend it with confidence to those who may need it for Infants or Invalids. The introduction of the Anglo-Swiss Milk Food into America is a great blessing to sick children, weary mothers and almost discouraged physicians, for medicine will not take the place of food."—
E. A. Jennings, M.D., Provident Dispensary, 62 West 14th St., New York.

"Used in New York Infant Asylum.—*J. Lewis Smith*, M.D.

"Has yielded most favorable results."—*J. C. Guernsey*, M.D., *Philadelphia.*

"The Diarrhœa had been persistent for four months, in spite of the use of other foods. After using two days the evacuations became normal, and the puny child is now plump and healthy."—*Geo. M. Ockford*, M.D., *Vincennes, Ind.*

"Used in our Seaside Nursery. It nourishes and strengthens every child to whom it is given."—*John W. Kramer*, M.D., *Master of St. John's Guild.*

"Our little ones love it. It regulates and strengthens the bowels."—*Sisters of Charity, St. Vincent's Home, Philadelphia.*

"We find that it agrees with each case."—*M. Spencer, Matron, Philadelphia Infants' Home.*

THE MODERN THERAPEUTIC SERIES.

I MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions from the practice of eminent contemporary physicians, American and foreign. By Geo. H. NAPHEYS, A.M., M.D. *Seventh Edition.* One volume, 8vo. pp. 607. Price, cloth, $4.00 ; sheep, $5.00.

II MODERN SURGICAL THERAPEUTICS.

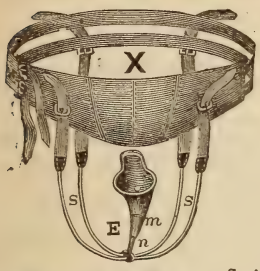
A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the Treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. *Seventh Edition* (1881). One volume, 8vo, pp. 608. Price, cloth, $4.00 ; sheep, $5.00.

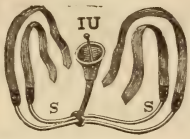
III THE THERAPEUTICS OF GYNECOLOGY and OBSTETRICS.

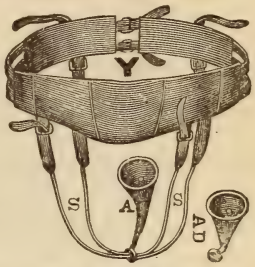
Edited by WILLIAM B. ATKINSON, M.D., etc. *Second Edition, Greatly Enlarged* (1881). One vol., 8vo. Price, cloth, $4.00 ; sheep, $5.00.

D. G BRINTON,
115 South Seventh St., Philadelphia.

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.





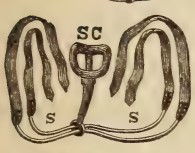


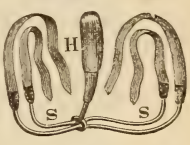
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7 00.

Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7.00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

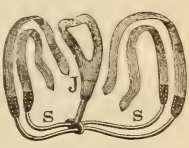
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.





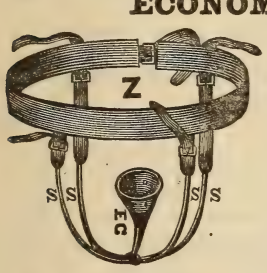
Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.



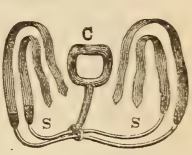
Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

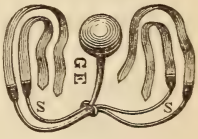
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y. $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

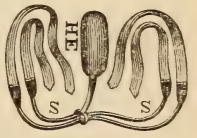


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

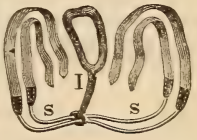


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2. and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR 'SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Established 1821.

UNIVERSITY OF MARYLAND

SCHOOL OF MEDICINE.

SESSION OF 1882-83.

The Seventy-fifth Annual Session of the School of Medicine in the University of Maryland will begin on the

2d DAY OF OCTOBER, 1882,

And will terminate about the

15th DAY OF MARCH, 1883.

The course of Lectures introductory to the regular session will commence

SEPTEMBER 18th, 1882.

For further information apply to

L. McLANE TIFFANY, M.D., Dean,

31 CATHEDRAL ST., BALTIMORE

DENTAL DEPARTMENT.

In accordance with a modification of its Charter, granted by the last Legislature of Maryland, the University has established a Dental Department, which will be conducted by competent and experienced instructors. The new Dental Infirmary and Laboratory Building cannot be excelled in the completeness of its appointments, its adaptability, and its situation.

For further information apply to

F. J. S. GORGAS, M.D., D.D.S.,

DEAN OF DENTAL DEPARTMENT,

1327-39 259 N. EUTAW ST., BALTIMORE.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

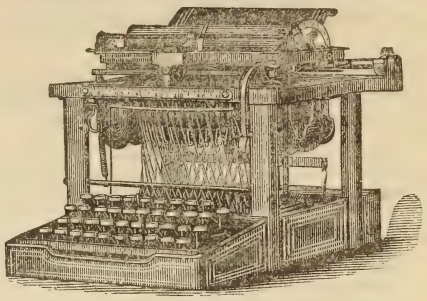
For circulars, address

Prof. S. G. ARMOR, M.D., Dean.

1326-1377

THE

PERFECTED TYPE-WRITER.



We desire to call your attention to our time and labor-saving instrument, the Type-writer. Its use is becoming universal. Nearly ten years' experience in the construction of writing machines has enabled us to approach perfection. One clerk with a Type-Writer can do the work of two good penmen. Time is money. The work is plain and beautiful, obviating all mistakes in reading. Several copies can be made at one writing Excellent press copies can be taken.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 50 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson.
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

MEDICAL BOOKS BY MAIL OR EXPRESS.

FRANK RIVERS,

DEALER IN

MEDICAL, SURGICAL AND SCIENTIFIC BOOKS,

No. 204 North Fifth Street, St. Louis, Mo.,

Desires to call the attention of the public to his large and varied stock, including all works in the market on MEDICINE, SURGERY, CHEMISTRY, MICROSCOPY, etc.

All new books published in the United States and England are added to our stock as soon as issued.

A cordial invitation is extended to those interested in the specialty of our business, to visit our establishment whenever they have an opportunity of doing so.

We desire to call the attention of the Medical Profession to the following recent publications:

THE DISEASES OF WOMEN.
Including their Pathology, Causation, Symptoms, Diagnosis and Treatment. A Manual for Students and Practitioners. By Arthur W. Edis, M.D. In one handsome octavo volume of 576 pages, with 148 illustrations. Cloth, $3; leather, $4.

A MANUAL OF OBSTETRICS.
By A. F. A. King, M.D., Professor of Obstetrics and Diseases of Women and Children, in the Medical Department of the Columbian University, Washington, D. C. In one very handsome 12mo. volume of 322 pages, with 58 illustrations. Cloth, $2.

THE PHYSICIAN HIMSELF,
And What He Should Add to the Strictly Scientific. By D. W. Cathell, M.D. One volume, small octavo, cloth. Price, $1.25.

THE SCIENCE AND ART OF MIDWIFERY.
By William Thompson Lusk, M.D. Complete in one volume, 8vo, with 226 illustrations. Cloth, $5; sheep, $6.

CLINICAL LECTURES ON DISEASES OF THE NERVOUS SYSTEM.
By Thomas Buzzard, M.D. (London), Fellow of the Royal College of Physicians in London; Honorary Fellow of King's College, London; Physician to the National Hospital for the Paralyzed and Epileptic. Price, $5.

LONGLEY'S MEDICAL LEXICON.
An Entirely New Dictionary. Giving the Correct Definition and Pronunciation of all words and terms in general use in Medicine and Collateral Sciences, with Appendix containing much miscellaneous information. By Elias Longley. 24mo. Pocket size. 300 compactly printed pages. Price, cloth, $1; tuck and pocket, $1.25.

The "Modern Therapeutics" Series.

I. MODERN MEDICAL THERAPEUTICS.
A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of Eminent Cotemporary Physicians, American and foreign. By Geo. H. Napheys, A.M., M.D. Seventh Edition. One volume, 8vo., pp. 607. Price, cloth, $4; sheep, $5.

II. MODERN SURGICAL THERAPEUTICS.
A Compendium of Current Formulæ, Approved Dressings, and Specific Methods for the Treatment of Surgical Diseases and Injuries. By Geo. H. Napheys, A.M. M.D. Seventh edition (1881). One volume, 8vo. pp. 608. Price, cloth, $4; sheep, $5.

III. THERAPEUTICS OF GYNECOLOGY AND OBSTETRICS.
Edited by William B. Atkinson, M.D., etc. Second edition, greatly enlarged (1881). One volume, 8vo. Price, cloth, $4; sheep, $5.

THE EXPERIMENTAL METHOD IN MEDICAL SCIENCE.
Being the Cartwright Lectures for 1882. By John C. Dalton, M.D., Professor of Physiology in the College of Physicians and Surgeons, New York. 8vo. $1.25.

THE STUDENT'S MANUAL OF DISEASES OF THE SKIN.
By L. D. Bulkley, M.D. Large 16mo. $1.25.

ECZEMA AND ITS MANAGEMENT.
A Practical Treatise. Based on the Analysis of Two Thousand Five Hundred Cases of the Disease. By L. D. Bulkley, M.D. Large 8vo. $3.

CHRONIC BRONCHITIS.
Its Forms and its Treatments. By J Milner Fothergill, M.D. Octavo, fully illustrated. $1.50

CLINICAL LECTURES ON DISEASES OF THE URINARY ORGANS.
Delivered at the University College Hospital. By Sir Henry Thompson. Sixth edition. Illustrated with 73 wood engravings. Price $1.25.

A MANUAL OF OBSTETRICS.
Including the Signs and Symptoms of Pregnancy, Obstetric Operations, Diseases of the Puerperal State, etc. By Alfred Meadows, M.D. New American, with additions from the Fourth London Edition, with Appendix and 145 Illustrations. 500 pages, octavo. Cloth. Price $2.

Letters of inquiry should contain stamp for reply. Books carefully wrapped and delivered by mail or express to any part of the world. Our General Catalogue of Medical Books sent gratis on application. All publications will be sent carriage free, upon receipt of price, by

FRANK RIVERS,

Publisher, Bookseller, and Importer of Medical and Scientific Books, 204 N. FIFTH ST., ST. LOUIS, MO.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

Registered Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574. Nos. 10 and 12 College Place, New York.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Full descriptive Circulars of these articles will be furnished to the medical profession by enclosing stamp to

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

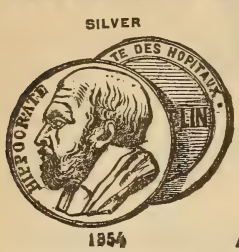
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS.

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

1263-1314

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Professor of Diseases of the Chest. President of the Faculty.

JOHN H. RIPLEY, M.D.,
Professor of the Diseases of Children. Visiting Surgeon to Charity Hospital, and Visiting Physician to St. Francis Hospital.

E. DARWIN HUDSON, M.D.,
Professor of General Medicine.

LOUIS ELSBERG, M.D.,
Professor of Laryngology and Rhinology. Professor of Laryngology at Dartmouth College. Visiting Physician to Charity Hospital (Throat Wards).

LANDON CARTER GRAY, M.D.,
Professor of Diseases of the Mind and Nervous System, and Electro-Therapy. Lecturer on Diseases of the Nervous System at Long Island College Hospital.

RICHARD C. BRANDEIS, M.D.,
Professor of Laryngology, Rhinology and Otology. Assistant Surgeon to the New York Ophthalmic and Aural Institute.

ANDREW R. ROBINSON, M.D.,
Professor of Dermatology. Visiting Dermatologist to the Demilt Dispensary. Professor of Normal Histology in the Woman's Medical College.

EDWARD B BRONSON, M.D.
Professor of Dermatology. Clinical Professor of Diseases of the Skin in the Woman's Medical College, and Visiting Dermatologist to the Northern Dispensary.

GEORGE B. FOWLER, M.D.,
Adjunct Professor of Diseases of Children. Instructor in Urinary Analysis.

JOHN A. WYETH, M.D.,
Professor of General and Genito-Urinary Surgery. Visiting Surgeon to Mount Sinai Hospital.

A. G. GERSTER, M.D.,
Professor of General and Genito-Urinary Surgery. Visiting Surgeon to German Hospital and Mount Sinai Hospital.

PAUL F. MUNDE, M.D.,
Professor of Gynecology and Obstetrics. Gynecologist to Mount Sinai Hospital (Out-Door Department), Visiting Physician to the Maternity Hospital. Professor of Gynecology at Dartmouth College

W. GILL WYLIE, M.D.,
Professor of Gynecology and Obstetrics. Visiting Gynecologist to Bellevue Hospital. Surgeon to St. Elizabeth Hospital.

EMIL GRUENING, M.D.,
Professor of Ophthalmology. Visiting Ophthalmologist to the German Hospital. Surgeon to the New York Eye and Ear Infirmary.

DAVID WEBSTER, M.D.,
Professor of Ophthalmology. Assistant Surgeon to the Manhattan Eye and Ear Hospital.

V. P. GIBNEY, M.D.,
Professor of Orthopedic Surgery. Assistant Surgeon to the Hospital for the Ruptured and Crippled.

CHARLES F. STILLMAN, M.D.,
Adjunct Professor of Orthopedic Surgery.

THE NEW YORK POLYCLINIC has been organized with the special view of teaching Clinical Medicine and Surgery. *Didactic Lectures will form no part of the plan of Instruction at this Institution.*

By reason of the large number of teachers, and the abundant clinical material, the Faculty will be enabled to divide the class into sections, of a limited number, so that the students will be brought into intimate personal contact with the patients, where the clinical features of each case may be minutely and leisurely examined, and thoroughly understood.

A portion of the College Building is occupied by the FREE DISPENSARY, under the management of the Faculty, for the gratuitous treatment of the poor, and in addition to the large number of patients treated here, the matriculants of the POLYCLINIC will receive bedside and operating-room instruction in the various Hospitals and Eleemosynary Institutions of this City, with one or more of which every member of the Faculty is connected.

In the departments of Ophthalmology, Gynecology, and Laryngology and Otology, where operative procedures can be satisfactorily witnessed by only a very limited number, there will be a further sub-division of the sections, so that each student may be able to observe every detail of the operation without interruption.

The Faculty believe that the tendency of Medical Education during the last few years has been markedly towards *Clinical Instruction.* It is now considered almost essential that every graduate should have the personal experience of a Hospital or Dispensary service, and that practitioners of fair experience, yet removed from the great centres where Medical Science is naturally more progressive, should at intervals avail themselves of the advantages which the city clinics offer for a more thorough training in general or special medicine.

To meet the wants of this large and intelligent class of physicians, and to afford to recent graduates, who have neither time nor opportunity to enter the Resident Hospital service, the NEW YORK POLYCLINIC has been inaugurated.

There will be five sessions of six weeks each, commencing on Tuesday, November 7th. *Thirty-six Clinical Lessons will be given on each subject during each session.*

Students will be admitted on any date, and each ticket will be good for six consecutive weeks. This will enable those whose time is limited to take advantage of the POLYCLINIC when most convenient to themselves.

The *Clinic* will be open from 11 to 12 A.M., and from 1 to 5 P.M. daily (Sundays excepted), and both Lecture Rooms of the College will be occupied at the same hour by different sections of the class.

The following is the list of charges for tickets to the various departments:—

Diseases of the Chest,	$15.00	General and Operative Surgery,	$25.00
" of Children,	15.00	Diseases of Women,	25.00
General Medicine,	15.00	" of the Eye,	20.00
Diseases of the Nervous System,	15.00	Orthopedic Surgery,	15.00
" " Throat, Nose and Ear,	15.00	Diseases of the Skin,	15.00

There are no extra charges and no *private courses.* Students can select one or more Departments, as may be desired.

EDW. A. AYRES, M.D., *Ass't Sec'y.* 1339- JOHN A. WYETH, M.D., *Secretary* of the Faculty, 214 & 216 East 34th Street, New York City.

THREE VALUABLE MEDICAL WORKS.

NEW EDITIONS.

WOOD'S THERAPEUTICS.

A Treatise on Therapeutics, comprising Materia Medica and Toxicology, with Especial Reference to the Application of the Physiological Action of Drugs to Clinical Medicine. By H. C. WOOD, M.D., Professor of Materia Medica and Therapeutics, and Clinical Professor of Diseases of the Nervous System, in the University of Pennsylvania, etc. *Fourth Edition, Revised and Enlarged.* 8vo. Cloth, $6.00. Sheep, $6.50.

"Altogether this work stands by itself, as the only complete treatise on the physiological action of drugs in the English language, and no student of scientific therapeutics should be without it."—*London Practitioner.*

"It is unnecessary to say to any student of materia medica that the work of Professor Wood is a standard, and that, as an exposition of physiological action of drugs and its application to clinical medicine, it is unsurpassed. The success of the work is well merited and reflects credit upon its studious and accomplished author."—*New York Medical Record.*

HYPODERMATIC MEDICATION.

The Treatment of Diseases by the Hypodermatic Method. By ROBERTS BARTHOLOW, M.A., M.D., LL.D., Professor of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia; Fellow of the College of Physicians of Philadelphia, etc. *Fourth Edition, Revised and Enlarged* 12mo. Extra cloth. $2.00.

"No one book in America at present published can take the place of this manual."—*Virginia Medical Monthly.*

"A valuable acquisition to medical literature, treating instructively of a method of medication of great and growing importance. Dr. Bartholow has culled all that is valuable, and presented it to his readers in a clear, concise, and agreeable manner."—*American Practitioner.*

DISEASES OF THE SKIN.

A Practical Treatise on Diseases of the Skin. By LOUIS A. DUHRING, M.D., author of "Atlas of Skin Diseases;" Professor of Skin Diseases in the Hospital of the University of Pennsylvania, etc. *Third Edition, Thoroughly Revised and Improved.* Illustrated. 8vo. Extra cloth. $6.00.

"It is the best work on the topic, in our opinion, in the language, and to the American physician deserves to supersede all others."—*Medical and Surgical Reporter.*

"A work which will at once take its place in English-speaking countries as a standard book. . . . We know of no work which the busy practitioner who has to treat this troublesome class of diseases can consult with more advantage, and we cordially recommend it."—*The British Medical Journal.*

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B. ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.

WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION**, Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

UNIVERSITY OF MARYLAND

SCHOOL OF MEDICINE.

SESSION OF 1882-83.

The Seventy-fifth Annual Session of the School of Medicine in the University of Maryland will begin on the

2d DAY OF OCTOBER, 1882,

And will terminate about the

15th DAY OF MARCH, 1883.

The course of Lectures introductory to the regular session will commence

SEPTEMBER 18th, 1882.

For further information apply to

L. McLANE TIFFANY, M.D., Dean,
31 CATHEDRAL ST., BALTIMORE

DENTAL DEPARTMENT.

In accordance with a modification of its Charter, granted by the last Legislature of Maryland, the University has established a Dental Department, which will be conducted by competent and experienced instructors. The new Dental Infirmary and Laboratory Building cannot be excelled in the completeness of its appointments, its adaptability, and its situation.

For further information apply to

F. J. S. GORGAS, M.D., D.D.S.,
DEAN OF DENTAL DEPARTMENT,
1327-39 259 N. EUTAW ST., BALTIMORE.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

MEDICAL DEPARTMENT. SESSION OF 1882-83.

Next term will commence on October 11th and close on March 7th, 1883. The new, elegant building, which in completeness is not surpassed by any medical college in the West, will be ready for use next session. There are two plans for instruction: Three term graded. Two course non-graded. No preliminary term. No holiday vacation. The daily work consists of six lectures, including Clinics at Mercy Hospital, Clinical Practice, Operations upon the Cadaver, and dissecting material without extra charge. Expense per term: Lectures, $20; Matriculation, $5; Demonstrator's ticket, $10; Final Examination Fee, $25.

For additional information, address

W. F. PECK, *Dean*, Davenport, Iowa.
1321-38 O T. GILLETT, *Sec'y*, Iowa City, Iowa.

Registered Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E F Houghton & Co. Philadelphia U S A

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

1297-1348 211 S. Front Street, Philadelphia.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, what ever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleer the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

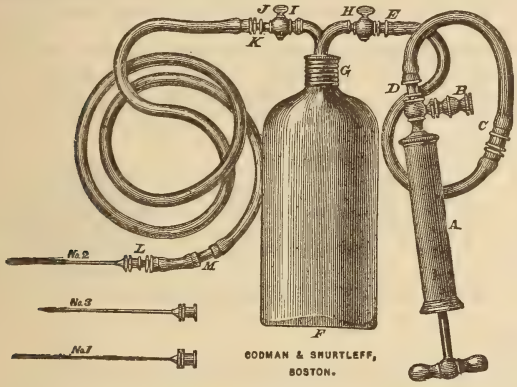

Fig. 77.

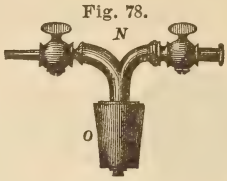
Fig. 68.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

BELLEVUE HOSPITAL MEDICAL COLLEGE,
NEW YORK, September 7, 1878.

MESSRS. SEABURY & JOHNSON:—

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

MESSRS. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cacherias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

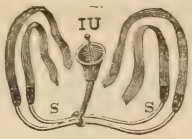
CARL L. JENSEN, M.D., PH.G.,

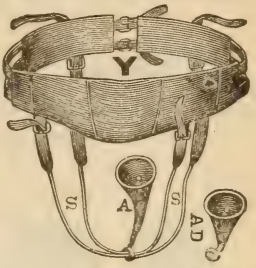
865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

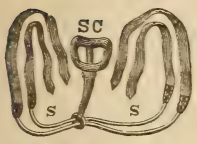
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.





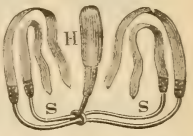
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7.00; on Z, $6.00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

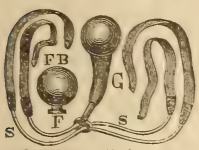


Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

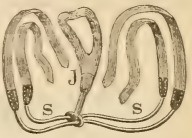
Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.



Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

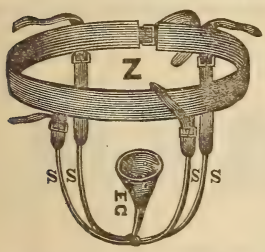


Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.



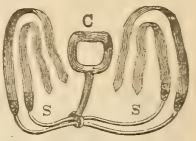
Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

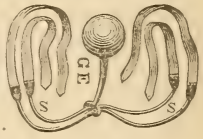
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5.50. Retroversion E, on Economy stem and belt Z, $6.00; X, or Y, $7.00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

Belts.—X, and Y have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

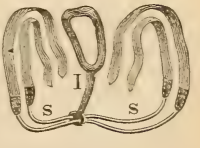




Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1 50 each.

Selection.—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2. and procidentia, 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time, only needed repair and difference of higher price instruments charged when required for complicated cases.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

It will make Blood faster than all preparations known.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson.
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer.
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition,* and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones,* which act as Digestors, a rich quantity of *Phosphates,* which are valuable Nutrients, and a medium proportion of *Hops,* serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

SAMUEL R. PERCY, M.D., *Professor of Materia Medica, New York Medical College.*

F. LE ROY SATTERLEE, M.D., Ph.D., *Professor of Chemistry, Materia Medica and Therapeutics in N. Y. College of Dent.; Professor of Chemistry and Hygiene, Am. Vet. College, etc.*

JAS. AITKIN MEIGS, M.D., Philadelphia, Pa., *Professor of the Institutes of Medicine and Medical Jurisprudence, Jefferson Medical College; Physician to Pennsylvania Hospital.*

W. W. DAWSON, M.D., Cincinnati, Ohio, *Professor of Principles and Practice of Surgery, Medical College of Ohio; Surgeon to Good Samaritan Hospital.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574. Nos. 10 and 12 College Place, New York.

QUINQUINIA.

Manufactured by THE CHARLES T. WHITE CO., New York.

The Alkaloids of Cinchona Bark before Isolation—Fifteen per cent. of Quinia; fifteen per cent. Quinidia; fifteen per cent. Cinchonidia; twenty-five per cent. Cinchonia; and thirty per cent. of Chinoidine (purified Alkaloid.)

ELIXIR QUINQUINIA,

(One Grain in each Fluid Drachm.)

COMPRESSED TABLETS OF QUINQUINIA,

(In Two and Five Grain Tablets.)

ELIXIR QUINQUINIA, IRON AND STRYCHNIA,

(One Grain Quinquinia, Two Grains Iron, One-sixtieth Grain Strychnia in each Drachm.)

Manufactured by JOHN WYETH & BROTHER, Philadelphia.

We ask the attention of physicians to this natural combination of the alkaloids of Cinchona Bark, having satisfied ourselves that it actually possesses the properties and advantages claimed by Charles T. White & Co., the Chemists who manufacture it and brought it to the notice of medical men. It has been long used in hospital, dispensary and private practice, with uniformly good results, the pamphlet they issue giving many testimonials to that effect, from leading physicians in the United States. The experience of these physicians, whose published statements in regard to its antiperiodic and tonic effects are so satisfactory, is daily confirmed by letters received from others, who have tested it more recently. In addition to the data given by them, we have received from our representatives, who come into personal contact with so many doctors all over the United States, most convincing proofs of the admirable therapeutic results arising from its administration, the claim being urged positively that, grain for grain, it is as efficient as Sulphate of Quinine, with the advantages of not being nearly so apt to induce cerebral excitement, and of proving more lasting in its antiperiodic influence, a superiority always claimed for the mixed alkaloids and the bark over the single salt, and, we believe, deservedly. So confident are we of the great value of Quinquinia as manufactured by this firm, that we have secured their entire product, believing that as soon as its merits are generally known it will be preferred in a large majority of cases to Sulphate of Quinine or Cinchonidia, being at least their equal in therapeutic value, with the important advantage, that we shall be able to supply it at a much less cost. Implicit reliance can be placed on its always being furnished of exact strength and uniform quality by the chemists who prepare it, the entire line of chemicals they manufacture being unexcelled, rarely, indeed, equaled, by the products of any laboratory in the world. We shall be glad to send their pamphlet, giving full details of clinical reports, etc., etc., and sufficient of the Compressed Tablets of Quinquinia to test their merits by actual use, to any physician who may desire them. As we are unable to send the Elixir by mail, we will take pleasure in sending by express a sample of either, with printed matter, etc, to physicians who will pay charges.

JOHN WYETH & BRO.,

Manufacturing Chemists. **PHILADELPHIA.**

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

MITCHELL'S

SOLUBLE MEDICATED GELATIN PREPARATIONS

For the Treatment of Gonorrhœa, Gleet, Prostatorrhœa, etc., etc.

TO THE PROFESSION.

The manufacturer desires to call the attention of Venereal Specialists and Surgeons to his remedies for the treatment of the different forms of urethral disease. Believing that a LEGITIMATE and NON-SECRET class of preparations of this character would be acceptable to the medical profession at large, instead of the thousand and one PATENT and PROPRIETARY articles with which the country is flooded, he has devised these goods, and now solicits from his fellow members of the profession, both their sympathy and their support. The Soluble Medicated Gelatin Preparations are made for *physicians' use* and *prescriptions only*, and no other custom is either *sought for* or *desired*.

LONG SIZE.

SHORT SIZE.

URETHRAL BOUGIES.—Mitchell's Urethral Bougies were first presented to the profession about four years ago, as a new and convenient method of treatment. They are now recommended and in use by the most prominent specialists of this country and of Europe, while a large and constantly increasing sale, extending from New Zealand to Persia, is a sufficient proof that their value is both acknowledged and appreciated.

ADVANTAGES OF THE BOUGIE TREATMENT.

1. Local remedies, easily introduced, causing no pain or inconvenience.
2. They occupy but very little space, and can be carried in the pocket of the patient, thus avoiding the "tell-tale" appearance of bottles and syringes.
3. A thorough and prolonged action of the remedy is produced.
4. The formation of stricture is prevented, as the Bougie acts as a Tampon, separating the walls of the urethra and preventing adhesion.

Forty-five different medications are now made. Among the most prominent are :

REGULAR No. 1.
Short Only.
(For Sub-acute Gonorrhœa.)
IN EACH BOUGIE.

Sulphate Zinc.....1 gr.
Carbolic Acid.....¼ "
Ext Hydrastis.....1 "
Ext. Belladonna.....1 "
Ext. Gelsemium.....¼ "

REGULAR No. 2.
Long Only.
(For Gleet.)
IN EACH BOUGIE.

Sulphate Zinc.....½ gr.
Carbolic Acid.....¼ "
Ext. Hydrastis.....1 "
Ext. Belladonna.....1 "

REGULAR No. 3.
Long and Short.
(For Acute Gonorrhœa.)
IN EACH BOUGIE.

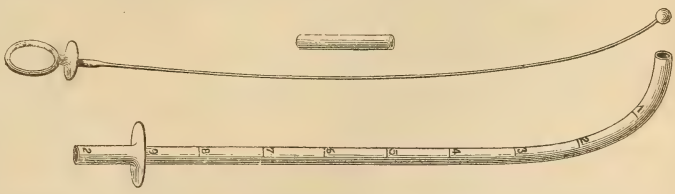
Oxide Zinc.....2 grs.
Ext. Gelsemium.....2 "
Sulph Morphia.....⅛ "
E. Aconite R. F.....1 "

Price per Box, to Physicians, $1.00.

Special rates for quantities.

PROSTATIC BOUGIES AND PROSTATIC BOUGIE CARRIER.

The MEDICATED PROSTATTIC BOUGIES are short cylindrical suppositories, ½ inch long, and ⅛ inch diameter. With the aid of the BOUGIE CARRIER, they can be placed directly in contact with any local disease in the urethra, and by the immediate and pre-arranged action which their solution must occasion are calculated to produce a most decided impression upon the affected part.



Twenty-nine medications are now made. Among the most prominent are :

(1) Sulphate Zinc, ½ gr.
(5) Tannic Acid.....1 "
Iodoform.....1 "
(18) Ext. Gels. Fl., 5 grs.
Ergotin.....1 gr.
Sulph. Morphia ¼ "
(25) Ergotin.....1 gr.
(26) Iodoform.....1 "
(28) Liq. Iodinii C.....1 "
(27) Iodoform.....1 gr.
Ext Belladon.....½ "
(29) Carbolic Acid.....½ "
Liq. Iodinii C.....1 "

PRICE—BOUGIES, per Box, 50cts., per dozen boxes, $5.00. CARRIERS, each, $2.00.

These goods can be obtained from the manufacturer,

CHARLES L. MITCHELL, M.D., Ninth & Race Sts., PHILADELPHIA.

Or from the following houses:

GILMAN BROTHERS, Boston; LAZELL, MARSH & GARDINER, New York: RICHARDSON & Co., St. Louis; E. H. SARGENT & Co., Chicago; B. BROEMMEL, Sixth and Mission Sts., San Francisco.

TO PHYSICIANS.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted,

R. OGDEN DOREMUS, M.D., L.L.D.,

Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIEDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D

Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,

J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

Samples and Circulars sent to Druggists or Physicians on application to

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,

NEW HYPODERMIC SYRINGES.

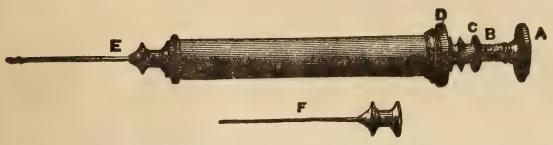

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

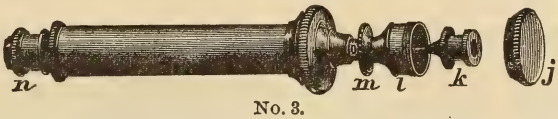
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case ..... *$3.50* Postage. .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS. E. FOUGERA & CO., 30 N. William St., N. Y.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE**, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

Ex-President Illinois State Medical Society.

BROMIDIA.

FORMULA.—Every *fluid drachm* contains fifteen grains EACH of pure Brom.-Potas. and *purified* Chloral, and one-eighth grain EACH of *gen. imp ext.* Cannabis-Ind. and Hyoscyam.

DOSE.—*One-half* to *one fluid drachm* in WATER or SYRUP, every hour until sleep is produced.

BROMIDIA is *the* Hypnotic *par excellence*. It produces refreshing sleep, and is *exceedingly* valuable in Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, etc., and will relieve *when opiates fail. Unlike* preparations of opium, *it does not lock up the secretions.* In the Restlessness and Delirium of Fevers *it is absolutely invaluable.*

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operat've Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20 00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

THE REPORTER FOR 1883.

We are prepared with a number of new and interesting features for the

MEDICAL AND SURGICAL REPORTER IN 1883.

Among these we may now announce a series of valuable **CLINICS**, carefully prepared, under the supervision of the gentlemen themselves, from

Prof. LOUIS A. SAYRE, New York City.
Prof. W. H. DRAPER, New York City.
Prof. A. C. POST, New York City.
Prof. J. M. DA COSTA, Philadelphia.
Prof. R. J. LEVIS, Philadelphia.
Prof. WM. GOODELL, Philadelphia.
Prof. D. HAYES AGNEW, Philadelphia.

And many other distinguished medical teachers.

A number of these have also agreed to send in **COMMUNICATIONS**, especially written for the REPORTER, on topics of interest to the general practitioner.

Regular **CORRESPONDENCE** from the principal European and American centres of medical study has been arranged for, and will prove an attractive feature during the year. It will be aimed especially to give early and accurate information of the novelties in medicine and surgery, and the news of the day of interest to the medical reader.

Our **REPORTS OF MEDICAL SOCIETIES** will in the future be yet more complete and prompt than in the past. Special representatives of the REPORTER will be present at all important meetings, and our facilities will in every respect equal those of any other journal published.

The feature of **SPECIAL REPORTS**, which has received much commendation from readers, will be paid increased attention, and those in 1883 will be found excellent summaries of all that the latest students have noted in their branches.

THE QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

Will hereafter take the place of the **Half-Yearly**. It will be furnished on the same terms as the Half-Yearly, although it will be larger, on better paper, and of more frequent issue.

It is the **ONLY** American Quarterly which takes cognizance and draws its material from **both Continents** and **all languages**. It is designed to be a **complete** representation of the progress of medical science every three months. No important fact will be omitted; no discovery overlooked. Especial and increased attention will hereafter be paid to **practical** medicine—to the great departments of

THERAPEUTICS AND MATERIA MEDICA,
DIAGNOSIS AND CLINICAL MEDICINE,
OPERATIVE SURGERY AND GYNECOLOGY.

TERMS: (in advance.)

The Medical and Surgical Reporter (weekly), one year,	**$5.00**
The Quarterly Compendium of Medical Science, one year,	**2.50**
The REPORTER and COMPENDIUM, taken together,	**6.00**

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E F Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

COCA.

(Erythroxylon Coca.)

The properties of this drug have long been familiar to the natives of Bolivia and Peru, to which countries it is indigenous. It is a powerful nervous stimulant, and increases the power of the muscular system to sustain fatigue. It has also a pleasant, general, excitant influence, removing fatigue and languor. Its effect on the brain is to stimulate that organ to greater activity, and to relieve the mind of the depression incident to worry and anxiety.

Considerable interest has been excited in this new remedy by the report of Prof. E. R. Palmer, M.D., of the University of Louisville, on its efficacy in the

Treatment of the Opium Habit.

Prof. Palmer found it of very extraordinary benefit in relieving the bodily and mental misery which follows the withdrawal of opium in the case of those addicted to its use—a misery which drives them again to the drug for temporary relief, only again to be similarly tortured when it is again withheld.

In testing a remedy with such important ends in view, it is desirable to be assured of the genuineness of the drug employed.

It was with our preparation of coca that Prof. Palmer conducted the experiments which led him to make the favorable report on the use of the drug.

PARKE, DAVIS & CO., Manufacturing Chemists.
DETROIT, MICHIGAN.

RHAMNUS PURSHIANA.

(CASCARA SAGRADA.)

It is scarcely necessary at this day to call the attention of the medical profession to the singular cathartic properties of this drug. Any argument on this point would be nearly as superfluous as would be an argument on the anodyne properties of opium. Rhamnus purshiana has gone through an ordeal which nothing but its inherent worth could have qualified it to pass through; it has compelled an acknowledgment of its merit from those most bitterly prejudiced against it, and it stands now universally conceded to be the most reliable agent in the hands of the physician for the treatment of chronic constipation.

We desire, at this time, merely to call attention to the fact that there are spurious preparations of the drug in the market, and that it is to the use of these that any wrong estimate of its properties is due. Piqued at the success of our enterprise in securing control of the entire crop of the season of 1878, unscrupulous competitors sought to prejudice the profession by charging that Cascara Sagrada was a compound to which we had given a fictitious name, and they even succeeded in causing some reputable members of the medical profession to view our introduction of it in that light. Among the latter, Dr Gibbons, of the *Pacific Medical and Surgical Journal*, was prominent. This gentleman was, however, soon convinced of his error, and in a very honorable manner retracted his statements. Foiled in this attempt, the next plan these parties adopted, and are now pursuing, was to place on the market a preparation of a species of the rhamnus, claiming it to be the rhamnus purshiana. Taking advantage of the reputation which our preparation of the genuine drug had won, they, by offering theirs at a price at which it would be impossible to sell the true article, have succeeded in placing a considerable quantity of this spurious variety on the market. The consequence has been to create a wrong estimate of the value of rhamnus purshiana with those who have not tried samples of the true drug.

We are in a position, furthermore, to state that the variety sold to our competitors by California drug dealers is not the true drug. We secure our drug through no dealers, but have our agents who supervise the gathering and drying of the bark, and are thus able to assure physicians that in ordering our preparation they may rely on securing an article whose use will be followed by all the results which we claim for it.

It, therefore, becomes absolutely necessary for us, in the interests both of the profession and of the drug, to place those who may prescribe Rhamnus Purshiana, on their guard against the trickery which is being practiced to injure the reputation of this unmistakably valuable agent.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow **21 PLATT STREET, NEW YORK.**

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

ELECTRO-MEDICAL MANUFACTURING CO.,

1281-m 38 Union Square, New York.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

ARE NOW READY.

MICROSCOPICAL MORPHOLOGY

OF THE

ANIMAL BODY IN HEALTH AND DISEASE.

BY

C. HEITZMANN, M.D.,

LATE LECTURER ON MORBID ANATOMY AT THE UNIVERSITY IN VIENNA, AUSTRIA.

In one handsome octavo volume of nearly 900 pages, illustrated by 380 original engravings made expressly for this work, from drawings by the author. Price, $7.00 cloth, and $8.00 half-bound.

This is an entirely new and original work, and brings Histology up to the latest date, and is the product of years of labor and research.

ON ELECTRO-DIAGNOSIS IN DISEASES OF THE NERVOUS SYSTEM. By DR. A. HUGHES BENNETT. Illustrated by 5 wood-cuts, and 5 plates. 8vo, cloth, $2.25.

ON THE MORBID CONDITION OF THE URINE DEPENDENT UPON Derangement of Digestion. By C. H. RALFE, M.D. 12mo, cloth, $2.25.

DONALDSON'S CONTRIBUTIONS TO PRACTICAL GYNÆCOLOGY. Illustrated with 16 wood engravings. By S. JAMES DONALDSON, M.D. Part I. Practical Observations on Gynæcology. Part II. Practical Observations on Dysmenorrhœa 8vo. Paper, $1 25. Cloth, $1.50.

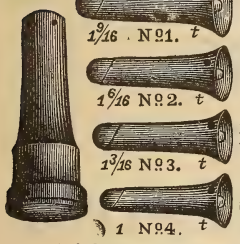
ANY OF THE ABOVE SENT BY MAIL, POSTPAID, ON RECEIPT OF PRICE.

A Catalogue of American and English Medical books furnished on application. 1t

STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



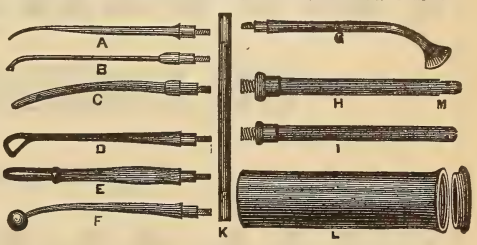
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

Established 1821.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,
BOSTON.

It will make Blood faster than all preparations known.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.

WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D ,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.

J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 3 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only beef digested and rendered assimilable by a *Pepsin*, always titrated and regular, extracted from the stomach of the sheep, digesting 700 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action. These preparations come under three forms:—

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER. This has only the taste of meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grains of Peptone, or 21 to 22 grains of Beef, entirely digested and assimilable.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE. This article is a liquid, neutral aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHAPOTEAUT'S PEPSICAL PEPTONE WINE. Each small wine-glass contains the Pepsical Peptone of 10 grains of Beef. It has a very agreeable taste and constitutes an excellent aliment, which the patient accepts with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses.

MIDY'S ESSENCE OF SANDAL.

The Essence of Sandal is used with success in the place of Copaiba and Cubebs. It is inoffensive, even when taken in large doses. Its use does not occasion any indigestion or diarrhœa. The Sandal Midy is chemically pure, and is only sold in the form of Capsules.

IODIZED SYRUP OF HORSE RADISH.

The Iodized Syrup of Horse Radish is used in France, on a large scale, as a substitute for Cod-liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine so intimately combined as to be insensible to the action of starch.

The above, and all the other preparations of Messrs. GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive unction. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257–1308, 1y.

A MANUAL OF OPHTHALMIC PRACTICE,

BY HENRY S. SCHELL, M. D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc.

With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on ophthalmic practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

EXTRACT FROM THE PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of Ophthalmology, and to describe those methods of treatment which he has become accustomed to rely upon from personal experience of their value.

CONTENTS.

CHAPTER I.—Anatomy and Physiology of the Eye. CHAPTER II.—Affections of the Eyelids. CHAPTER III.—Disorders of the Lachrymal Apparatus. CHAPTER IV.—Disorders of the Conjunctiva. CHAPTER V.—The Ophthalmoscope. CHAPTER VI.—Refraction and Accommodation and their Anomalies. CHAPTER VII.—Disorders of the Ocular Nerves and Muscles. CHAPTER VIII.—Diseases of the Cornea and Sclerotic. CHAPTER IX.—Diseases of the Iris, Choroid and Ciliary Body. CHAPTER X.—Diseases of the Crystalline Lens. CHAPTER XI.—Diseases of the Vitreous. CHAPTER XII.—Diseases of the Retina and Optic Nerve. CHAPTER XIII.—Disorders of the Eyeball. CHAPTER XIV.—Diseases of the Orbit.

D. G. BRINTON, 115 S. Seventh Street, Philadelphia.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,

JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

211 S. Front Street, Philadelphia.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

SAMUEL R. PERCY, M.D., *Professor of Materia Medica, New York Medical College.*

F. LE ROY SATTERLEE, M.D., Ph.D., *Professor of Chemistry, Materia Medica and Therapeutics in N. Y. College of Dent.; Professor of Chemistry and Hygiene, Am. Vet. College, etc.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574. Nos. 10 and 12 College Place, New York.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

MITCHELL'S

SOLUBLE MEDICATED GELATIN PREPARATIONS

For the Treatment of Gonorrhœa, Gleet, Prostatorrhœa, etc., etc.

TO THE PROFESSION.

The manufacturer desires to call the attention of Venereal Specialists and Surgeons to his remedies for the treatment of the different forms of urethral disease. Believing that a LEGITIMATE and NON-SECRET class of preparations of this character would be acceptable to the medical profession at large, instead of the thousand and one PATENT and PROPRIETARY articles with which the country is flooded, he has devised these goods, and now solicits from his fellow members of the profession both their sympathy and their support. The Soluble Medicated Gelatin Preparations are made for *physicians' use* and *prescriptions only*, and no other custom is either *sought for* or *desired.*

LONG SIZE.

SHORT SIZE.

URETHRAL BOUGIES.—Mitchell's Urethral Bougies were first presented to the profession about four years ago, as a new and convenient method of treatment. They are now recommended and in use by the most prominent specialists of this country and of Europe, while a large and constantly increasing sale, extending from New Zealand to Persia, is a sufficient proof that their value is both acknowledged and appreciated.

ADVANTAGES OF THE BOUGIE TREATMENT.

1. Local remedies, easily introduced, causing no pain or inconvenience.
2. They occupy but very little space, and can be carried in the pocket of the patient, thus avoiding the "tell-tale" appearance of bottles and syringes.
3. A thorough and prolonged action of the remedy is produced.
4. The formation of stricture is prevented, as the Bougie acts as a Tampon, separating the walls of the urethra and preventing adhesion.

Forty-five different medications are now made. Among the most prominent are :

REGULAR No. 1.
Short Only.
(For Sub-acute Gonorrhœa.)
IN EACH BOUGIE.

Sulphate Zinc	1 gr.
Carbolic Acid	¼ "
Ext. Hydrastis	1 "
Ext. Belladonna	1 "
Ext. Gelsemium	¼ "

REGULAR No. 2.
Long Only.
(For Gleet.)
IN EACH BOUGIE.

Sulphate Zinc	½ gr.
Carbolic Acid	¼ "
Ext. Hydrastis	1 "
Ext. Belladonna	1 "

REGULAR No. 3.
Long and Short.
(For Acute Gonorrhœa.)
IN EACH BOUGIE.

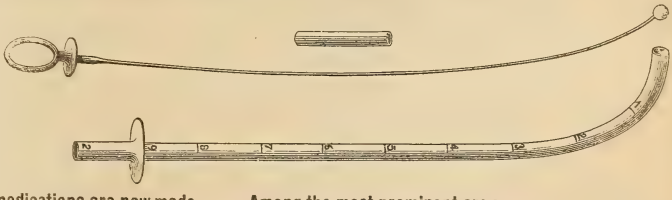
Oxide Zinc	2 grs.
Ext. Gelsemium	2 "
Sulph Morphia.	⅛ "
E. Aconite R. F.	1 "

Price per Box, to Physicians, $1.00.

Special rates for quantities.

PROSTATIC BOUGIES AND PROSTATIC BOUGIE CARRIER.

The MEDICATED PROSTATIC BOUGIES are short cylindrical suppositories, ½ inch long, and ⅓ inch diameter. With the aid of the BOUGIE CARRIER, they can be placed directly in contact with any local disease in the urethra, and by the immediate and pre-arranged action which their solution must occasion are calculated to produce a most decided impression upon the affected part.



Twenty-nine medications are now made. Among the most prominent are :

(1) Sulphate Zinc,	½ gr.	(18) Ext. Gels. Fl.,	5 grs.
(5) Tannic Acid	1 "	Ergotin	1 gr.
Iodoform	1 "	Sulph. Morphia	¼ "
(25) Ergotin	1 gr.	(27) Iodoform	1 gr.
(26) Iodoform	1 "	Ext Belladon	½ "
(28) Liq. Iodinii C.	1 "	(29) Carbolic Acid	½ "
		Liq. Iodinii C.	1 "

PRICE—BOUGIES, per Box, 50 cts., per dozen boxes, $5.00. CARRIERS, each, $2.00.

These goods can be obtained from the manufacturer,

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

Full Clinical Notes from the following and many other well-known physicians sent upon request.

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS. KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted, R. OGDEN DOREMUS, M.D., L.L.D.,

Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 23, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever. used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D

Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,

J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

BUFFALO LITHIA SPRINGS, VIRGINIA.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

DUCRO'S ALIMENTARY ELIXIR,

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

Prof. Materia Medica and Therapeutics, Long Island College Hospital.

J. M. BIGELOW, M.D., ALBANY, N. Y.
Prof. Materia Medica and Therapeutics, Albany Medical College.

J. L. WHITE, M.D., BLOOMINGTON, ILL.
Ex-President Illinois State Medical Society.

BROMIDIA.

FORMULA.—Every *fluid drachm* contains fifteen grains EACH of pure Brom.-Potas. and *purified* Chloral, and one-eighth grain EACH of *gen. imp ext.* Cannabis-Ind. and Hyoscyam.

DOSE.—*One-half* to *one fluid drachm* in WATER or SYRUP, every hour until sleep is produced.

BROMIDIA is *the* Hypnotic *par excellence*. It produces refreshing sleep, and is *exceedingly* valuable in Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, etc., and will relieve *when opiates fail. Unlike* preparations of opium, *it does not lock up the secretions.* In the Restlessness and Delirium of Fevers *it is absolutely invaluable.*

Grimault & Co.'s Pharmaceutical Products.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 8 Rue Vivienne, Paris.

The attention of the Medical Profession is directed to a few leading products:

Dusart's Syrup and Wine of Lacto-Phosphate of Lime,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as a general excitant of all the nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament, specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free to any physician, on application to Messrs. E. Fougera & Co.

GRIMAULT & CO.'S MATICO CAPSULES.

These Capsules are coated with Gluten, and contain the essential Oil of Matico, combined with the Balsam of Copaiba solidified by Calcined Magnesia. Besides its very special activity, the Essence of Matico has the property of disinfecting the Balsam of Copaiba, and of making it endured by the stomach, and does not cause any unpleasant eructations.

LEBAIGUE'S DIALYSED IRON, or pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless; does not blacken the teeth; is very readily absorbed; will not constipate, or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of Iron. It is offered in the form of a *Solution*, which is generally preferred; or of an *Elixir*, when a slight stimulant is desired.

The above and all the other preparations of Messrs GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO., Importing Pharmacists, New York

1342-67

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. De Jongh's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL

Is sold ONLY in Capsuled Imperial Half-Pints. $1.00, by most Druggists throughout the United States.

SOLE CONSIGNEES, ANSAR, HARFORD & CO., 77 STRAND, LONDON.

ANNOUNCEMENT OF THE

NEW YORK POST-GRADUATE MEDICAL SCHOOL,

SESSION OF 1882–1883.

FACULTY:

JAMES L. LITTLE, M.D.,
Professor of Clinical and Operative Surgery.
WILLIAM A. HAMMOND, M.D.,
Professor of the Diseases of the Mind and Nervous System, and of Medical Electricity.
D. B. ST JOHN ROOSA, M.D.,
Professor of Diseases of the Eye and Ear.
CLINTON WAGNER, M.D.,
Professor of Diseases of the Throat.
HENRY G. PIFFARD, M.D.,
Professor of Diseases of the Skin.
FREDERICK R. STURGIS, M.D.,
Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases.
MONTR SE A. PALLEN, M.D.,
Professor of Diseases of Women and of Operative Midwifery.
THOMAS E. SATTERTHWAITE, M.D.,
Professor of Histological and Pathological Anatomy.
MARY PUTNAM JACOBI, M.D.,
Professor of Diseases of Children.
EDWARD C. SPITZKA, M.D.,
Professor of Medical Jurisprudence and State Medicine.
WILLIAM G. MORTON, M.D.,
Associate Professor of Diseases of the Mind and Nervous System, and of Medical Electricity.
HERBERT G. LYTTLE, M.D.,
Associate Professor of Genito-Urinary Diseases and of Venereal Diseases.
WILLIAM H. PORTER, M.D.,
Associate Professor of Histological and Pathological Anatomy.
EDWARD T. ELY, M.D.,
Associate Professor of Diseases of the Eye and Ear.
WHITFIELD WARD, M.D.,
Associate Professor of Diseases of the Throat.
W. T. ALEXANDER, M.D.,
Associate Professor of Diseases of the Skin.
HENRY HUGHES, M.D.,
Associate Professor of Diseases of Women and of Operative Midwifery.
M. JOSIAH ROBERTS, M.D.,
Instructor in Orthopedic Surgery and Mechanical Therapeutics.
SENECA D. POWELL, M.D.,
Instructor in Clinical Surgery.
GRAEME M. HAMMOND, M.D.,
Instructor in Diseases of the Mind and Nervous System and of Medical Electricity.
JOHN H. NESBITT, M.D.,
Instructor in Clinical Surgery.
C. A. VAN RAMDOHR, M.D.,
Instructor in Gynecology and Operative Midwifery.
G. FAIRFAX WHITING, M.D.,
Instructor in Diseases of the Throat.
S. S. BURT, M.D.,
Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

Orders by mail filled the same day received, and sent by mail or express to any part of the country, on receipt of price or C. O. D. **Every Shirt Warranted to Fit.** A discount to physicians and orders in quantity. All P. O. Orders to be drawn on "Station A," New York City.

A. M. LAWSON,

Mention Medical and Surgical Reporter. 1310-1361 **689 BROADWAY, N. Y.**

THE REPORTER FOR 1883.

We are prepared with a number of new and interesting features for the

MEDICAL AND SURGICAL REPORTER IN 1883.

Among these we may now announce a series of valuable **CLINICS**, carefully prepared, under the supervision of the gentlemen themselves, from

Prof. LOUIS A. SAYRE, New York City.
Prof. W. H. DRAPER, New York City.
Prof. A. C. POST, New York City.
Prof. J. M. DA COSTA, Philadelphia.
Prof. R. J. LEVIS, Philadelphia.
Prof. WM. GOODELL, Philadelphia.
Prof. D. HAYES AGNEW, Philadelphia.

And many other distinguished medical teachers.

A number of these have also agreed to send in **COMMUNICATIONS**, especially written for the REPORTER, on topics of interest to the general practitioner.

Regular **CORRESPONDENCE** from the principal European and American centres of medical study has been arranged for, and will prove an attractive feature during the year. It will be aimed especially to give early and accurate information of the novelties in medicine and surgery, and the news of the day of interest to the medical reader.

Our **REPORTS OF MEDICAL SOCIETIES** will in the future be yet more complete and prompt than in the past. Special representatives of the REPORTER will be present at all important meetings, and our facilities will in every respect equal those of any other journal published.

The feature of **SPECIAL REPORTS**, which has received much commendation from readers, will be paid increased attention, and those in 1883 will be found excellent summaries of all that the latest students have noted in their branches.

THE QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

Will hereafter take the place of the **Half-Yearly.** It will be furnished on the same terms as the Half-Yearly, although it will be larger, on better paper, and of more frequent issue.

It is the **ONLY** American Quarterly which takes cognizance and draws its material from **both Continents and all languages.** It is designed to be a **complete** representation of the progress of medical science every three months. No important fact will be omitted; no discovery overlooked. Especial and increased attention will hereafter be paid to **practical** medicine—to the great departments of

THERAPEUTICS AND MATERIA MEDICA,
DIAGNOSIS AND CLINICAL MEDICINE,
OPERATIVE SURGERY AND GYNECOLOGY.

TERMS: (in advance.)

The Medical and Surgical Reporter (weekly), one year,	**$5.00**
The Quarterly Compendium of Medical Science, one year,	**2.50**
The REPORTER and COMPENDIUM, taken together,	**6.00**
The Reporter, Compendium and Physician's Pocket Record, taken together,	**7.00**

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

ELECTRICIAN'S REMOVAL.

I have removed my Electro-Magnetic Office to 1210 Filbert street, for the better accommodation of my customers, where I will keep on hand constantly a full assortment of new and second-hand Batteries. Will buy back, for cash, my own make of French and Giant Batteries.

1333-84 JAS. GLASS, M.D.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

182 FULTON STREET,
New York.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

New York: 60 Maiden Lane and 21 Liberty Street.

1297-1348

QUINQUINIA.

Manufactured by THE CHARLES T. WHITE CO., New York.

The Alkaloids of Cinchona Bark before Isolation—Fifteen per cent. of Quinia; fifteen per cent. Quinidia; fifteen per cent. Cinchonidia; twenty-five per cent. Cinchonia; and thirty per cent. of Chinoidine (purified Alkaloid.)

ELIXIR QUINQUINIA,

(One Grain in each Fluid Drachm.)

COMPRESSED TABLETS OF QUINQUINIA,

(In Two and Five Grain Tablets.)

ELIXIR QUINQUINIA, IRON AND STRYCHNIA,

(One Grain Quinquinia, Two Grains Iron, One-sixtieth Grain Strychnia in each Drachm.)

Manufactured by JOHN WYETH & BROTHER, Philadelphia.

We ask the attention of physicians to this natural combination of the alkaloids of Cinchona Bark, having satisfied ourselves that it actually possesses the properties and advantages claimed by Charles T. White & Co., the Chemists who manufacture it and brought it to the notice of medical men. It has been long used in hospital, dispensary and private practice, with uniformly good results, the pamphlet they issue giving many testimonials to that effect, from leading physicians in the United States. The experience of these physicians, whose published statements in regard to its antiperiodic and tonic effects are so satisfactory, is daily confirmed by letters received from others, who have tested it more recently. In addition to the data given by them, we have received from our representatives, who come into personal contact with so many doctors all over the United States, most convincing proofs of the admirable therapeutic results arising from its administration, the claim being urged positively that, grain for grain, it is as efficient as Sulphate of Quinine, with the advantages of not being nearly so apt to induce cerebral excitement, and of proving more lasting in its antiperiodic influence, a superiority always claimed for the mixed alkaloids and the bark over the single salt, and, we believe, deservedly. So confident are we of the great value of Quinquinia as manufactured by this firm, that we have secured their entire product, believing that as soon as its merits are generally known it will be preferred in a large majority of cases to Sulphate of Quinine or Cinchonidia, being at least their equal in therapeutic value, with the important advantage, that we shall be able to supply it at a much less cost. Implicit reliance can be placed on its always being furnished of exact strength and uniform quality by the chemists who prepare it, the entire line of chemicals they manufacture being unexcelled, rarely, indeed, equaled, by the products of any laboratory in the world. We shall be glad to send their pamphlet, giving full details of clinical reports, etc., etc., and sufficient of the Compressed Tablets of Quinquinia to test their merits by actual use, to any physician who may desire them. As we are unable to send the Elixir by mail, we will take pleasure in sending by express a sample of either, with printed matter, etc, to physicians who will pay charges.

JOHN WYETH & BRO.,

Manufacturing Chemists. **PHILADELPHIA.**

COCA.

(Erythroxylon Coca.)

THE properties of this drug have long been familiar to the natives of Bolivia and Peru, to which countries it is indigenous. It is a powerful nervous stimulant, and increases the power of the muscular system to sustain fatigue. It has also a pleasant, general, excitant influence, removing fatigue and languor. Its effect on the brain is to stimulate that organ to greater activity, and to relieve the mind of the depression incident to worry and anxiety.

Considerable interest has been excited in this new remedy by the report of Prof. E. R. Palmer, M.D., of the University of Louisville, on its efficacy in the

Treatment of the Opium Habit.

Prof. Palmer found it of very extraordinary benefit in relieving the bodily and mental misery which follows the withdrawal of opium in the case of those addicted to its use—a misery which drives them again to the drug for temporary relief, only again to be similarly tortured when it is again withheld.

In testing a remedy with such important ends in view, it is desirable to be assured of the genuineness of the drug employed.

It was with our preparation of coca that Prof. Palmer conducted the experiments which led him to make the favorable report on the use of the drug.

PARKE, DAVIS & CO., Manufacturing Chemists.
DETROIT, MICHIGAN.

RHAMNUS PURSHIANA.

(CASCARA SAGRADA.)

It is scarcely necessary at this day to call the attention of the medical profession to the singular cathartic properties of this drug. Any argument on this point would be nearly as superfluous as would be an argument on the anodyne properties of opium. Rhamnus purshiana has gone through an ordeal which nothing but its inherent worth could have qualified it to pass through; it has compelled an acknowledgment of its merit from those most bitterly prejudiced against it, and it stands now universally conceded to be the most reliable agent in the hands of the physician for the treatment of chronic constipation.

We desire, at this time, merely to call attention to the fact that there are spurious preparations of the drug in the market, and that it is to the use of these that any wrong estimate of its properties is due. Piqued at the success of our enterprise in securing control of the entire crop of the season of 1878, unscrupulous competitors sought to prejudice the profession by charging that Cascara Sagrada was a compound to which we had given a fictitious name, and they even succeeded in causing some reputable members of the medical profession to view our introduction of it in that light. Among the latter, Dr Gibbons, of the *Pacific Medical and Surgical Journal*, was prominent. This gentleman was, however, soon convinced of his error, and in a very honorable manner retracted his statements. Foiled in this attempt, the next plan these parties adopted, and are now pursuing, was to place on the market a preparation of a species of the rhamnus, claiming it to be the rhamnus purshiana. Taking advantage of the reputation which our preparation of the genuine drug had won, they, by offering theirs at a price at which it would be impossible to sell the true article, have succeeded in placing a considerable quantity of this spurious variety on the market. The consequence has been to create a wrong estimate of the value of rhamnus purshiana with those who have not tried samples of the true drug.

We are in a position, furthermore, to state that the variety sold to our competitors by California drug dealers is not the true drug. We secure our drug through no dealers, but have our agents who supervise the gathering and drying of the bark, and are thus able to assure physicians that in ordering our preparation they may rely on securing an article whose use will be followed by all the results which we claim for it.

It, therefore, becomes absolutely necessary for us, in the interests both of the profession and of the drug, to place those who may prescribe Rhamnus Purshiana, on their guard against the trickery which is being practiced to injure the reputation of this unmistakably valuable agent.

PARKE DAVIS & Co., Manufacturing Chemists,

1297-1348

DETROIT MICH.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.
The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE { Aloin, 1-5 gr. / Strychnine, 1-60 gr. } per 100, 60c.
A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, per 100, 60c.
The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. { Atropia 1-300 gr. / Morphia, 1-24 gr. } per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. { Atropia, 1-60 gr. / Morphia, 1-8 gr. } per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. { Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr. } per 100, 1.50.

McK. & R. DIURETIC. { Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr. } per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " " = 30 grs. " "), $1.60.
" " " 5 grs. (" " " = 50 grs. " "), 2.40.
We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)
WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. { Ergotin Purif., 1 gr. / Aloin, 1-2 gr. } per 100, $1.25.
The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. { Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr. } per 100, $1.25.
Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. per 100, 40c.
Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., per 100, 60c.
Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. { Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs. } per 100, 80c.

McK. & R. IODOFORM AND OPIUM, { Iodoformum, 1 gr. / Pulv. Opii, 1 gr. } per 100, $1.50.
Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) per 100, 50c.
{ Ext. Coloc. Comp pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr. }

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., per 100, 40c.
The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1 16, 1-10, 1-8, 1-6, and 1-4 gr.
We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, per 100, 60c.
Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., per 100, 60c.
A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr. } per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr. } per 100, $2.50.

Send for Seventh Edition of our Formula Book.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids, in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substance	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted,
R. OGDEN DOREMUS, M.D., L.L.D.,
Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We cousider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D
Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,
J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, what ever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

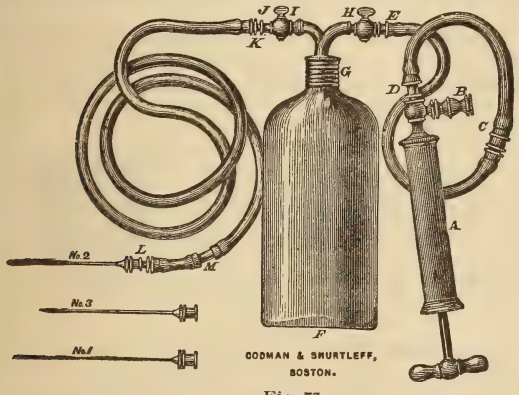

Fig. 68.

Fig. 77.

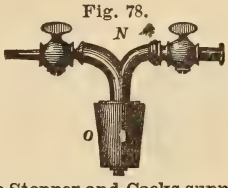

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing, as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold-plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions, $16.00. Postage 64 cents

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78), to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions, $14.00 Postage 32 cents.

No. 4. Stomach attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional, $6.00. Postage, 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of $3.40.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN.

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston, Philadelphia, or Pittsburg. *If any Physician has a chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz. 55 cents; 12 oz., $1.00.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 3 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only beef digested and rendered assimilable by a *Pepsin*, always titrated and regular, extracted from the stomach of the sheep, digesting 700 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action. These preparations come under three forms:—

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER. This has only the taste of meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grains of Peptone, or 21 to 22 grains of Beef, entirely digested and assimilable.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE. This article is a liquid, neutral aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHAPOTEAUT'S PEPSICAL PEPTONE WINE. Each small wine-glass contains the Pepsical Peptone of 10 grains of Beef. It has a very agreeable taste and constitutes an excellent aliment, which the patient accepts with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses.

MIDY'S ESSENCE OF SANDAL.

The Essence of Sandal is used with success in the place of Copaiba and Cubebs. It is inoffensive, even when taken in large doses. Its use does not occasion any indigestion or diarrhœa. The Sandal Midy is chemically pure, and is only sold in the form of Capsules.

IODIZED SYRUP OF HORSE RADISH.

The Iodized Syrup of Horse Radish is used in France, on a large scale, as a substitute for Cod-liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine, so intimately combined as to be insensible to the action of starch.

The above, and all the other preparations of Messrs. **GRIMAULT & CO.**, and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO. Importing Pharmacists, New York.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. De Jongh's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL

is sold ONLY in Capsuled Imperial Half-Pints. $1.00, by most Druggists throughout the United States.

SOLE CONSIGNEES, ANSAR, HARFORD & CO., 77 STRAND, LONDON.

Instructor in Diseases of the Eye and Ear.
J. HILGARD TYNDALE, M.D., Instructor in Physical Diagnosis and Diseases of the Chest.

The College Building, which is commodious and well adapted for its present purpose, is conveniently situated at Nos. 209 and 211 East Twenty-third St., between the stations of the Second and Third Avenue Elevated Railways, and on the line of a surface road. It is also centrally located, with reference to the Hospitals and Dispensaries with which the Faculty are connected, and from which they will obtain the material that is necessary to illustrate their lecture.

Instructions in the College Building will be conducted by the Professors of the several departments. It will comprise systematic courses of lectures, that will also be clinical, so far as practicable.

Hospital, Dispensary, and Laboratory instruction will be given by the Associate Professors and Instructors, who will give practical demonstration of the most approved methods in use, for the investigation and treatment of disease.

The Session of 1882–1883 will open on the first Monday in November next, and will close on the last Saturday of the following April. It will be subdivided into three terms of seven weeks each, and it is designed that the chief topics of importance in each branch shall be presented in a practical manner, especially adapted for the requirements of the general practitioner. The fee for any one course for a term of seven weeks is $20.00. In some of the departments special instruction will also be given at special rates. Certificates of attendance in any department will be given, on application, to any graduate who has complied with the regulations of the Faculty governing this matter. For further information address, 1332-44

FREDERICK R. STURGIS, M.D., Secretary of the Faculty, Nos. 209 and 211 East 23d St., New York City

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.*

It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition,* and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones,* which act as Digestors, a rich quantity of *Phosphates,* which are valuable Nutrients, and a medium proportion of *Hops,* serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

FEES.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

Dr. W. B. CARPENTER,	JEAN INGELOW,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

IN 1883 THE LIVING AGE enters upon the fortieth year of its publication. Originally commended by President Adams, Judge Story, Chancellor Kent, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has constantly received the support of the best men and journals of the country, and has met with uninterrupted success. A WEEKLY MAGAZINE of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Leading Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress.

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"LITTELL'S LIVING AGE has now for many years held the first place of all our serial publications. . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. . The volumes, as they successively appear, must be the despair of the critic. They are so uniformly excellent, and with excellence of such a high character, that they exhaust his terms of praise."—*The Churchman, New York.*

"There is no better medium of keeping one's self well informed in regard to the intellectual condition of the day."—*New York Observer.*

"The ablest essays and reviews of the day are to be found here."—*The Presbyterian, Philadelphia.*

"It stands easily at the head of its class and deserves its prosperity."—*The Congregationalist, Boston.*

"No other publication can supply its place. It furnishes indispensable reading. . It contains not only the best solid literature, but also the best serial stories of the day. . Its pages are sufficient to keep any reader abreast with the best printed thoughts of the best of our contemporary writers."—*Episcopal Register, Philadelphia.*

"Whatever else in current literature we may have, we cannot well afford to be without THE LIVING AGE."—*Lutheran Observer, Philadelphia.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Pittsburgh Christian Advocate.*

"In no other form with which we are acquainted is so much valuable and interesting reading for so small an outlay placed within the reach of the public. . The indispensable among magazines."—*Pacific Churchman, San Francisco.*

"It is for readers of limited leisure or purse the most convenient and available means of possessing themselves of the very best results of current criticism, philosophy, science and literature."—*Presbyterian Banner, Pittsburgh.*

"Its weekly deliverances have been hailed with delight for more than a generation."—*Christian Register, Boston.*

"As much a necessity as ever."—*The Advance, Chicago.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"It retains its traits of catholicity, breadth of scope, and discriminating selection, which have marked it from the beginning. . It is simply indispensable."—*Boston Journal.*

"No other periodical can compare with it in interest and value."—*Boston Traveller.*

"No reader who makes himself familiar with its contents can lack the means of a sound literary culture."—*New York Tribune.*

"As well conducted as ever."—*New York World.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies. . In it we find the best productions of the best writers upon all subjects ready to our hand."—*Philadelphia Inquirer.*

"Since its first appearance, nearly forty years ago, it has been far ahead of all competition in English-speaking lands."—*Philadelphia Evening News.*

"It is indispensable in every household where any attempt is made to keep up with the current thought of the day."—*Hartford Courant.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"As much in the forefront of eclectic publications as at its start forty years ago."—*Cincinnati Gazette.*

"It being a weekly publication, is, comparatively speaking, the cheapest magazine published."—*Commercial Advertiser, Detroit.*

"Grows better as the years roll on."—*Indianapolis Journal.*

"It is the most valuable acquisition that could be made to any magazine table."—*Leavenworth Times.*

"The oldest and best."—*Courier-Journal, Louisville.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases."—*North American, Philadelphia.*

"The great eclectic of the world."—*Morning Star, Wilmington, N.C.*

"Whatever may be the competition for public favor, it always holds its place. . The best of magazines to subscribe to."—*Montreal Gazette.*

Registered Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,

JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 211 S. Front Street, Philadelphia.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

SAMUEL R. PERCY, M.D., *Professor of Materia Medica, New York Medical College.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574. Nos. 10 and 12 College Place, New York.

MALTINE,

A CONCENTRATED EXTRACT OF

MALT WHEAT, OATS, AND BARLEY.

In its prep e temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive a ve agents unimpaired. Extracts of Malt are made from Barley alone, by the German proce directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, st wholly destroying the starch digestive principle, Diastase.

L OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Hops.
MALTINE with Alteratives.
MALTINE with Beef and Iron.
MALTINE with Cod Liver Oil.
MALTINE with Cod Liver Oil and Pancreatine.
MALTINE with Hypophosphites.
MALTINE with Phosphorus Comp.
MALTINE with Peptones.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates.
MALTINE with Phosphates Iron and Quinia.
MALTINE with Phosphates Iron, Quinia and Strychnia.
MALTINE Ferrated.
MALTINE WINE.
MALTINE WINE with Pepsin and Pancreatine.
MALTO-YERBINE.
MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

G. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

J. B. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

MITCHELL'S

SOLUBLE MEDICATED GELATIN PREPARATIONS

For the Treatment of Gonorrhœa, Gleet, Prostatorrhœa, etc., etc.

TO THE PROFESSION.

The manufacturer desires to call the attention of Venereal Specialists and Surgeons to his remedies for the treatment of the different forms of urethral disease. Believing that a LEGITIMATE and NON-SECRET class of preparations of this character would be acceptable to the medical profession at large, instead of the thousand and one PATENT and PROPRIETARY articles with which the country is flooded, he has devised these goods, and now solicits from his fellow members of the profession both their sympathy and their support. The Soluble Medicated Gelatin Preparations are made for *physicians' use* and *prescriptions only*, and no other custom is either *sought for* or *desired*.

LONG SIZE.

SHORT SIZE.

URETHRAL BOUGIES.—Mitchell's Urethral Bougies were first presented to the profession about four years ago, as a new and convenient method of treatment. They are now recommended and in use by the most prominent specialists of this country and of Europe, while a large and constantly increasing sale, extending from New Zealand to Persia, is a sufficient proof that their value is both acknowledged and appreciated.

ADVANTAGES OF THE BOUGIE TREATMENT.

1. Local remedies, easily introduced, causing no pain or inconvenience.
2. They occupy but very little space, and can be carried in the pocket of the patient, thus avoiding the "tell-tale" appearance of bottles and syringes
3. A thorough and prolonged action of the remedy is produced.
4. The formation of stricture is prevented, as the Bougie acts as a Tampon, separating the walls of the urethra and preventing adhesion.

Forty-five different medications are now made. Among the most prominent are :

REGULAR No. 1.
Short Only.
(For Sub-acute Gonorrhœa.)
IN EACH BOUGIE.
Sulphate Zinc.....1 gr.
Carbolic Acid.....¼ "
Ext. Hydrastis.....1 "
Ext. Belladonna.....1 "
Ext. Gelsemium..... ¼ "

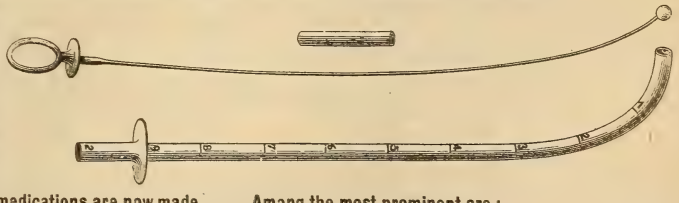
REGULAR No. 2.
Long Only.
(For Gleet.)
IN EACH BOUGIE.
Sulphate Zinc.....½ gr.
Carbolic Acid.....¼ "
Ext. Hydrastis.....1 "
Ext. Belladonna.....1 "

REGULAR No. 3.
Long and Short.
(For Acute Gonorrhœa.)
IN EACH BOUGIE.
Oxide Zinc.....2 grs.
Ext. Gelsemium.....2 "
Sulph Morphia. .....⅛ "
E. Aconite R. F.....1 "

Price per Box, to Physicians, $1.00.
Special rates for quantities.

PROSTATIC BOUGIES AND PROSTATIC BOUGIE CARRIER.

The MEDICATED PROSTATIC BOUGIES are short cylindrical suppositories, ½ inch long, and ⅛ inch diameter. With the aid of the BOUGIE CARRIER, they can be placed directly in contact with any local disease in the urethra, and by the immediate and pre-arranged action which their solution must occasion are calculated to produce a most decided impression upon the affected part.



Twenty-nine medications are now made. Among the most prominent are :

(1) Sulphate Zinc, ½ gr.
(5) Tannic Acid.....1 "
Iodoform.....1 "

(18) Ext. Gels. Fl., 5 grs.
Ergotin.....1 gr.
Sulph. Morphia ¼ "

(25) Ergotin.....1 gr.
(26) Iodoform.....1 "
(28) Liq. Iodinii C.....1 "

(27) Iodoform.....1 gr.
Ext Belladon.....½ "
(29) Carbolic Acid.....½ "
Liq. Iodinii C.....1 "

PRICE—BOUGIES, per Box, 50 cts., per dozen boxes, $5.00. CARRIERS, each, $2.00.

These goods can be obtained from the manufacturer,

CHARLES L. MITCHELL, M.D., Ninth & Race Sts., PHILADELPHIA.

Or from the following houses:

GILMAN BROTHERS, Boston; LAZELL, MARSH & GARDINER, New York: RICHARDSON & Co., St. Louis; E. H. SARGENT & Co., Chicago; B. BROEMMEL, Sixth and Mission Sts., San Francisco.

TO PHYSICIANS.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted, R. OGDEN DOREMUS, M.D., L.L.D.,

Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D

Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Inguvin, and find your pepsine equal to any of them.

Yours truly,

J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

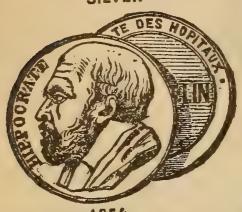
MATHEY-CAYLUS' GLUTEN

SILVER

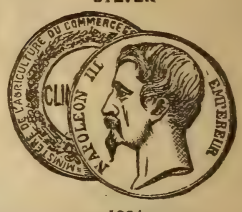


CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

SILVER

NEW HYPODERMIC SYRINGES.

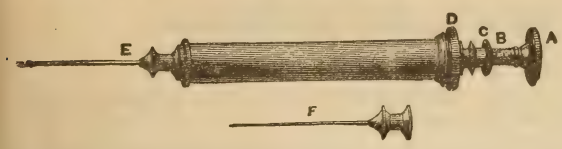

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

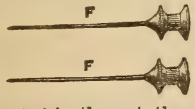
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).



No. 11.

		Postage
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris.

E. FOUGERA & CO., Agents, New York.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1851, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE**, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

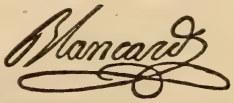
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

Grimault & Co.'s Pharmaceutical Products.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris

Offices and Salesrooms, No. 8 Rue Vivienne, Paris.

The attention of the Medical Profession is directed to a few leading products:

Dusart's Syrup and Wine of Lacto-Phosphate of Lime,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as a general excitant of all the nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament, specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free to any physician, on application to Messrs. E. FOUGERA & Co.

GRIMAULT & CO.'S MATICO CAPSULES.

These Capsules are coated with Gluten, and contain the essential Oil of Matico, combined with the Balsam of Copaiba solidified by Calcined Magnesia. Besides its very special activity, the Essence of Matico has the property of disinfecting the Balsam of Copaiba, and of making it endured by the stomach, and does not cause any unpleasant eructations.

LEBAIGUE'S DIALYSED IRON, or pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless; does not blacken the teeth; is very readily absorbed; will not constipate, or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of Iron. It is offered in the form of a *Solution*, which is generally preferred; or of an *Elixir*, when a slight stimulant is desired.

The above and all the other preparations of Messrs GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.

1342-67

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. DE JONGH's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. DE JONGH's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL

s sold ONLY in Capsuled Imperial Half-Pints. $1.00, by most Druggists throughout the United States.

THE BEST. ANGLO-SWISS MILK FOOD.

Used by more than 1500 Physicians in New York City alone

During the past year, with uniformly favorable results.

Prescribed by leading Practitioners of all Schools, and used in prominent Institutions throughout the Country.

CHEMICAL ANALYSIS AND OTHER RELIABLE TESTIMONY

Moisture	5 to 6 per ct.	Carbo-hydrates, insoluble in water	15 to 16 per ct.
Nitrogenous matter (Nitrogen 2.25 to 2.35)	14.5 " 15 "	Fat	4 " 5 "
Carbo-hydrates, soluble in water	54 " 55 "	Ash (inclusive of 0.6 Phosphoric Ac'd)	2 " 2.5 "

"The proportion of nitrogenous matter or plastic aliments to carbo-hydrates or respiratory constituents in mother's milk is 1:4.5, and in this food the proportion is practically the same, namely, 1:5.7. The fat, as a respiratory substance, is here reduced to the equivalent of starch.

"My analysis perfectly agrees with the analysis given on their labels, and bears witness to the excellent and rational manner in which this food is compounded." DR. E. GEISSLER, Dresden, April 10th, 1880.

"I have used Anglo-Swiss Milk Food in my practice, and commend it with confidence to those who may need it for Infants or Invalids. The introduction of the Anglo Swiss Milk Food into America is a great blessing to sick children, weary mothers and almost discouraged physicians, for medicine will not take the place of food."—
E. A. Jennings, M.D., Provident Dispensary, 62 West 14th St., New York.

"Used in New York Infant Asylum.—*J. Lewis Smith*, M.D.

"Has yielded most favorable results."—*J. C. Guernsey*, M.D., *Philadelphia.*

"The Diarrhœa had been persistent for four months, in spite of the use of other foods. After using two days the evacuations became normal, and the puny child is now plump and healthy."—*Geo. M. Ockford*, M.D., *Vincennes, Ind.*

"Used in our Seaside Nursery. It nourishes and strengthens every child to whom it is given."—*John W. Kramer*, M.D., *Master of St. John's Guild.*

"Our little ones love it. It regulates and strengthens the bowels."—*Sisters of Charity, St. Vincent's Home, Philadelphia.*

"We find that it agrees with each case."—*M. Spencer, Matron, Philadelphia Infants' Home.*

SAMPLE FURNISHED TO PHYSICIANS GRATIS ADDRESS ANGLO-SWISS COND. MILK CO., P. O. BOX 3773, N. Y.

DR. WHEELER'S

ELIXIR FERRI ET CALCIS PHOSPH. CO.

LACTO-PHOSPHATES prepared from the formula of DR. DUSART, of Paris.

Compound Elixir of Phosphates and Calisaya—A Chemical Food and Nutritive Tonic.

This elegant preparation combines with a sound Sherry Wine percolated through Wild Cherry Bark and Aromatics, in the form of an agreeable cordial, 2 *grs. Lacto-Phosphate of Lime*, 1 *gr. Lacto-phosphate of Iron*, 1 *gr. of Alkaloids of Calisaya Bark, Quinia, Quinidia, Cinchonia, and fifteen drops of free Phosphoric Acid, to each half ounce.*

In the various forms of Dyspepsia, resulting in impoverished blood and depraved nutrition, in convalescing from the Zymotic Fevers, Typhus, Typhoid, Diphtheria, Smallpox, Scarlatina, Measles, in nervous prostration from mental and physical exertion, dissipation and vicious habits, in chlorotic, anæmic women, in the strumous diathesis in adults and children, in malarial diseases, after a course of quinia, to restore nutrition, in spermatorrhœa, impotence and loss of sexual orgasm, it is a combination of great efficacy and reliability, and being very acceptable to the most fastidious, it may be taken for an indefinite period without becoming repugnant to the patient. When Strychnine is indicated the Liquor. Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle making the 64th of a grain to a half fluid ounce of the Elixir, a combination of a wide range of usefulness.

The chemical working of the formula is peculiar to the originator, and the various imitations and substitutes offered by druggists will not fill its place.

DOSE.—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age one dessert-spoonful; from two to seven, one teaspoonful.

Prepared by T. B. WHEELER, M.D., MONTREAL, D.C.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by WM. PROCTER, Jr., CO., S. W. Cor. 9th and Lombard Sts., Phila.

ANATOMICAL TECHNOLOGY,

AS APPLIED TO

THE DOMESTIC CAT.

An Introduction to Human, Veterinary, and Comparative Anatomy.

Royal Octavo, 600 Pages and 150 Figures, including Four Lithographic Plates of the Brain.

By BURT G. WILDER, B.S., M.D.,

Professor of Physiology, Comparative Anatomy, and Zoölogy in Cornell University, and of Physiology in the Medical School of Maine; Member of the American Neurological Association, and of the American Medical Association; Fellow of the American Association for the Advancement of Science, etc.,

AND

SIMON H. GAGE, B.S.,

Assistant Professor of Physiology and Lecturer on Microscopical Technology in Cornell University; Fellow of the American Association for the Advancement of Science, etc.

PRICE $4.50.

A Copy of the Preface and Table of Contents will be mailed upon application.

PROFESSOR T. B. STOWELL, of the State Normal School, Cortland, N. Y., writes as follows:—

"I know not where to begin, or where to end, when I review a work representing so much study, careful, painstaking observation, technical scholarship, gigantic indices, etc. The directions are lucid, easy of comprehension, and concise. I do not see how they can be improved. The figures far exceed my expectations, and must prove to be invaluable to all students of comparative anatomy. * * * I am delighted with the tabulations throughout the work. They are readily comprehended, after the study of the text, and give in a NUTSHELL whole pages of details."

The same authors have in preparation companion volumes, as follows: Microscopical Technology, as applied to the Frog, Necturus or Menobranchus, and Cat; Physiological Technology—Painless Experimentation (Callisection) upon the Frog and Cat.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 211 S. Front Street, Philadelphia.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

Prescribed with confidence by the Profession wherever they have been introduced.

1297-1348eow

PLEASE SPECIFY McK. & R. ON YOUR PRESCRIPTIONS.

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids, in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substance	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH
HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted, R. OGDEN DOREMUS, M.D., L.L.D.,
Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D
Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD;

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,
J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

Samples and Circulars sent to Druggists or Physicians on application to

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides	$2.00
Seven large Ivory Points, well charged on both sides	1.00
Large Ivory Points, less than seven, well charged on both sides, each	.25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use	2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred)	$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after offfcinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

{ BELLEVUE HOSPITAL MEDICAL COLLEGE,
{ NEW YORK, September 7, 1878.

MESSRS. SEABURY & JOHNSON:—

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

NEW YORK, June 7, 1878.

MESSRS. SEABURY & JOHNSON:—

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, **which result was corroborated by repeated trials.**

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow

21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cacherias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

THE VALUE OF NUTRITION

FOR INFANTS AND ADULTS IN HEALTH OR SICKNESS.

Statistics compiled in Germany show that of 100 children nursed by their mothers, only 18.2 died during the first year; of those nursed by wet-nurses, 29.33 died; of those artificially fed, 60 died; and of those brought up in iustitutions, 80 died to the 100. Again, taking 1000 well-to-do persons, and 1000 poor persons, there remained of the prosperous, after five years, 943, while of the poor only 665 remained alive; after fifty years there remained of the prosperous 557, and only 283 of the poor; at seventy years of age there remained of the prosperous 235, and but 65 of the poor. The total average length of life among the well-off class was found to be fifty years, as against thirty-two amongst the poor.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., French, Richards & Co., Boericke & Tafel; or you can order direct and we will pay express. 6 oz. 55 cents; 12 oz. $1.00.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 3 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only beef digested and rendered assimilable by a *Pepsin*, always titrated and regular, extracted from the stomach of the sheep, digesting 700 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action. These preparations come under three forms:—

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER. This has only the taste of meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grains of Peptone, or 21 to 22 grains of Beef, entirely digested and assimilable.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE. This article is a liquid, neutral aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHAPOTEAUT'S PEPSICAL PEPTONE WINE. Each small wine-glass contains the Pepsical Peptone of 10 grains of Beef. It has a very agreeable taste and constitutes an excellent aliment, which the patient accepts with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses.

MIDY'S ESSENCE OF SANDAL.

The Essence of Sandal is used with success in the place of Copaiba and Cubebs. It is inoffensive, even when taken in large doses. Its use does not occasion any indigestion or diarrhœa. The Sandal Midy is chemically pure, and is only sold in the form of Capsules.

IODIZED SYRUP OF HORSE RADISH.

The Iodized Syrup of Horse Radish is used in France, on a large scale, as a substitute for Cod-liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine, so intimately combined as to be insensible to the action of starch.

The above, and all the other preparations of Messrs. GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO. Importing Pharmacists, New York.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. De Jongh's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL

Is sold ONLY in Capsuled Imperial Half-Pints, $1.00, by most Druggists throughout the United States.

SOLE CONSIGNEES, ANSAR, HARFORD & CO., 77 STRAND, LONDON.

AGENTS IN THE UNITED STATES,

DR. WHEELER'S

ELIXIR FERRI ET CALCIS PHOSPH. CO.

LACTO-PHOSPHATES prepared from the formula of DR. DUSART, of Paris.

Compound Elixir of Phosphates and Calisaya—A Chemical Food and Nutritive Tonic.

This elegant preparation combines with a sound Sherry Wine percolated through Wild Cherry Bark and Aromatics, in the form of an agreeable cordial, 2 *grs. Lacto-Phosphate of Lime*, 1 *gr. Lacto-phosphate of Iron*, 1 *gr. of Alkaloids of Calisaya Bark, Quinia, Quinidia, Cinchonia, and fifteen drops of free Phosphoric Acid, to each half ounce.*

In the various forms of Dyspepsia, resulting in impoverished blood and depraved nutrition, in convalescing from the Zymotic Fevers, Typhus, Typhoid, Diphtheria, Smallpox, Scarlatina, Measles, in nervous prostration from mental and physical exertion, dissipation and vicious habits, in chlorotic, anæmic women, in the strumous diathesis in adults and children, in malarial diseases, after a course of quinia, to restore nutrition, in spermatorrhœa, impotence and loss of sexual orgasm, it is a combination of great efficacy and reliability, and being very acceptable to the most fastidious, it may be taken for an indefinite period without becoming repugnant to the patient. When Strychnine is indicated the Liquor. Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle making the 64th of a grain to a half fluid ounce of the Elixir, a combination of a wide range of usefulness.

The chemical working of the formula is peculiar to the originator, and the various imitations and substitutes offered by druggists will not fill its place.

Dose.—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age one dessertspoonful; from two to seven, one teaspoonful.

Prepared by T. B. WHEELER, M.D., MONTREAL, D.C.

UNIVERSITY OF PENNSYLVANIA.

MEDICAL DEPARTMENT.

POST-GRADUATE INSTRUCTION.

SEASON 1882-3.

The Post-Graduate Instruction for the year 1882-3 will be divided into three terms of two months each:—

(1) From Oct. 23d to Dec. 23d, inclusive.
(2) " Jan. 2d to Mar. 1st, "
(3) " April 9th to June 9th, "

Including a course of didactic lectures on Dermatology, Ophthalmology and Otology, extending over the four months occupied by the two winter courses, that is, from October 23d to March 1st.

The following subjects are taught practically and in limited classes at the hospitals and dispensaries to which the instructors are attached:—

Clinical Medicine and Physical Diagnosis, by Prof. Pepper and Dr. Bruen.
Renal Diseases, with Practical Examination of Urine, by Prof. Tyson
Nervous Diseases and Electro-Therapeutics, by Prof. Wood.
Clinical Surgery, by Prof. Ashhurst and Dr. Wharton.
Ophthalmology, by Prof. Norris and Dr. Risley.
Dermatology, by Prof. Duhring.
Otology, by Prof. Strawbridge.
Gynæcology, by Dr. Baer
Operative Surgery, by Dr. White.
Venereal Diseases, by Dr. White.
Clinical and Operative Obstetrics, by Dr. Richardson.
Laryngology, by Dr. Seiler.
Diseases of Children, by Dr. Starr and Dr. Keating.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.
Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa, etc.
Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.
For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.
It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"ITS VALUE INCREASES EVERY YEAR."—*The Churchman, N.Y.*

THE GREATEST LIVING AUTHORS, such as

Prof. MAX MULLER,	THE DUKE OF ARGYLL,	MATTHEW ARNOLD,
Rt. Hon. W. E. GLADSTONE,	WILLIAM BLACK,	J. NORMAN LOCKYER,
JAMES ANTHONY FROUDE,	Miss THACKERAY,	FRANCIS W. NEWMAN,
Prof. HUXLEY,	Mrs. MULOCK-CRAIK,	ALFRED RUSSELL WALLACE,
RICHARD A. PROCTOR,	GEORGE MACDONALD,	FRANCIS GALTON,
Prof. GOLDWIN SMITH,	Mrs. OLIPHANT,	W. H. MALLOCK,
EDWARD A. FREEMAN,	Mrs. ALEXANDER,	W. W. STORY,
Prof. TYNDALL,	Mrs. PARR,	RUSKIN,
Dr. W. B. CARPENTER,	JEAN INGELOW,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

IN 1883 THE LIVING AGE enters upon the fortieth year of its publication. Originally commended by President Adams, Judge Story, Chancellor Kent, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has constantly received the support of the best men and journals of the country, and has met with uninterrupted success. A WEEKLY MAGAZINE of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Leading Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress.

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"LITTELL'S LIVING AGE has now for many years held the first place of all our serial publications. . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. . The volumes, as they successively appear, must be the despair of the critic. They are so uniformly excellent, and with excellence of such a high character, that they exhaust his terms of praise."—*The Churchman, New York.*

"There is no better medium of keeping one's self well informed in regard to the intellectual condition of the day."—*New York Observer.*

"The ablest essays and reviews of the day are to be found here."—*The Presbyterian, Philadelphia.*

"It stands easily at the head of its class and deserves its prosperity."—*The Congregationalist, Boston.*

"No other publication can supply its place. It furnishes indispensable reading. . It contains not only the best solid literature, but also the best serial stories of the day. . Its pages are sufficient to keep any reader abreast with the best printed thoughts of the best of our contemporary writers."—*Episcopal Register, Philadelphia.*

"Whatever else in current literature we may have, we cannot well afford to be without THE LIVING AGE."—*Lutheran Observer, Philadelphia.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Pittsburgh Christian Advocate.*

"In no other form with which we are acquainted is so much valuable and interesting reading for so small an outlay placed within the reach of the public. . The indispensable among magazines."—*Pacific Churchman, San Francisco.*

"It is for readers of limited leisure or purse the most convenient and available means of possessing themselves of the very best results of current criticism, philosophy, science and literature."—*Presbyterian Banner, Pittsburgh.*

"Its weekly deliverances have been hailed with delight for more than a generation."—*Christian Register, Boston.*

"As much a necessity as ever."—*The Advance, Chicago.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"It retains its traits of catholicity, breadth of scope, and discriminating selection, which have marked it from the beginning. . It is simply indispensable."—*Boston Journal.*

"No other periodical can compare with it in interest and value."—*Boston Traveller.*

"No reader who makes himself familiar with its contents can lack the means of a sound literary culture."—*New York Tribune.*

"As well conducted as ever."—*New York World.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies. . In it we find the best productions of the best writers upon all subjects ready to our hand."—*Philadelphia Inquirer.*

"Since its first appearance, nearly forty years ago, it has been far ahead of all competition in English-speaking lands."—*Philadelphia Evening News.*

"It is indispensable in every household where any attempt is made to keep up with the current thought of the day."—*Hartford Courant.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"As much in the forefront of eclectic publications as at its start forty years ago."—*Cincinnati Gazette.*

"It being a weekly publication, is, comparatively speaking, the cheapest magazine published."—*Commercial Advertiser, Detroit.*

"Grows better as the years roll on."—*Indianapolis Journal.*

"It is the most valuable acquisition that could be made to any magazine table."—*Leavenworth Times.*

"The oldest and best."—*Courier-Journal, Louisville.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases."—*North American, Philadelphia.*

"The great eclectic of the world."—*Morning Star, Wilmington, N.C.*

"Whatever may be the competition for public favor, it always holds its place. . The best of magazines to subscribe to."—*Montreal Gazette.*

PUBLISHED WEEKLY, at $8.00 a year, *free of postage.*

☞ **TO NEW SUBSCRIBERS for the year 1883,** remitting before Jan. 1, the weekly numbers of 1882 issued after the reception of their subscriptions, will be sent *gratis.*

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of 'LITTELL'S LIVING AGE,' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Philadelphia Evening Bulletin.*]

For $10.50, THE LIVING AGE and any one of the *four-dollar* monthly magazines (or *Harper's Weekly* or *Bazar*) will be sent for a year, with postage prepaid on both; or, for $9.50, THE LIVING AGE and the *St. Nicholas* or *Lippincott's Monthly*, postpaid.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

SAMUEL R. PERCY, M.D., *Professor of Materia Medica, New York Medical College.*

F. LE ROY SATTERLEE, M.D., Ph.D., *Professor of Chemistry, Materia Medica and Therapeutics in N. Y. College of Dent.; Professor of Chemistry and Hygiene, Am. Vet. College, etc.*

JAS. AITKIN MEIGS, M.D., Philadelphia, Pa., *Professor of the Institutes of Medicine and Medical Jurisprudence, Jefferson Medical College; Physician to Pennsylvania Hospital.*

W. W. DAWSON, M.D., Cincinnati, Ohio, *Professor of Principles and Practice of Surgery, Medical College of Ohio; Surgeon to Good Samaritan Hospital.*

ALFRED F. A. KING, M.D., Washington, D. C., *Professor of Obstetrics, University of Vermont.*

D. W. YANDELL, M.D., *Professor of the Science and Art of Surgery and Clinical Surgery, University of Louisville, Ky.*

L. P. YANDELL, M.D., *Professor of Clinical Medicine, Diseases of Children, and Dermatology, University of Louisville, Ky.*

ROBT. BATTEY, M.D., Rome, Ga., *Emeritus Professor of Obstetrics, Atlanta Medical College; Ex-President Medical Association of Georgia.*

CLAUDE H. MASTIN, M.D., LL.D., Mobile, Ala.

PROF. H. C. BARTLETT, Ph.D., F.C.S., London, Eng.

PROF. JOHN ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., London, Eng., *Professor of Practical Chemistry to the Pharmaceutical Society of Great Britain.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

New York: 60 Maiden Lane and 21 Liberty Street.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight nas been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

MITCHELL'S

SOLUBLE MEDICATED GELATIN PREPARATIONS

For the Treatment of Gonorrhœa, Gleet, Prostatorrhœa, etc., etc.

TO THE PROFESSION.

The manufacturer desires to call the attention of Venereal Specialists and Surgeons to his remedies for the treatment of the different forms of urethral disease. Believing that a LEGITIMATE and NON-SECRET class of preparations of this character would be acceptable to the medical profession at large, instead of the thousand and one PATENT and PROPRIETARY articles with which the country is flooded, he has devised these goods, and now solicits from his fellow members of the profession both their sympathy and their support. The Soluble Medicated Gelatin Preparations are made for *physicians' use* and *prescriptions only*, and no other custom is either *sought for* or *desired.*

LONG SIZE.

SHORT SIZE.

URETHRAL BOUGIES.—Mitchell's Urethral Bougies were first presented to the profession about four years ago, as a new and convenient method of treatment. They are now recommended and in use by the most prominent specialists of this country and of Europe, while a large and constantly increasing sale, extending from New Zealand to Persia, is a sufficient proof that their value is both acknowledged and appreciated.

ADVANTAGES OF THE BOUGIE TREATMENT.

1. Local remedies, easily introduced, causing no pain or inconvenience.
2. They occupy but very little space, and can be carried in the pocket of the patient, thus avoiding the "tell-tale" appearance of bottles and syringes.
3. A thorough and prolonged action of the remedy is produced.
4. The formation of stricture is prevented, as the Bougie acts as a Tampon, separating the walls of the urethra and preventing adhesion.

Forty-five different medications are now made. Among the most prominent are :

REGULAR No. 1.
Short Only.
(For Sub-acute Gonorrhœa.)
IN EACH BOUGIE.
Sulphate Zinc.....1 gr.
Carbolic Acid.....¼ "
Ext. Hydrastis.....1 "
Ext. Belladonna.....1 "
Ext. Gelsemium.....¼ "

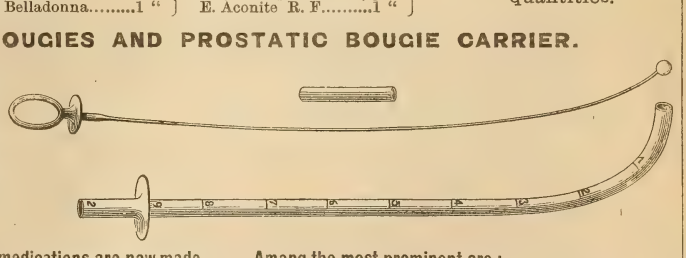
REGULAR No. 2.
Long Only.
(For Gleet.)
IN EACH BOUGIE.
Sulphate Zinc.....½ gr.
Carbolic Acid.....¼ "
Ext. Hydrastis.....1 "
Ext. Belladonna.....1 "

REGULAR No. 3.
Long and Short.
(For Acute Gonorrhœa.)
IN EACH BOUGIE.
Oxide Zinc.....2 grs.
Ext. Gelsemium.....2 "
Sulph Morphia.....¼ "
E. Aconite R. F.....1 "

Price per Box, to Physicians, $1.00.
Special rates for quantities.

PROSTATIC BOUGIES AND PROSTATIC BOUGIE CARRIER.

The MEDICATED PROSTATIC BOUGIES are short cylindrical suppositories, ½ inch long, and ⅛ inch diameter. With the aid of the BOUGIE CARRIER, they can be placed directly in contact with any local disease in the urethra, and by the immediate and pre-arranged action which their solution must occasion are calculated to produce a most decided impression upon the affected part.



Twenty-nine medications are now made. Among the most prominent are :

(1) Sulphate Zinc, ½ gr.
(5) Tannic Acid.....1 "
Iodoform.....1 "

(18) Ext. Gels. Fl., 5 grs.
Ergotin.....1 gr.
Sulph. Morphia ¼ "

(25) Ergotin.....1 gr.
(26) Iodoform.....1 "
(28) Liq. Iodinii C.....1 "

(27) Iodoform.....1 gr.
Ext Belladon.....½ "
(29) Carbolic Acid.....½ "
Liq. Iodinii C.....1 "

PRICE—BOUGIES, per Box, 50 cts., per dozen boxes, $5.00. CARRIERS, each, $2.00.

These goods can be obtained from the manufacturer,

CHARLES L. MITCHELL, M.D., Ninth & Race Sts., PHILADELPHIA.

Or from the following houses:

GILMAN BROTHERS, Boston; LAZELL, MARSH & GARDINER, New York: RICHARDSON & Co., St. Louis; E. H. SARGENT & Co., Chicago; B. BROEMMEL, Sixth and Mission Sts., San Francisco.

Send Stamp for large 12-page Illustrated Catalogue of Gelatin Preparations. 1297-1348eow

TO PHYSICIANS.

LISTERINE.

FORMULA.—Listerine is the *essential Antiseptic* constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis in combination Each *fluid drachm* also contains *two* grains of *refined* and *purified* Benzo-Boracic Acid.

DOSE.—One teaspoonful *three* or *more* times a day (as indicated). As a local application to ulcers, wounds and abscesses, or as a gargle, mouth wash, inhalant or injection, it can be used *ad libitum*, diluted as desired.

LISTERINE is a POWERFUL, SAFE and PLEASANT Antiseptic The beneficial results following its use in Phthisis, Diphtheria, Catarrh, Dysentery, Scarlatina, Erysipelas, Smallpox, Typhoid and Malarial Fevers, etc., proves it to be a Restorative Antiseptic of the very highest order of merit. It is the most efficient agent to disinfect the hands after surgical or gynecological operations, and is *the best* injection in Leucorrhœa, Gonorrhœa, etc., used in the proportion of from two to sixteen parts water, and one part Listerine.

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted, R. OGDEN DOREMUS, M.D., L.L.D.,

Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

131 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D

Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,

J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

Prof. Materia Medica and Therapeutics, Albany Medical College.

J. L. WHITE, M.D., BLOOMINGTON, ILL.
Ex-President Illinois State Medical Society.

BROMIDIA.

FORMULA.—Every *fluid drachm* contains fifteen grains EACH of pure Brom.-Potas. and *purified* Chloral, and one-eighth grain EACH of *gen. imp ext.* Cannabis-Ind. and Hyoscyam.

DOSE.—*One-half* to *one fluid drachm* in WATER or SYRUP, every hour until sleep is produced.

BROMIDIA is *the* Hypnotic *par excellence*. It produces refreshing sleep, and is *exceedingly* valuable in Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, etc., and will relieve *when opiates fail. Unlike* preparations of opium, *it does not lock up the secretions.* In the Restlessness and Delirium of Fevers *it is absolutely invaluable.*

Grimault & Co.'s Pharmaceutical Products.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 8 Rue Vivienne, Paris.

The attention of the Medical Profession is directed to a few leading products:

Dusart's Syrup and Wine of Lacto-Phosphate of Lime,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as a general excitant of all the nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament, specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free to any physician, on application to Messrs. E. FOUGERA & Co.

GRIMAULT & CO.'S MATICO CAPSULES.

These Capsules are coated with Gluten, and contain the essential Oil of Matico, combined with the Balsam of Copaiba solidified by Calcined Magnesia. Besides its very special activity, the Essence of Matico has the property of disinfecting the Balsam of Copaiba, and of making it endured by the stomach, and does not cause any unpleasant eructations.

LEBAIGUE'S DIALYSED IRON, or pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless; does not blacken the teeth; is very readily absorbed; will not constipate, or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of Iron. It is offered in the form of a *Solution*, which is generally preferred; or of an *Elixir*, when a slight stimulant is desired.

The above and all the other preparations of Messrs GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.

1329-67

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by WM. PROCTER, Jr., CO., S. W. Cor. 9th and Lombard Sts., Phila.

THE PHYSICIAN'S CLINICAL RECORD AND CASE BOOK. FOR 100 PATIENTS.

Neatly Bound in Cloth, with Pocket and Stencil Plate, Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms of preserving the records of cases. A brass Stencil Plate accompanies each book, for rapidly sketching an outline of the body, in which may be marked, by shading, the seat of effusions, etc., or the size and position of organs, tumors, etc.

Several pages of Prefatory matter are given, presenting in the most succinct form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients; 2. Symptoms of Poisoning, etc.; 3. The Urine in Disease. Ruled Temperature Charts are added.

D. G. BRINTON, M.D., 115 South Seventh St., Philadelphia.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. De Jongh's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL

Is sold ONLY in Capsuled Imperial Half-Pints, $1.00, by most Druggists throughout the United States.

SOLE CONSIGNEES, ANSAR, HARFORD & CO., 77 STRAND, LONDON.

AGENTS IN THE UNITED STATES,

E. FOUGERA & CO., 30 NORTH WILLIAM STREET, NEW YORK 1343-68

DR. WHEELER'S

ELIXIR FERRI ET CALCIS PHOSPH. CO.

LACTO-PHOSPHATES prepared from the formula of DR. DUSART, of Paris.

Compound Elixir of Phosphates and Calisaya—A Chemical Food and Nutritive Tonic.

This elegant preparation combines with a sound Sherry Wine percolated through Wild Cherry Bark and Aromatics, in the form of an agreeable cordial, 2 *grs. Lacto-Phosphate of Lime*, 1 *gr. Lacto-phosphate of Iron*, 1 *gr. of Alkaloids of Calisaya Bark, Quinia, Quinidia, Cinchonia, and fifteen drops of free Phosphoric Acid, to each half ounce.*

In the various forms of Dyspepsia, resulting in impoverished blood and depraved nutrition, in convalescing from the Zymotic Fevers, Typhus, Typhoid, Diphtheria, Smallpox, Scarlatina, Measles, in nervous prostration from mental and physical exertion, dissipation and vicious habits, in chlorotic, anæmic women, in the strumous diathesis in adults and children, in malarial diseases, after a course of quinia, to restore nutrition, in spermatorrhœa, impotence and loss of sexual orgasm, it is a combination of great efficacy and reliability, and being very acceptable to the most fastidious, it may be taken for an indefinite period without becoming repugnant to the patient. When Strychnine is indicated the Liquor. Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle making the 64th of a grain to a half fluid ounce of the Elixir, a combination of a wide range of usefulness.

The chemical working of the formula is peculiar to the originator, and the various imitations and substitutes offered by druggists will not fill its place.

Dose.—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age one dessertspoonful; from two to seven, one teaspoonful.

Prepared by T. B. WHEELER, M.D., MONTREAL, D.C.

Please mention THE MEDICAL AND SURGICAL REPORTER. 1345 96

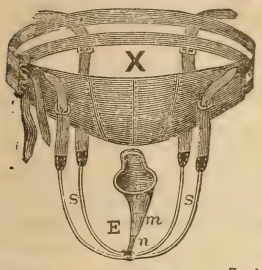
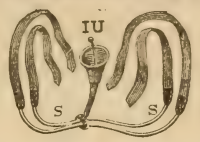
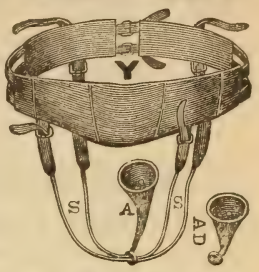
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

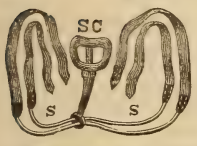






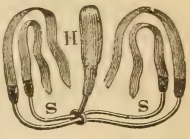
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7 00.

Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

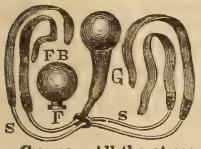


Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

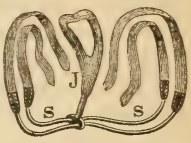
Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.



Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

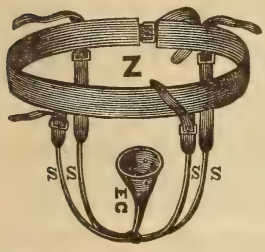


Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

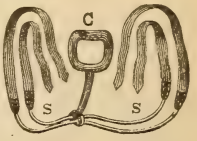


Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

ECONOMY AND PERMANENT STEMS.



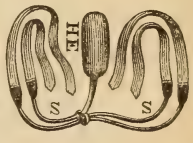
Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4 50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y, $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I. on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E or H E.



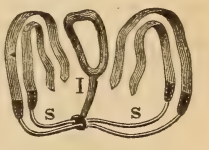
Belts.—X, and Y have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than anything or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1 50 each.



Selection.—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2. and procidentia, 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

COSMOLINE

Unguentum Petrolei

Prepared by E F Houghton & Co Philadelphia U S A

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,

JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

S. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

New York.

COCA.

(Erythroxylon Coca.)

THE properties of this drug have long been familiar to the natives of Bolivia and Peru, to which countries it is indigenous. It is a powerful nervous stimulant, and increases the power of the muscular system to sustain fatigue. It has also a pleasant, general, excitant influence, removing fatigue and languor. Its effect on the brain is to stimulate that organ to greater activity, and to relieve the mind of the depression incident to worry and anxiety.

Considerable interest has been excited in this new remedy by the report of Prof. E. R. Palmer, M.D., of the University of Louisville, on its efficacy in the

Treatment of the Opium Habit.

Prof. Palmer found it of very extraordinary benefit in relieving the bodily and mental misery which follows the withdrawal of opium in the case of those addicted to its use—a misery which drives them again to the drug for temporary relief, only again to be similarly tortured when it is again withheld.

In testing a remedy with such important ends in view, it is desirable to be assured of the genuineness of the drug employed.

It was with our preparation of coca that Prof. Palmer conducted the experiments which led him to make the favorable report on the use of the drug.

PARKE, DAVIS & CO., Manufacturing Chemists.
DETROIT, MICHIGAN.

RHAMNUS PURSHIANA.

(CASCARA SAGRADA.)

It is scarcely necessary at this day to call the attention of the medical profession to the singular cathartic properties of this drug. Any argument on this point would be nearly as superfluous as would be an argument on the anodyne properties of opium. Rhamnus purshiana has gone through an ordeal which nothing but its inherent worth could have qualified it to pass through; it has compelled an acknowledgment of its merit from those most bitterly prejudiced against it, and it stands now universally conceded to be the most reliable agent in the hands of the physician for the treatment of chronic constipation.

We desire, at this time, merely to call attention to the fact that there are spurious preparations of the drug in the market, and that it is to the use of these that any wrong estimate of its properties is due. Piqued at the success of our enterprise in securing control of the entire crop of the season of 1878, unscrupulous competitors sought to prejudice the profession by charging that Cascara Sagrada was a compound to which we had given a fictitious name, and they even succeeded in causing some reputable members of the medical profession to view our introduction of it in that light. Among the latter, Dr Gibbons, of the *Pacific Medical and Surgical Journal*, was prominent. This gentleman was, however, soon convinced of his error, and in a very honorable manner retracted his statements. Foiled in this attempt, the next plan these parties adopted, and are now pursuing, was to place on the market a preparation of a species of the rhamnus, claiming it to be the rhamnus purshiana. Taking advantage of the reputation which our preparation of the genuine drug had won, they, by offering theirs at a price at which it would be impossible to sell the true article, have succeeded in placing a considerable quantity of this spurious variety on the market. The consequence has been to create a wrong estimate of the value of rhamnus purshiana with those who have not tried samples of the true drug.

We are in a position, furthermore, to state that the variety sold to our competitors by California drug dealers is not the true drug. We secure our drug through no dealers, but have our agents who supervise the gathering and drying of the bark, and are thus able to assure physicians that in ordering our preparation they may rely on securing an article whose use will be followed by all the results which we claim for it.

It, therefore, becomes absolutely necessary for us, in the interests both of the profession and of the drug, to place those who may prescribe Rhamnus Purshiana, on their guard against the trickery which is being practiced to injure the reputation of this unmistakably valuable agent.

PARKE DAVIS & Co., Manufacturing Chemists,

1297-1248

DETROIT MICH.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.
The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE { Aloin, 1-5 gr. / Strychnine, 1-60 gr. } . . . per 100, 60c.
A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.
The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. { Atropia 1-300 gr. / Morphia, 1-24 gr. } . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. { Atropia, 1-60 gr. / Morphia, 1-8 gr. } . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. { Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr. } . . per 100, 1.50.

McK. & R. DIURETIC. { Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr. } . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " = 30 grs. " "), . $1.60.
" " " 5 grs. (" " = 50 grs. " "), . 2.40.
We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)

WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. { Ergotin Purif., 1 gr. / Aloin, 1-2 gr. } . . . per 100, $1.25.
The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. { Ergotin Purif., 1 gr. / Ext. Cannab. Indic., 1-2 gr. } . per 100, $1.25.
Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.
Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., ... per 100, 60c.
Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. { Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs. } . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, { Iodoformum, 1 gr. / Pulv. Opii, 1 gr. } . . . . per 100, $1.50.
Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.

{ Ext. Coloc. Comp. pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr. }

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.
The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1-16, 1-10, 1-8, 1-6, and 1-4 gr.
We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.
Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.
A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr. } . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. { Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr. } . . per 100, $2.50.

Send for Seventh Edition of our Formula Book.

Specify McK. & R., to avoid substitution and consequent disappointment. Request the druggists to stock McK. & R.'s.

1297-1348-eow

SCOTT & BOWNE'S
SOLUBLE BEEF.
PEPTONIZED & GRANULATED.

We offer this preparation of Beef to the Profession with full confidence that it will merit their approval and endorsement, and believe it is something they will find of great value constantly in their practice.

It contains not only the flavor and extractive principles of the meat, such as is found in Liebig's Extract, or in home-made beef tea, but also the Proteine substance (Albuminoids, in a soluble and partially digested or peptonized condition, retaining very perfectly the natural flavor of the meat, and easily assimilated by the most feeble stomach. The profession are aware of the worthlessness of beef tea made by boiling the meat, or that which is made from *beef extracts*. The albuminoids must be embraced in the preparation, to make it useful as food for the invalid, and we believe we have more fully accomplished this by our process in a more practical and better commercial form than has heretofore been done. We herewith give an exhaustive and careful analysis by Professor Tsheppe, who has devoted a great deal of time to the subject of albuminous foods and the comparative values of the various meat preparations in the market.

Analysis of Scott & Bowne's Soluble Beef, "Granulated:"

Water	*11.82*
Ash or Mineral Substance	*14.66*
Peptones, total	*38.65*
Soluble Extractive Matter	*34.87*
	100.00

1030 Park Avenue, New York, May 30th, 1882.

MESSRS. SCOTT & BOWNE,

Gentlemen:—Conforming with your request to examine your preparation of Soluble Beef I have done so and give you chemical analysis as above. While your preparation embodies all the constituents of the ordinary Beef Extracts there is a net gain of over 50 per cent. of the nutritious proteine substances in the soluble state, more than half of which is peptonized and available for immediate assimilation, while the accustomed Beef Extracts are either devoid of them or do not contain them in the dissolved state.

Your choice of the granulated condition is commendable for its insured keeping qualities as well as from the economical standpoint of the buyer.

ADOLPH TSHEPPE, P. D.

IN THE PREPARATION OF OUR SOLUBLE BEEF

we claim to have accomplished very fully what the demands of the profession have been, viz.: To furnish to their patients a liquid food possessing the actual nutritious elements of the meat in, as nearly as practicable, a digested form ready for being easily admitted into the system.

A trial of our preparation will convince them of its highly nourishing properties, and prove to them, conclusively, the great value of the albuminoids in a peptonized or partially digested condition. It is prepared in a powdered form, and dissolves instantly in boiling water, and can be administered in the dry form or readily made into a palatable beef tea or soup. It is put up in one-quarter and one-half pound cans, and retails for fifty cents and one dollar.

SCOTT'S EMULSION
PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.
PERFECT, PERMANENT, PALATABLE.

THE WELL-KNOWN VIRTUES of this preparation, that has now been before the profession for a number of years, hardly require comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST—We use in the manufacture of our Emulsion Cod-liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the physician.

SECOND—By our process of Emulsifying we so thoroughly incorporate the oil with the Hypophosphite Salts that the mixture is perfectly homogeneous, and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs, without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession that adhere to the use of plain oil, but, with all due deference, if they will make a trial of our Emulsion we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous foods, cereals, and so-called constructive agents, of uncertain value, that are being introduced, the physician must sometimes be at a loss to know what to prescribe; but we are assured that the profession will bear us out in the statement that in all Pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children, and in Anæmic women of Consumptive tendencies, as well as in General Nervous Debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed it, or seen its results, to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of Pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda, to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL,
RHAMNUS FRANGULA,

Is giving universal satisfaction to the profession for its mild but certain and efficient cathartic action. It seems to be almost a specific for Habitual Constipation, and we are constantly in receipt of the most flattering reports regarding it. Send for samples.

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

1306-1357eow

BE PARTICULAR TO GET THE GENUINE

KIDDER'S SACCHARATED PEPSINE.

TAKE NO OTHER.

OUR PEPSINE IS NOT SOLD IN BULK.

The only way you can get the genuine is in original packages, as follows:

ONLY STYLES OF KIDDER'S SACCHARATED PEPSINE.

One-ounce, four ounce, and eight ounce oblong white flint glass bottles, with our name (Kidder & Laird) blown in the bottles, and sixteen-ounce round (plain) bottles, all having on them our metallic caps and labels. THESE ONLY STYLES, THE GENUINE, **are sold at 35 cents per ounce, and 4.50 per pound.**

PROF. DOREMUS' TEST.

THE COLLEGE OF THE CITY OF NEW YORK, Cor. Lexington Ave. and 23d Street.

This is to certify that I received from my son, Thomas C. Doremus, Jr., a sample of pepsine obtained by him at MESSRS. KIDDER & LAIRD'S, 83 John Street, New York, from a barrel containing 200 pounds of the same. That I have made ten determinations of the solvent power of this pepsine, with the following result: Ten grains of the pepsine placed in an ounce of distilled water, with ten drops of hydrochloric acid, and kept at the temperature of the human body for six hours, with frequent agitation, dissolved 197.1 grains of coagulated albumen out of 200 grains.

Respectfully submitted,

R. OGDEN DOREMUS, M.D., L.L.D.,

Prof. Chemistry and Physics, College City of New York, and Prof. Chemistry and Toxicology, Bellevue Hosp. Med. Col.

TESTIMONIALS.

LAKEPORT, CAL., Aug. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine in several cases of catarrh of the stomach, where all other pepsines have failed. The Lactopeptine I cannot give to children at all, and find your pepsine acts nicely.

Yours, etc. P. H. THORNTON, M.D.

INDIANAPOLIS, IND., July 12, 1878.

KIDDER & LAIRD:

Gentlemen:—Have given Kidder's Saccharated Pepsine in a number of cases of dyspepsia; also given it to the physicians in this locality, who were well pleased with the superior quality of it.

Yours, etc., S. J. HILMAN, M.D.

SOUTH BEND, IND., Oct. 22, 1878.

KIDDER & LAIRD:

Gentlemen:—I have Used Kidder's Saccharated Pepsine in some very aggravated cases of indigestion, and have found it to equal any pepsine I have ever used.

Yours respectfully, O. P. BARBOUR, M.D.

ANNAPOLIS, June 20, 1878.

KIDDER & LAIRD:

Gentlemen:—Since the reception of your sample of Kidder's Saccharated Pepsine we have used no other. We consider it a first-class preparation. We have never heard anything to the contrary. We shall continue to dispense it, unless well-founded objections are made, which we do not fear.

Yours etc., J. F. PERKINS & BRO.

181 LEXINGTON ST., BALTIMORE, MD.

KIDDER & LAIRD:

Gentlemen:—Have used Kidder's Saccharated for the past year with entire satisfaction. I use no other, except specially prescribed.

Yours etc., H. C. MOORE, M.D.

NORTH BROOKFIELD, MASS., May 18, 1877.

KIDDER & LAIRD:

Gentlemen:—I have tested the sample (chemically) of Pepsine you sent me, and find it to be superior to that I have been in the habit of prescribing (Hawley's).

Yours truly, L. A. VAN WAGNER, M.D.

ALLENVILLE, MO., May 28, 1878.

KIDDER & LAIRD:

Gentlemen:—As you will remember sending me four ounces of your Saccharated Pepsine, please permit me to say, in justice to yourselves, that I believe it to be the most efficacious of all the preparations of pepsine now in use. I have used it in three well-defined cases of dyspepsia with success, when the others had failed, except to give slight relief. I shall use it in all cases of indigestion hereafter.

Yours respectfully, A. P. REED, M.D.

PORTSMOUTH, N. H., Aug. 19, 1878.

KIDDER & LAIRD:

Gentlemen:—I have used the Kidder's Saccharated Pepsine, and have taken considerable trouble to test it and watch its action. I think it superior to any preparation I have ever. used containing pepsine,—*not even excepting Lactopeptine.*

Yours, etc., J. C. WHITTIER, M.D.

AMELIA, OHIO.

MESSRS KIDDER & LAIRD:

Gentlemen:—The Kidder Saccharated Pepsine sent to me was of an excellent quality, and gave general satisfaction, after which I ordered more of it, and have used nearly all of the second installment. Your pepsine is not only *cheap*, but it is one of the very *best* articles of pepsine in the market.

Very respectfully, M. M. INGALLS, M.D

Ex-Pres't Nat'l E. M. M. Assoc.

PHILADELPHIA, PA., 2280 FRANKFORD AVE.

KIDDER & LAIRD:

Gentlemen:—Since the receipt and trial of your sample of Kidder's Saccharated Pepsine I have used four pounds of it, and come to the conclusion that it fully answers all the purposes that can be reasonably expected from the use of "Pepsine" equally as well as the highest-priced articles, which I only keep on hand in case they are prescribed by other physicians. In my own practice I use your pepsine exclusively.

Yours respectfully FRED. PLEIBEL, M.D.

NORFOLK, VA., Sept. 23, 1878.

KIDDER & LAIRD:

Gentlemen:—The report from the physicians who have had samples of your pepsine is found in their continued use of it in their prescriptions on my file, and who have told me that it fulfills all that could be desired of a pure and unadulterated pepsine. In my own practice I have carefully noted its effects; have placed it in comparison with Boudault's, Scheffer's, and Hawley's; in each case, whether fancied or real, the disposition to nausea has been less out of your preparation than with any other. I shall continue to keep that, and that only, on my prescription counter.

Yours truly, J. W. THOMAS, Jr.

CHATHAM, CANADA WEST, Nov. 2, 1878.

KIDDER & LAIRD:

Gentlemen:—I find your pepsine acts well in all the cases in which I have tried it. I have been in the habit of using almost all the different makes of pepsine, French, English and American, as well as Lactopeptine and Ingluvin, and find your pepsine equal to any of them.

Yours truly,

J. C. BRIGHT, M.D., M.C.P., and P.O.

We have over 5000 letters from physicians and druggists endorsing and recommending KIDDER'S SACCHARATED PEPSINE. The quality is the best, and the price lowest in market.

Samples and Circulars sent to Druggists or Physicians on application to

KIDDER & LAIRD, 83 John Street, N. Y.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

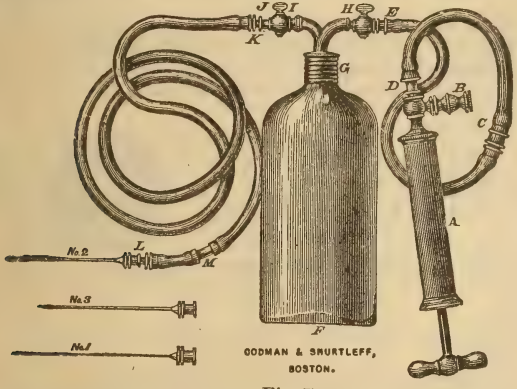

Fig. 77.

Fig. 68.

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing, as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold-plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions, $16.00. Postage 64 cents

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78), to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions, $14.00 Postage 32 cents.

No. 4. Stomach attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional, $6.00. Postage, 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration**, post-paid, by mail, on receipt of $3.40.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow **21 PLATT STREET, NEW YORK.**

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cacherias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

ARTIFICIALLY DIGESTED BEEF,

OR BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

THE VALUE OF NUTRITION

FOR INFANTS AND ADULTS IN HEALTH OR SICKNESS.

Statistics compiled in Germany show that of 100 children nursed by their mothers, only 18.2 died during the first year; of those nursed by wet-nurses, 29.33 died; of those artificially fed, 60 died; and of those brought up in iustitutions, 80 died to the 100. Again, taking 1000 well-to-do persons, and 1000 poor persons, there remained of the prosperous, after five years, 943, while of the poor only 665 remained alive; after fifty years there remained of the prosperous 557, and only 283 of the poor; at seventy years of age there remained of the prosperous 235, and but 65 of the poor. The total average length of life among the well-off class was found to be fifty years, as against thirty-two amongst the poor.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations of food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton, and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggist, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., French, Richards & Co., Boericke & Tafel; or you can order direct and we will pay express. 6 oz. 55 cents; 12 oz. $1.00.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

Offices and Salesrooms, No. 3 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only beef digested and rendered assimilable by a *Pepsin*, always titrated and regular, extracted from the stomach of the sheep, digesting 700 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action. These preparations come under three forms:—

1st. **CHAPOTEAUT'S PEPSICAL PEPTONE POWDER.** This has only the taste of meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grains of Peptone, or 21 to 22 grains of Beef, entirely digested and assimilable.

2d. **CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE.** This article is a liquid, neutral aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. **CHAPOTEAUT'S PEPSICAL PEPTONE WINE.** Each small wine-glass contains the Pepsical Peptone of 10 grains of Beef. It has a very agreeable taste and constitutes an excellent aliment, which the patient accepts with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses.

MIDY'S ESSENCE OF SANDAL.

The Essence of Sandal is used with success in the place of Copaiba and Cubebs. It is inoffensive, even when taken in large doses. Its use does not occasion any indigestion or diarrhœa. The Sandal Midy is chemically pure, and is only sold in the form of Capsules.

IODIZED SYRUP OF HORSE RADISH.

The Iodized Syrup of Horse Radish is used in France, on a large scale, as a substitute for Cod-liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine, so intimately combined as to be insensible to the action of starch.

The above, and all the other preparations of Messrs. GRIMAULT & CO., and information in regard to the same, may be obtained at all times from

Messrs. E. FOUGERA & CO. Importing Pharmacists, New York.

1 42-7oew

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1329-1348

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

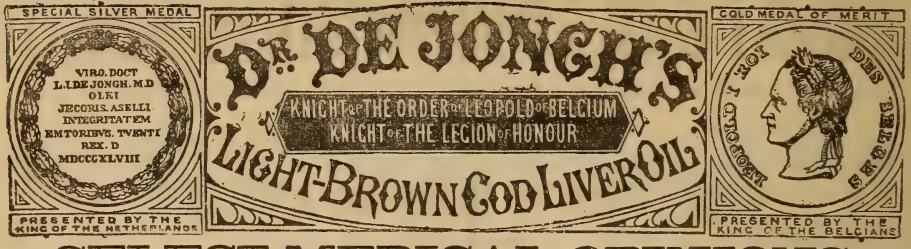
Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

1297-1348-eow



SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,

Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed Dr. De Jongh's Light Brown Cod-liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,

Author of "The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties, and I am satisfied that for medicinal purposes no finer Oil can be procured."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,

Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Cod-liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. PROSSER JAMES,

Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-liver Oil as the best on the subject, and adopted its conclusions as to the superiority of the Light Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense, since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL

Is sold ONLY in Capsuled Imperial Half-Pints, $1.00, by most Druggists throughout the United States.

SOLE CONSIGNEES, ANSAR, HARFORD & CO., 77 STRAND, LONDON.

AGENTS IN THE UNITED STATES,

E. FOUGERA & CO., 30 NORTH WILLIAM STREET, NEW YORK 1343-68

DR. WHEELER'S

ELIXIR FERRI ET CALCIS PHOSPH. CO.

LACTO-PHOSPHATES prepared from the formula of DR. DUSART, of Paris.

Compound Elixir of Phosphates and Calisaya—A Chemical Food and Nutritive Tonic.

This elegant preparation combines with a sound Sherry Wine percolated through Wild Cherry Bark and Aromatics, in the form of an agreeable cordial, 2 *grs. Lacto-Phosphate of Lime*, 1 *gr. Lacto-phosphate of Iron*, 1 *gr. of Alkaloids of Calisaya Bark, Quinia, Quinidia, Cinchonia, and fifteen drops of free Phosphoric Acid, to each half ounce.*

In the various forms of Dyspepsia, resulting in impoverished blood and depraved nutrition, in convalescing from the Zymotic Fevers, Typhus, Typhoid, Diphtheria, Smallpox, Scarlatina, Measles, in nervous prostration from mental and physical exertion, dissipation and vicious habits, in chlorotic, anæmic women, in the strumous diathesis in adults and children, in malarial diseases, after a course of quinia, to restore nutrition, in spermatorrhœa, impotence and loss of sexual orgasm, it is a combination of great efficacy and reliability, and being very acceptable to the most fastidious, it may be taken for an indefinite period without becoming repugnant to the patient. When Strychnine is indicated the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle making the 64th of a grain to a half fluid ounce of the Elixir, a combination of a wide range of usefulness.

The chemical working of the formula is peculiar to the originator, and the various imitations and substitutes offered by druggists will not fill its place.

Dose.—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age one dessert-spoonful; from two to seven, one teaspoonful.

Prepared by T. B. WHEELER, M.D., MONTREAL, D.C.

Please mention THE MEDICAL AND SURGICAL REPORTER. 1345-96

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will commence September 27th, 1882, and Close at the Beginning of the Regular Term.

The Regular Term will Open January 24th, 1883, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory work, Lectures and Clinics.

In the Regular Term the Laboratory work, Lectures and Clinics are supplemented by oral and written examinations: and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. -eow

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Clinical Professor of Oral Surgery and Diseases of the Mouth.

SAMUEL J. LIGGETT, M.D.,
Demonstrator of Chemistry and Chief of the Medical Dispensary.

Three Years' Graded Course. **Clinics Daily.**

THE AUXILIARY LITERARY TERM commences on the third Monday in April and continues until June 30th.

THE AUTUMN PRELIMINARY TERM begins on the first Monday in September and continues four weeks.

THE WINTER SESSION commences on the first Monday in October and continues six months.

The Faculty of the Medico-Chirurgical College desire to call the attention of Medical Students generally to the unsurpassed advantages for both Didactic and Clinical Instruction afforded by the curriculum of the College. Daily Review Examinations are held by the members of the Faculty, upon the subjects of the didactic lectures—no outside quizzes are allowed. Practical Clinical Instruction is a marked feature of the Course. Every Student is *required*, by the rules of the College, to examine and study cases at the different clinics and give attendance to Practical Chemistry and Pharmacy, in the Laboratories of the College, also, the study of Practical Anatomy, Operative Surgery and Bandaging, Physical Diagnosis, Practical Gynæcology and Analysis of the Urine, is *obligatory* on each member of the class. In addition to the regular daily clinics of the College, Special Clinical Lectures will be delivered during the Winter Session, by a corps of Clinical Professors, on different diseases, such as those of the Eye and Ear, Throat, Nervous System, Skin, Diseases of the Mouth, etc. They will be the same as those usually given in the Spring term of other Medical Colleges. All these courses are *without extra charge*, except that of Practical Anatomy. In addition there is an Auxiliary Literary Term, for the especial benefit of those Students who may desire the advantages of a thorough English and Classical Education. The Medico-Chirurgical College is the first Medical College to take this important step. For further particulars and announcements, address the Secretary of the College,

PROF. C. L. MITCHELL,
112 N. 34th Street, Philadelphia, Pa.

A MANUAL OF OPHTHALMIC PRACTICE,

BY HENRY S. SCHELL, M. D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc.

With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on ophthalmic practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

EXTRACT FROM THE PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of Ophthalmology, and to describe those methods of treatment which he has become accustomed to rely upon from personal experience of their value.

CONTENTS.

CHAPTER I.—Anatomy and Physiology of the Eye. CHAPTER II.—Affections of the Eyelids. CHAPTER III.—Disorders of the Lachrymal Apparatus. CHAPTER IV.—Disorders of the Conjunctiva. CHAPTER V.—The Ophthalmoscope. CHAPTER VI.—Refraction and Accommodation and their Anomalies. CHAPTER VII.—Disorders of the Ocular Nerves and Muscles. CHAPTER VIII.—Diseases of the Cornea and Sclerotic. CHAPTER IX.—Diseases of the Iris, Choroid and Ciliary Body. CHAPTER X.—Diseases of the Crystalline Lens. CHAPTER XI.—Diseases of the Vitreous. CHAPTER XII.—Diseases of the Retina and Optic Nerve. CHAPTER XIII.—Disorders of the Eyeball. CHAPTER XIV.—Diseases of the Orbit.

D. G. BRINTON, 115 S. Seventh Street, Philadelphia.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Disease

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE

Demonstrated Superiority of Lactopeptine as a Digestive Agent.

Certificate of Composition and Properties of Lactopeptine, by Prof. ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain.

LONDON, May 3, 1882.

Lactopeptine having been prescribed for some of my friends during the past five years—apparently with very satisfactory results—its formula, which is stated on the bottles, and its general characters, have become well known to me. But recently, the manufacturer of this article has asked me to witness its preparation on a large scale, to take samples of its ingredients from large bulks, and examine them, and also mix them myself, and to prepare *Lactopeptine* from ingredients made under my own direction, doing all this with the object of certifying that *Lactopeptine* is what its makers profess it to be, and that its ingredients are in quality the best that can be obtained. This I have done, and now report that the almost inodorous and tasteless pulverulent substance termed *Lactopeptine* is a mixture of the three chief agents which enable ourselves and all animals to digest food. That is to say, *Lactopeptine* is a skillfully prepared combination of meat-converting, fat-converting, and starch-converting materials, acidified with those small portions of acids that are always present in the healthy stomach; all being disseminated in an appropriate vehicle, namely, powdered sugar of milk. The acids used at the factory—lactic and hydrochloric—are the best to be met with, and are perfectly combined to form a permanent preparation; the milk sugar is absolutely pure; the powder known as "diastase," or starch-digesting (bread-, potato- and pastry-digesting) material, as well as the "pancreatin," or fat-digesting ingredients, are as good as any I can prepare; while the pepsin is much superior to that ordinarily used in medicine. Indeed, as regards this chief ingredient, pepsin, I have only met with one European or American specimen equal to that made and used by the manufacturer of *Lactopeptine*. A perfectly parallel series of experiments showed that any given weight of acidified pepsin, alone, at first acts somewhat more rapidly than *Lactopeptine* containing the same weight of the same pepsin. Sooner or later, however, the action of the *Lactopeptine* overtakes and outstrips that of the pepsin alone, due, no doubt, to the meat-digesting as well as the fat-digesting power of the pancreatin contained in the *Lactopeptine*. My conclusion is that *Lactopeptine* is a most valuable digesting agent, and superior to pepsin alone.

JOHN ATTFIELD.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to its conversion into chyle, thus combining all the principles required to promote a Healthy Digestion.

One of its chief features (and the one which has gained it a preference over all digestive preparations) is that it precisely represents in composition the natural digestive juices of the stomach, pancreas and salivary glands, and will therefore readily dissolve all foods necessary to the recuperation of the human organism.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin, or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatin	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested LACTOPEPTINE, recommend it to the profession.

ALFRED L. LOOMIS, M.D., *Professor of Pathology and Practice of Medicine, University of the City of New York.*

SAMUEL R. PERCY, M.D., *Professor of Materia Medica, New York Medical College.*

F. LE ROY SATTERLEE, M.D., Ph.D., *Professor of Chemistry, Materia Medica and Therapeutics in N. Y. College of Dent.; Professor of Chemistry and Hygiene, Am. Vet. College, etc.*

JAS. AITKIN MEIGS, M.D., Philadelphia, Pa., *Professor of the Institutes of Medicine and Medical Jurisprudence, Jefferson Medical College; Physician to Pennsylvania Hospital.*

W. W. DAWSON, M.D., Cincinnati, Ohio, *Professor of Principles and Practice of Surgery, Medical College of Ohio; Surgeon to Good Samaritan Hospital.*

ALFRED F. A. KING, M.D., Washington, D. C., *Professor of Obstetrics, University of Vermont.*

D. W. YANDELL, M.D., *Professor of the Science and Art of Surgery and Clinical Surgery, University of Louisville, Ky.*

L. P. YANDELL, M.D., *Professor of Clinical Medicine, Diseases of Children, and Dermatology, University of Louisville, Ky.*

ROBT. BATTEY, M.D., Rome, Ga., *Emeritus Professor of Obstetrics, Atlanta Medical College; Ex-President Medical Association of Georgia.*

CLAUDE H. MASTIN, M.D., LL.D., Mobile, Ala.

PROF. JOHN ATTFIELD, Ph.D., F.R.S., F.I.C., F.C.S., London, Eng., *Professor of Practical Chemistry to the Pharmaceutical Society of Great Britain.*

For further particulars concerning Lactopeptine, the attention of the profession is respectfully directed to our 32-page pamphlet, which will be sent on application. 1297-1348eow

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574. Nos. 10 and 12 College Place, New York.

THE REPORTER FOR 1883.

We are prepared with a number of new and interesting features for the

MEDICAL AND SURGICAL REPORTER IN 1883.

Among these we may now announce a series of valuable **CLINICS**, carefully prepared, under the supervision of the gentlemen themselves, from

Prof. LOUIS A. SAYRE, New York City.
Prof. W. H. DRAPER, New York City.
Prof. A. C. POST, New York City.
Prof. J. M. DA COSTA, Philadelphia.
Prof. R. J. LEVIS, Philadelphia.
Prof. WM. GOODELL, Philadelphia.
Prof. D. HAYES AGNEW, Philadelphia.

And many other distinguished medical teachers.

A number of these have also agreed to send in **COMMUNICATIONS**, especially written for the REPORTER, on topics of interest to the general practitioner.

Regular **CORRESPONDENCE** from the principal European and American centres of medical study has been arranged for, and will prove an attractive feature during the year. It will be aimed especially to give early and accurate information of the novelties in medicine and surgery, and the news of the day of interest to the medical reader.

Our **REPORTS OF MEDICAL SOCIETIES** will in the future be yet more complete and prompt than in the past. Special representatives of the REPORTER will be present at all important meetings, and our facilities will in every respect equal those of any other journal published.

The feature of **SPECIAL REPORTS**, which has received much commendation from readers, will be paid increased attention, and those in 1883 will be found excellent summaries of all that the latest students have noted in their branches.

THE QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

Will hereafter take the place of the **Half-Yearly**. It will be furnished on the same terms as the Half-Yearly, although it will be larger, on better paper, and of more frequent issue.

It is the **ONLY** American Quarterly which takes cognizance and draws its material from **both Continents and all languages.** It is designed to be a **complete** representation of the progress of medical science every three months. No important fact will be omitted; no discovery overlooked. Especial and increased attention will hereafter be paid to **practical** medicine—to the great departments of

THERAPEUTICS AND MATERIA MEDICA,
DIAGNOSIS AND CLINICAL MEDICINE,
OPERATIVE SURGERY AND GYNECOLOGY.

TERMS: (in advance.)

The Medical and Surgical Reporter (weekly), one year,	**$5.00**
The Quarterly Compendium of Medical Science, one year,	**2.50**
The REPORTER and COMPENDIUM, taken together,	**6.00**
The Reporter, Compendium and Physician's Pocket Record, taken together,	**7.00**

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.
